

256Kx32 SSRAM/4Mx32 SDRAM External Memory Solution for Texas Instruments TMS320C6000 DSP

FEATURES

- Clock speeds:
 - SSRAM: 200, 166,150, and 133 MHz
 - SDRAMs: 125 and 100 MHz
- DSP Memory Solution
 - Texas Instruments TMS320C6201
 - Texas Instruments TMS320C6701
- Packaging:
 - 153 pin BGA, JEDEC MO-163
- 3.3V Operating supply voltage
- Direct control interface to both the SSRAM and SDRAM ports on the “C6x”
- Common address and databus
- 65% space savings vs. monolithic solution
- Reduced system inductance and capacitance

DESCRIPTION

The WED9LC6816V is a 3.3V, 256K x 32 Synchronous Pipeline SRAM and a 4Mx32 Synchronous DRAM array constructed with one 256K x 32 SBSRAM and two 4Mx16 SDRAM die mounted on a multilayer laminate substrate. The device is packaged in a 153 lead, 14mm by 22mm, BGA.

The WED9LC6816V provides a total memory solution for the Texas Instruments TMS320C6201 and the TMS320C6701 DSPs. The Synchronous Pipeline SRAM is available with clock speeds of 200, 166,150, and 133 MHz, allowing the user to develop a fast external memory for the SSRAM interface port.

The SDRAM is available in clock speeds of 125 and 100 MHz, allowing the user to develop a fast external memory for the SDRAM interface port.

The WED9LC6816V is available in both commercial and industrial temperature ranges.

PIN DESCRIPTION

A ₀₋₁₇	Address Bus
DQ ₀₋₃₁	Data Bus
SSCLK	SSRAM Clock
SSADC	SSRAM Address Status Control
SSWE	SSRAM Write Enable
SSOE	SSRAM Output Enable
SDCLK	SDRAM Clock
SDRAS	SDRAM Row Address Strobe
SDCAS	SDRAM Column Address Strobe
SDWE	SDRAM Write Enable
SDA ₁₀	SDRAM Address 10/auto precharge
BWE ₀₋₃	SSRAM Byte Write Enables SDRAM SDQM 0-3
SSCE	Chip Enable SSRAM Device
SDCE	Chip Enable SDRAM Device
V _{CC}	Power Supply pins, 3.3V
V _{CCQ}	Data Bus Power Supply pins, 3.3V (2.5V future)
V _{SS}	Ground
NC	No Contact

FIG. 2 BLOCK DIAGRAM

OUTPUT FUNCTIONAL DESCRIPTIONS

Symbol	Type	Signal	Polarity	Function
SSCLK	Input	Pulse	Positive Edge	The system clock input. All of the SSRAM inputs are sampled on the rising edge of the clock.
SSADS SSOE SSWE	Input	Pulse	Active Low	When sampled at the positive rising edge of the clock, \overline{SSADS} , \overline{SSOE} , and \overline{SSWE} define the operation to be executed by the SSRAM.
SSCE	Input	Pulse	Active Low	\overline{SSCE} disable or enable SSRAM device operation.
SDCLK	Input	Pulse	Positive Edge	The system clock input. All of the SDRAM inputs are sampled on the rising edge of the clock.
SDCE	Input	Pulse	Active Low	SDCE disable or enable device operation by masking or enabling all inputs except SDCLK and BWE ₀₋₃ .
SDRAS SDCAS SDWE	Input	Pulse	Active Low	When sampled at the positive rising edge of the clock, \overline{SDCAS} , \overline{SDRAS} , and \overline{SDWE} define the operation to be executed by the SDRAM.
A ₀₋₁₇ , SDA ₁₀	Input	Level	—	<p>Address bus for SSRAM and SDRAM</p> <p>A₀ and A₁ are the burst address inputs for the SSRAM</p> <p>During a Bank Active command cycle, A₀₋₁₁, SDA₁₀ defines the row address (RA₀₋₁₀) when sampled at the rising clock edge.</p> <p>During a Read or Write command cycle, A₀₋₇ defines the column address (CA₀₋₇) when sampled at the rising clock edge. In addition to the row address, SDA₁₀ is used to invoke Autoprecharge operation at the end of the Burst Read or Write Cycle. If SDA₁₀ is high, autoprecharge is selected and A₁₂ and A₁₃ define the bank to be precharged. If SDA₁₀ is low, autoprecharge is disabled.</p> <p>During a Precharge command cycle, SDA₁₀ is used in conjunction with A₁₂ and A₁₃ to control which bank(s) to precharge. If SDA₁₀ is high, all banks will be precharged regardless of the state of A₁₂ and A₁₃. If SDA₁₀ is low, then A₁₂ and A₁₃ are used to define which bank to precharge.</p>
DQ ₀₋₃₁	Input Output	Level	—	Data Input/Output are multiplexed on the same pins.
BWE ₀₋₃	Input	Pulse		BWE ₀₋₃ perform the byte write enable function for the SSRAM and DQM function for the SDRAM. BWE ₀ is associated with DQ ₀₋₇ , BWE ₁ with DQ ₈₋₁₅ , BWE ₂ with DQ ₁₆₋₂₃ and BWE ₃ with DQ ₂₄₋₃₁ .
V _{cc} , V _{ss}	Supply			Power and ground for the input buffers and the core logic.
V _{cca}	Supply			Data base power supply pins, 3.3V (2.5V future).

ABSOLUTE MAXIMUM RATINGS

Voltage on V _{CC} Relative to V _{SS}	-0.5V to +4.6V
V _{IN} (DQx)	-0.5V to V _{CC} +0.5V
Storage Temperature (BGA)	-55°C to +125°C
Junction Temperature	+150°C
Short Circuit Output Current	100 mA

*Stress greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions greater than those indicated in operational sections of this specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

RECOMMENDED DC OPERATING CONDITIONS

(V_{CC} = 3.3V -5% / +10% UNLESS OTHERWISE NOTED; 0°C ≤ T_A ≤ 70°C, COMMERCIAL; -40°C ≤ T_A ≤ 85°C, INDUSTRIAL)

Parameter	Symbol	Min	Max	Units
Supply Voltage (1)	V _{CC}	3.135	3.6	V
Input High Voltage (1,2)	V _{IH}	2.0	V _{CC} +0.3	V
Input Low Voltage (1,2)	V _{IL}	-0.3	0.8	V
Input Leakage Current 0 ≤ V _{IN} ≤ V _{CC}	I _{LI}	-10	10	μA
Output Leakage (Output Disabled) 0 ≤ V _{IN} ≤ V _{CC}	I _{LO}	-10	10	μA
SSRAM Output High (I _{OH} = -4mA) (1)	V _{OH}	2.4	—	V
SSRAM Output Low (I _{OL} = 8mA) (1)	V _{OL}	—	0.4	V
SDRAM Output High (I _{OH} = -2mA)	V _{OH}	2.4	—	V
SDRAM Output Low (I _{OL} = 2mA)	V _{OL}	—	0.4	V

NOTES:

- All voltages referenced to V_{SS} (GND).
- Overshoot: V_{IH} ≤ +6.0V for t ≤ t_{kc/2}
Underershoot: V_{IL} ≥ -2.0V for t ≤ t_{kc/2}

DC ELECTRICAL CHARACTERISTICS

(V_{CC} = 3.3V -5% / +10% UNLESS OTHERWISE NOTED; 0°C ≤ T_A ≤ 70°C, COMMERCIAL; -40°C ≤ T_A ≤ 85°C, INDUSTRIAL)

Description	Conditions	Symbol	Frequency	Typ	Max	Units
Power Supply Current: Operating (1,2,3)	SSRAM Active / DRAM Auto Refresh	I _{CC1}	133MHz	500	625	mA
			150MHz	500	650	
			166MHz	550	700	
			200MHz	600	800	
Power Supply Current Operating (1,2,3)	SSRAM Active / DRAM Idle	I _{CC2}	133MHz	325	425	mA
			150MHz	350	450	
			166MHz	400	495	
			200MHz	450	585	
Power Supply Current Operating (1,2,3)	SSRAM Active / SSRAM Idle	I _{CC3}	83MHz	500	625	mA
			100MHz	500	650	
			125MHz	550	700	
CMOS Standby	SSCE and SDCE ≤ V _{CC} -0.2V, All other inputs at V _{SS} +0.2 ≤ V _{IN} or V _{IN} ≤ V _{CC} -0.2V, Clk frequency = 0	I _{SB1}		20.0	40.0	mA
TTL Standby	SSCE and SDCE ≤ V _{IH} min All other inputs at V _{IL} max ≤ V _{IN} or V _{IN} ≤ V _{CC} -0.2V, Clk frequency = 0	I _{SB2}		30.0	55.0	mA
Auto Refresh		I _{CC5}		250	300	mA

NOTES:

- I_{CC} (operating) is specified with no output current. I_{CC} (operating) increases with faster cycle times and greater output loading.
- "Device idle" means device is deselected (CE = V_{IH}) Clock is running at max frequency and Addresses are switching each cycle.
- Typical values are measured at 3.3V, 25°C. I_{CC} (operating) is specified at specified frequency.

BGA CAPACITANCE

Description	Conditions	Symbol	Typ	Max	Units
Address Input Capacitance (1)	T _A = 25°C; f = 1MHz	C _I	5	8	pF
Input/Output Capacitance (DQ) (1)	T _A = 25°C; f = 1MHz	C _O	8	10	pF
Control Input Capacitance (1)	T _A = 25°C; f = 1MHz	C _A	5	8	pF
Clock Input Capacitance (1)	T _A = 25°C; f = 1MHz	C _{CK}	4	6	pF

NOTE:

- This parameter is sampled.

SSRAM AC CHARACTERISTICS

(VCC = 3.3V -5% / +10% UNLESS OTHERWISE NOTED; 0°C ≤ TA ≤ 70°C, COMMERCIAL; -40°C ≤ TA ≤ 85°C, INDUSTRIAL)

SSRAM OPERATION TRUTH TABLE

Operation	Address Used	\overline{SSCE}	\overline{SSADS}	\overline{SSWE}	\overline{SSOE}	DQ
Deselected Cycle, Power Down	None	H	L	X	X	High-Z
WRITE Cycle, Begin Burst	External	L	L	L	X	D
READ Cycle, Begin Burst	External	L	L	H	L	Q
READ Cycle, Begin Burst	External	L	L	H	H	High-Z
READ Cycle, Suspend Burst	Current	X	H	H	L	Q
READ Cycle, Suspend Burst	Current	X	H	H	H	High-Z
READ Cycle, Suspend Burst	Current	H	H	H	L	Q
READ Cycle, Suspend Burst	Current	H	H	H	H	High-Z
WRITE Cycle, Suspend Burst	Current	X	H	L	X	D
WRITE Cycle, Suspend Burst	Current	H	H	L	X	D

NOTE:

1. X means "don't care", H means logic HIGH. L means logic LOW.
2. All inputs except SSOE must meet setup and hold times around the rising edge (LOW to HIGH) of SSCLK.
3. Suspending burst generates wait cycle
4. For a write operation following a read operation, \overline{SSOE} must be HIGH before the input data required setup time plus High-Z time for \overline{SSOE} and staying HIGH through out the input data hold time.
5. This device contains circuitry that will ensure the outputs will be in High-Z during power-up.

			1		2		1		

NOTES:

- Parameters depend on programmed CAS latency.
- If clock rise time is longer than 1ns ($t_{rise}/2 - 0.5$)ns should be added to the parameter.
- Assumed input rise and fall time = 1ns. If t_{rise} or t_{fall} are longer than 1ns. $[(t_{rise} + t_{fall})/2] - 1$ ns should be added to the parameter.
- The minimum number of clock cycles required is determined by dividing the minimum time required by the clock cycle time and then rounding up to the next higher integer.
- Minimum delay is required to complete write.
- All devices allow every cycle column address changes.
- In case of row precharge interrupt, auto precharge and read burst stop.
- A new command may be given t_{RFC} after self-refresh exit.

CLOCK FREQUENCY AND LATENCY PARAMETERS - 125MHz SDRAM
(UNIT = NUMBER OF CLOCK)

Frequency	CAS Latency	trc 70ns	trAS 50ns	trP 20ns	trRD 20ns	trCD 20ns	tCCD 10ns	tCDL 10ns	trDL 10ns
125MHz (8.0ns)	3	9	6	3	2	3	1	1	1
100MHz (10.0ns)	3	7	5	2	2	2	1	1	1
83MHz (12.0ns)	2	6	4	2	2	2	1	1	1

CLOCK FREQUENCY AND LATENCY PARAMETERS - 100MHz SDRAM
(UNIT = NUMBER OF CLOCK)

Frequency	CAS Latency	trc 70ns	trAS 50ns	trP 20ns	trRD 20ns	trCD 20ns	tCCD 10ns	tCDL 10ns	trDL 10ns
100MHz (12.0ns)	3	7	5	2	2	2	1	1	1
83MHz (12.0ns)	2	6	5	2	2	2	1	1	1

REFRESH CYCLE PARAMETERS

Parameter	Symbol	-10		-12		Units
		Min	Max	Min	Max	
Refresh Period (1,2)	tREF	—	64	—	64	ms

NOTES:

- 4096 cycles
- Any time that the Refresh Period has been exceeded, a minimum of two Auto (CBR) Refresh commands must be given to "wake-up" the device.

SDRAM COMMAND TRUTH TABLE

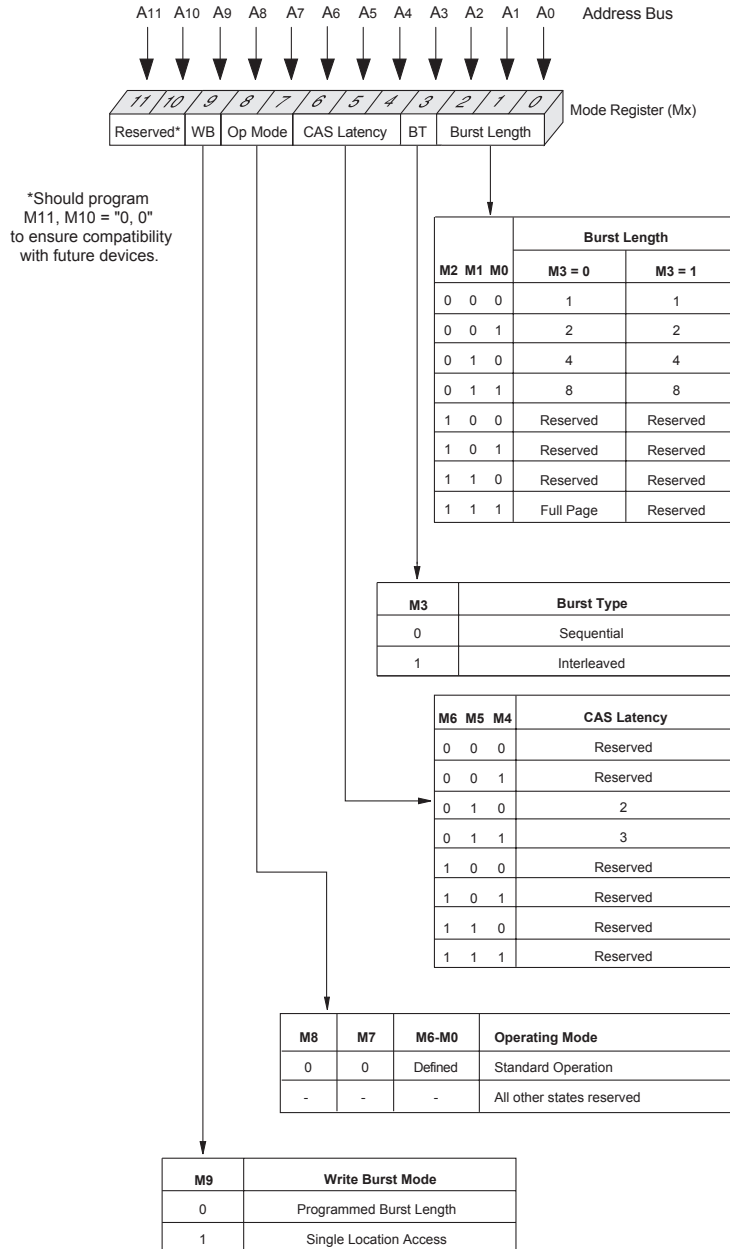

Function	SDCE	SDRAS	SDCAS	SDWE	BWE	A12, A13	SDA10 A11-0	Notes
Mode Register Set	L	L	L	L	X	OP CODE

Data Write/Output Disable	X	X	X	X	L	X	X	4
Data Mask/Output Disable	X	X	X	X	H	X	X	4

NOTES:

- All of the SDRAM operations are defined by states of SDCE\, SDWE\, SDRAS\, SDCAS\, and BWE₀₋₃ at the positive rising edge of the clock.
- Bank Select (BA), A12 (BA0) and A13 (BA1) select between different banks.
- During a Burst Write cycle there is a zero clock delay, for a Burst Read cycle the delay is equal to the CAS latency.
- The BWE has two functions for the data DQ Read and Write operations. During a Read cycle, when BWE goes high at a clock timing the data outputs are disabled and become high impedance after a two clock delay. BWE also provides a data mask function for Write cycles. When it activates, the Write operation at the clock is prohibited (zero clock latency).

	L	H	H	L	X	X	Burst Termination	ILLEGAL	
L	H	H	H	X	X	No Operation	No Operation; Idle after two clock cycles		
H	X	X	X	X	X	Device Deselect	No Operation; Idle after two clock cycles		

NOTES:

- Both Banks must be idle otherwise it is an illegal action.
- The Current State refers only refers to one of the banks, if BA selects this bank then the action is illegal. If BA selects the bank not being referenced by the Current State then the action may be legal depending on the state of that bank.
- The minimum and maximum Active time (t_{RA}S) must be satisfied.
- The RAS to CAS Delay (t_{RC}D) must occur before the command is given.
- Address SDA₁₀ is used to determine if the Auto Precharge function is activated.
- The command must satisfy any bus contention, bus turn around, and/or write recovery requirements. The command is illegal if the minimum bank to bank delay time (t_{RR}D) is not satisfied.

FIG. 5 SDRAM SINGLE BIT READ-WRITE-READ CYCLE (SAME PAGE) @ CAS LATENCY = 3, BURST LENGTH = 1

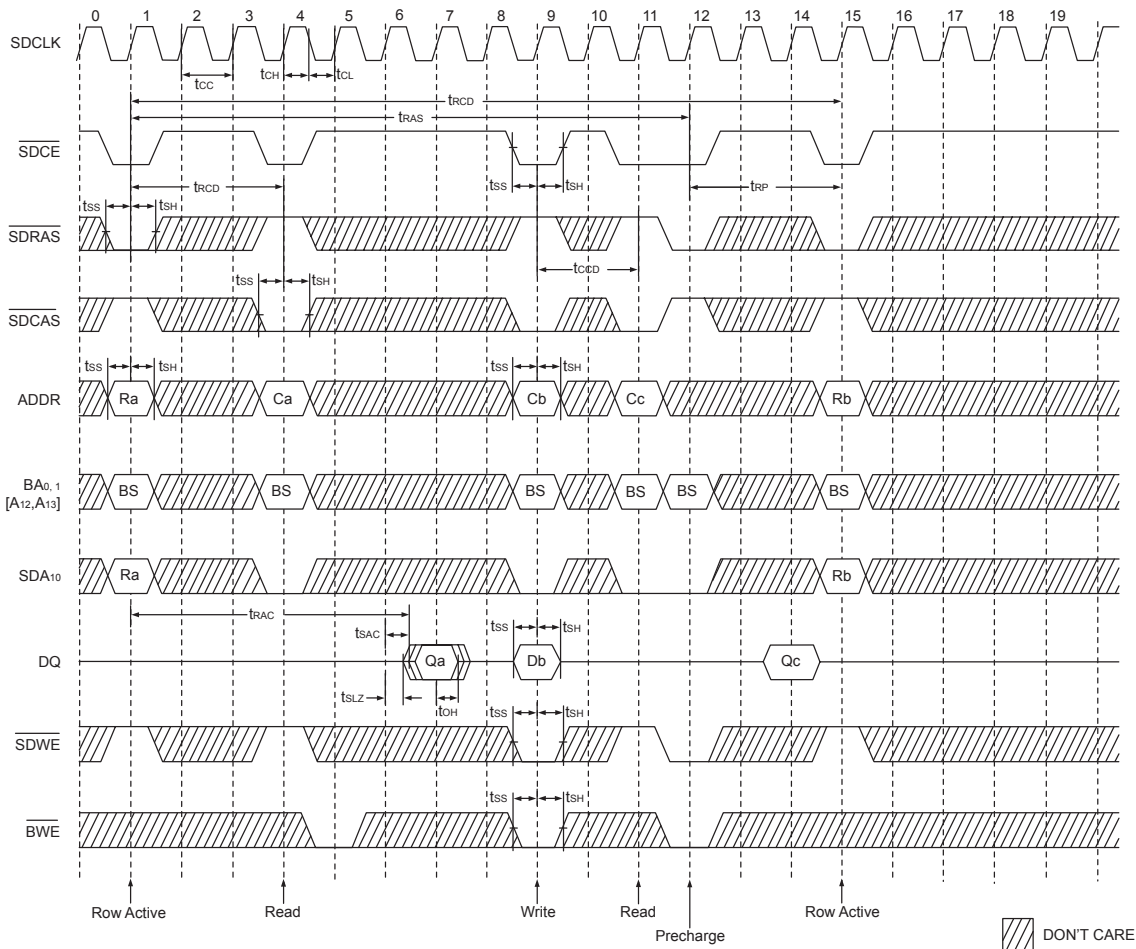

FIG. 6 SDRAM POWER UP SEQUENCE

FIG. 7 SDRAM READ & WRITE CYCLE AT SAME BANK @ BURST LENGTH = 4

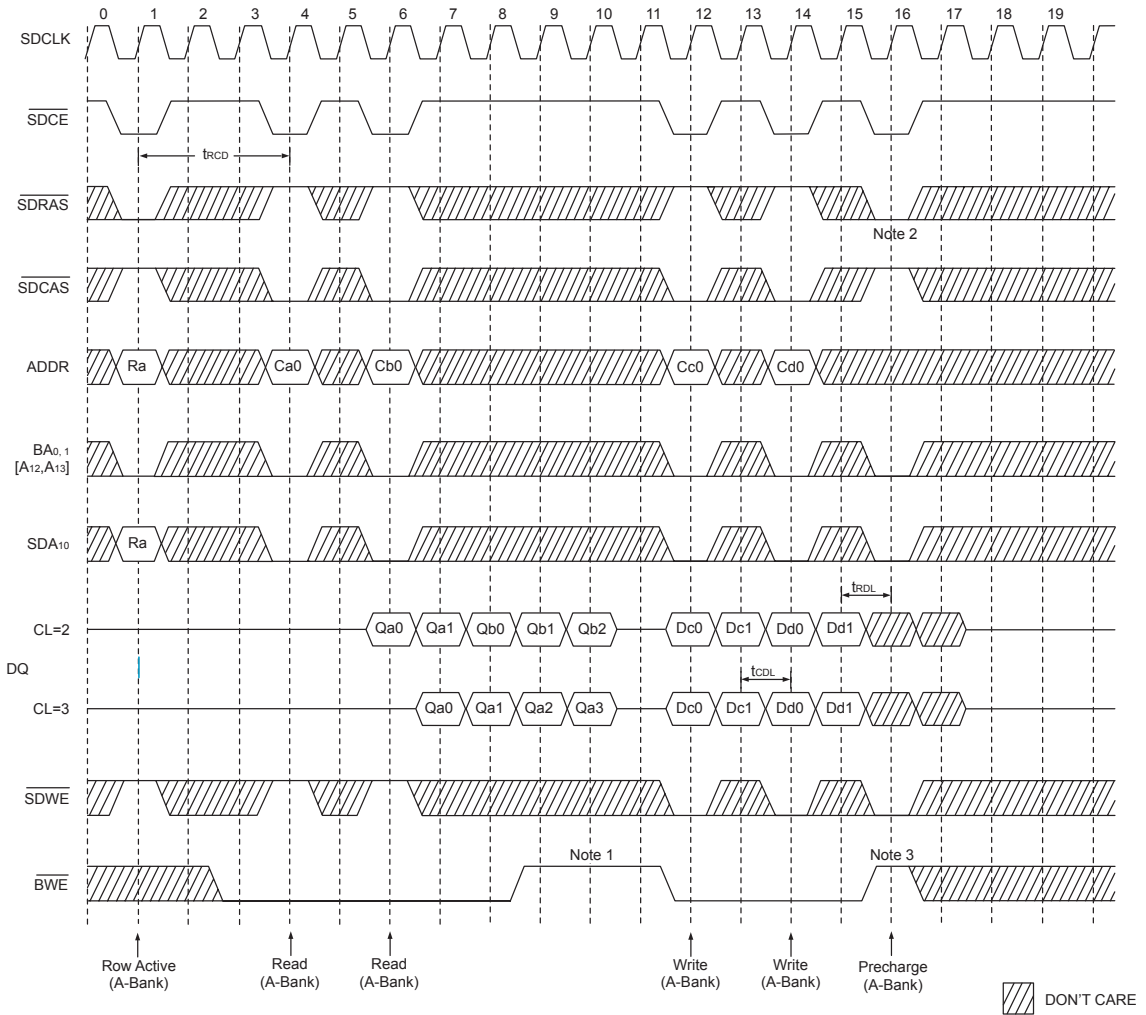

NOTES:

1. Minimum row cycle times are required to complete internal DRAM operation.
2. Row precharge can interrupt burst on any cycle. (CAS Latency - 1) number of valid output data is available after Row precharge. Last valid output will be Hi-Z (t_{shz}) after the clock.
3. Access time from Row active command. $t_{cc} * (t_{rCD} + CAS\ Latency - 1) + t_{sac}$.
4. Output will be Hi-Z after the end of burst. (1, 2, 4, 8 & Full page bit burst)

FIG. 8 SDRAM PAGE READ & WRITE CYCLE AT SAME BANK @ BURST LENGTH = 4

NOTES:

1. To write data before burst read ends, \overline{BWE} should be asserted three cycle prior to write command to avoid bus contention.
2. Row precharge will interrupt writing. Last data input, t_{RD} before Row precharge will be written.
3. \overline{BWE} should mask invalid input data on precharge command cycle when asserting precharge before end of burst. Input data after Row precharge cycle will be masked internally.

FIG. 9 SDRAM PAGE READ CYCLE AT DIFFERENT BANK @ BURST LENGTH = 4

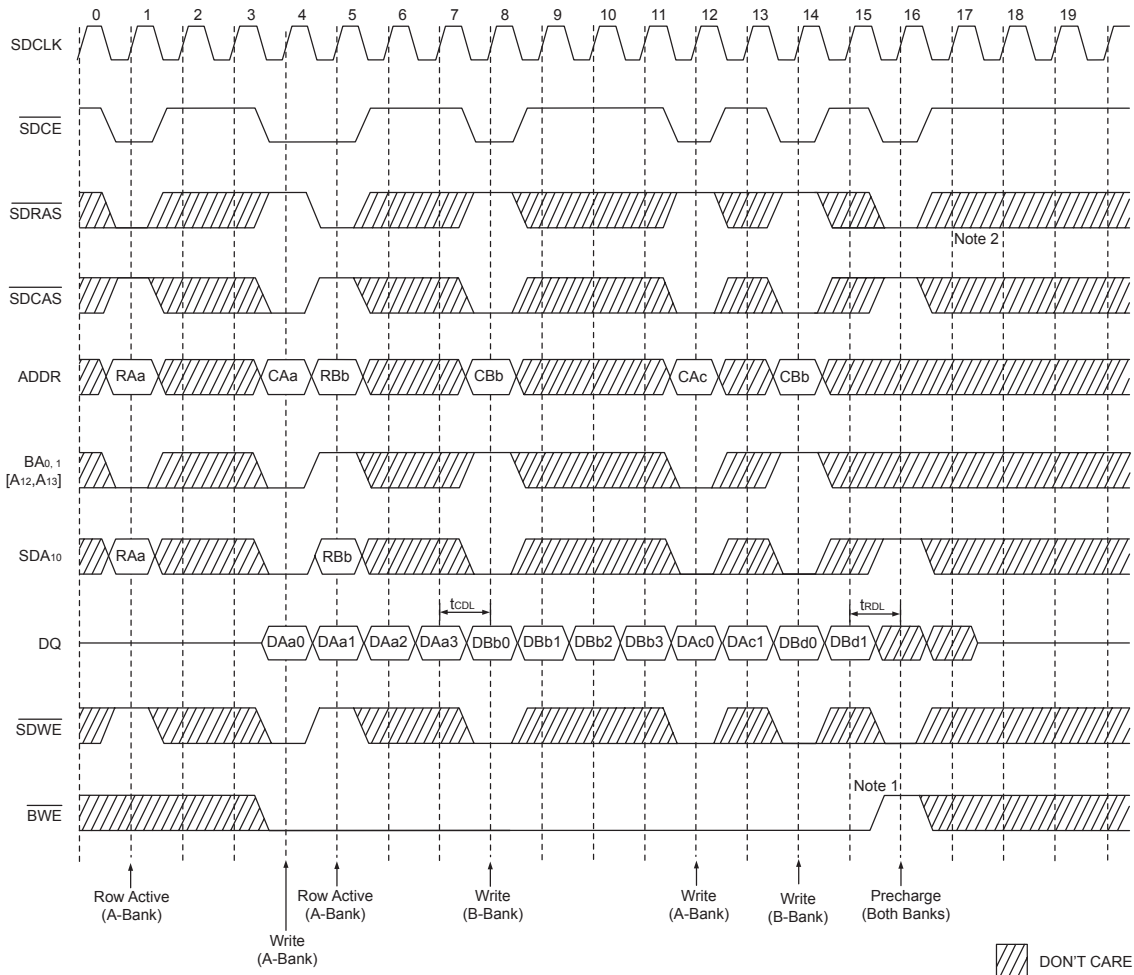

NOTES:

1. \overline{SDCE} can be "don't care" when \overline{SDRAS} , \overline{SDCAS} and \overline{SDWE} are high at the clock going high edge.
2. To interrupt a burst read by Row precharge, both the read and the precharge banks must be the same.

FIG. 10 SDRAM PAGE WRITE CYCLE AT DIFFERENT BANK @ BURST LENGTH = 4

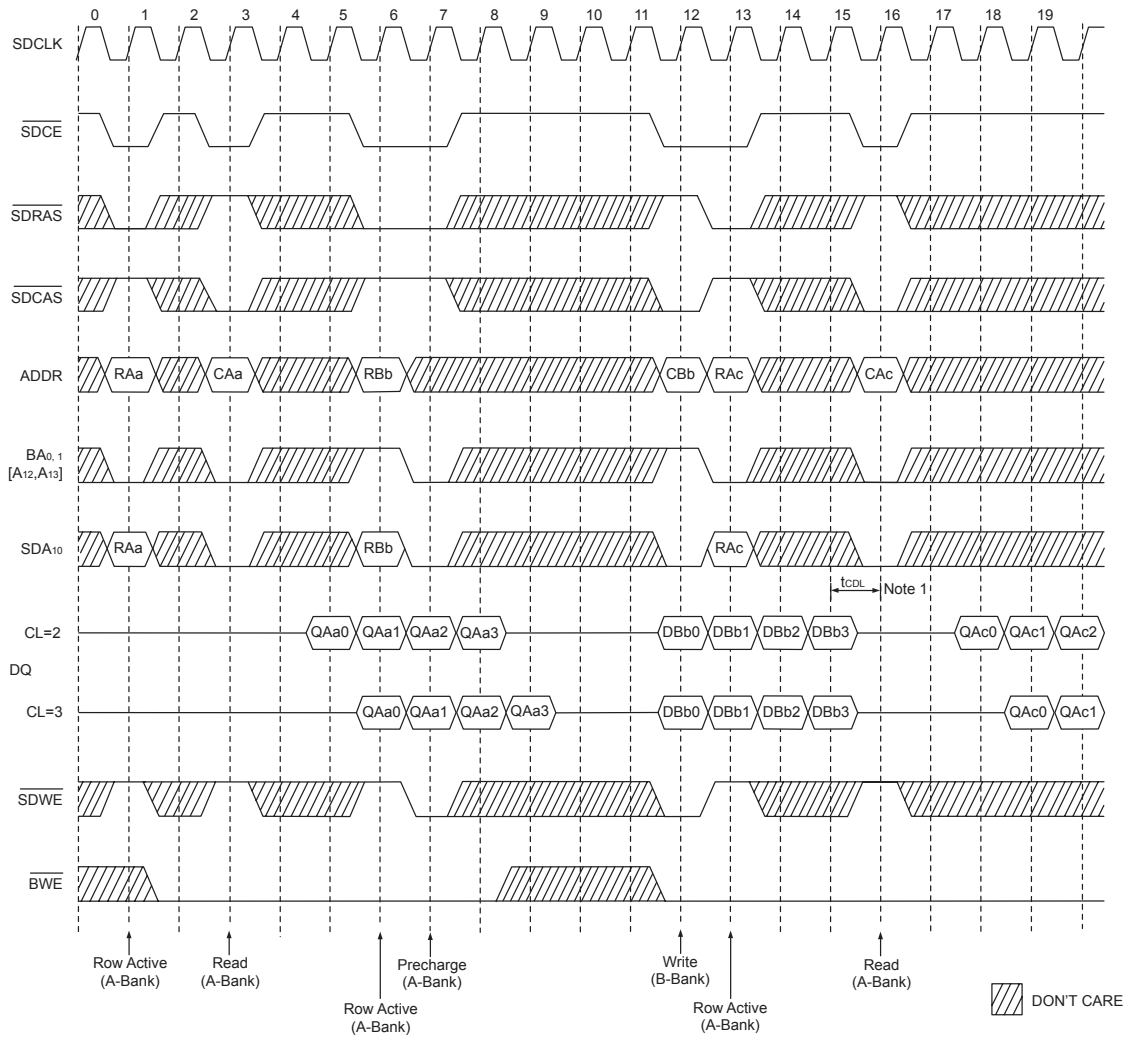

NOTES:

1. To interrupt burst write by Row precharge, \overline{BWE} should be asserted to mask invalid input data.
2. To interrupt a burst read by Row precharge, both the read and the precharge banks must be the same.

FIG. 11 SDRAM READ & WRITE CYCLE AT DIFFERENT BANK @ BURST LENGTH = 4

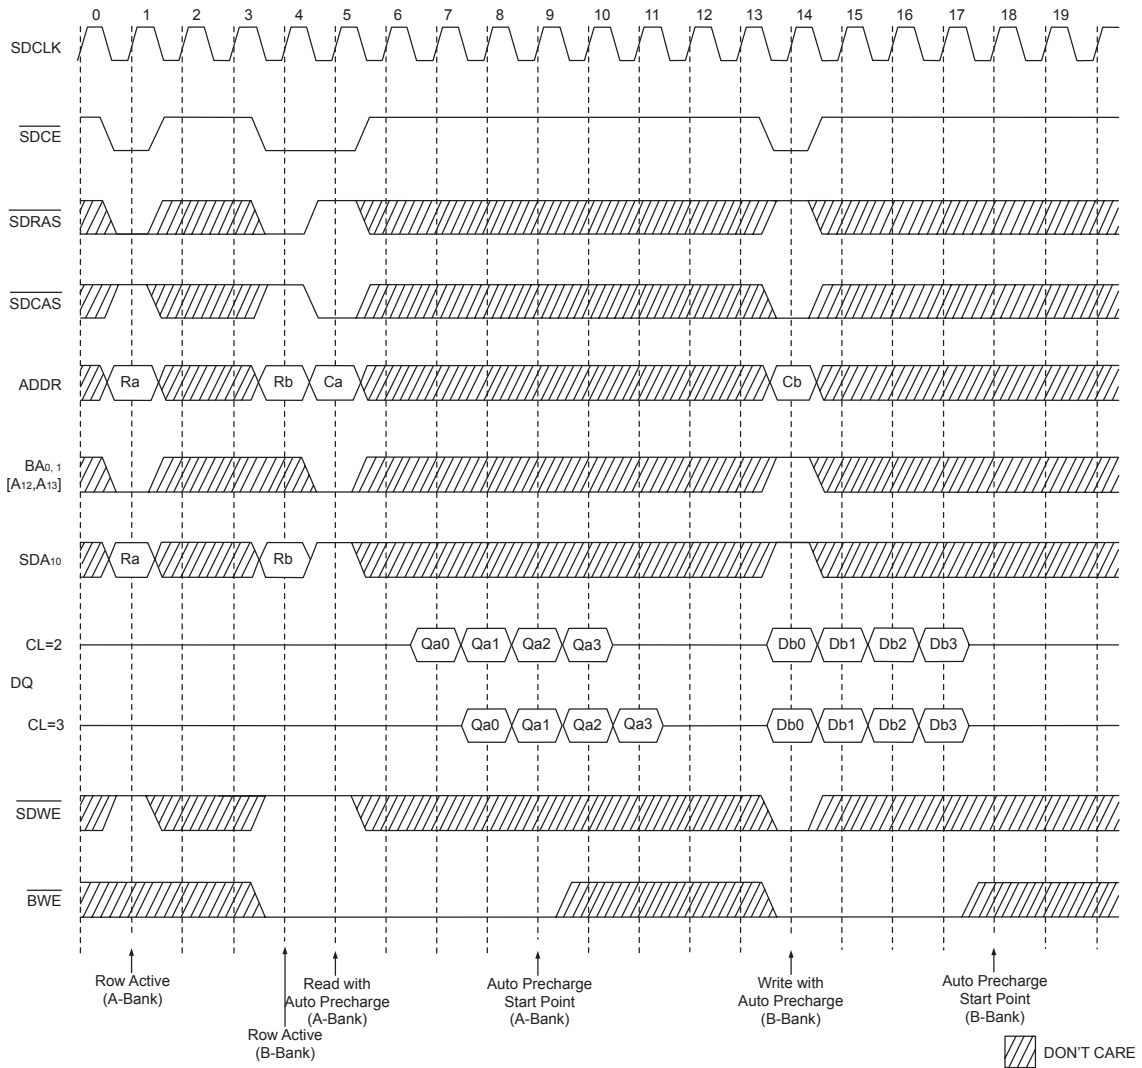

NOTES:

1. t_{CDL} should be met to complete write.

FIG. 12 SDRAM READ & WRITE CYCLE WITH AUTO PRECHARGE @ BURST LENGTH = 4

NOTES:

1. *t_{CDL}* should be controlled to meet minimum *t_{RAS}* before internal precharge start. (In the case of Burst Length = 1 & 2 and BRSW mode)

FIG. 13 SDRAM READ INTERRUPTED BY PRECHARGE COMMAND & READ BURST STOP @ BURST LENGTH = FULL PAGE

NOTES:

1. At full page mode, burst is end at the end of burst. So auto precharge is possible.
2. About the valid DQs after burst stop, it is the same as the case of SDRAS interrupt. Both cases are illustrated in the above timing diagram. See the label 1, 2 on each of them. But at burst write, burst stop and SDRAS interrupt should be compared carefully. Refer to the timing diagram of "Full page write burst stop cycle".
3. Burst stop is valid at every burst length.

FIG. 14 SDRAM WRITE INTERRUPTED BY PRECHARGE COMMAND & WRITE BURST STOP @ BURST LENGTH = FULL PAGE

NOTES:

1. At full page mode, burst is end at the end of burst. So auto precharge is possible.
2. Data-in at the cycle of interrupted by precharge can not be written into the corresponding memory cell. It is defined by AC parameter of trDL. BWE at write interrupt by precharge command is needed to prevent invalid write. BWE should mask invalid input data on precharge command cycle when asserting precharge before end of burst. Input data after Row precharge cycle will be masked internally.
3. Burst stop is valid at every burst length.

FIG. 15 SDRAM BURST READ SINGLE BIT WRITE CYCLE @ BURST LENGTH = 2

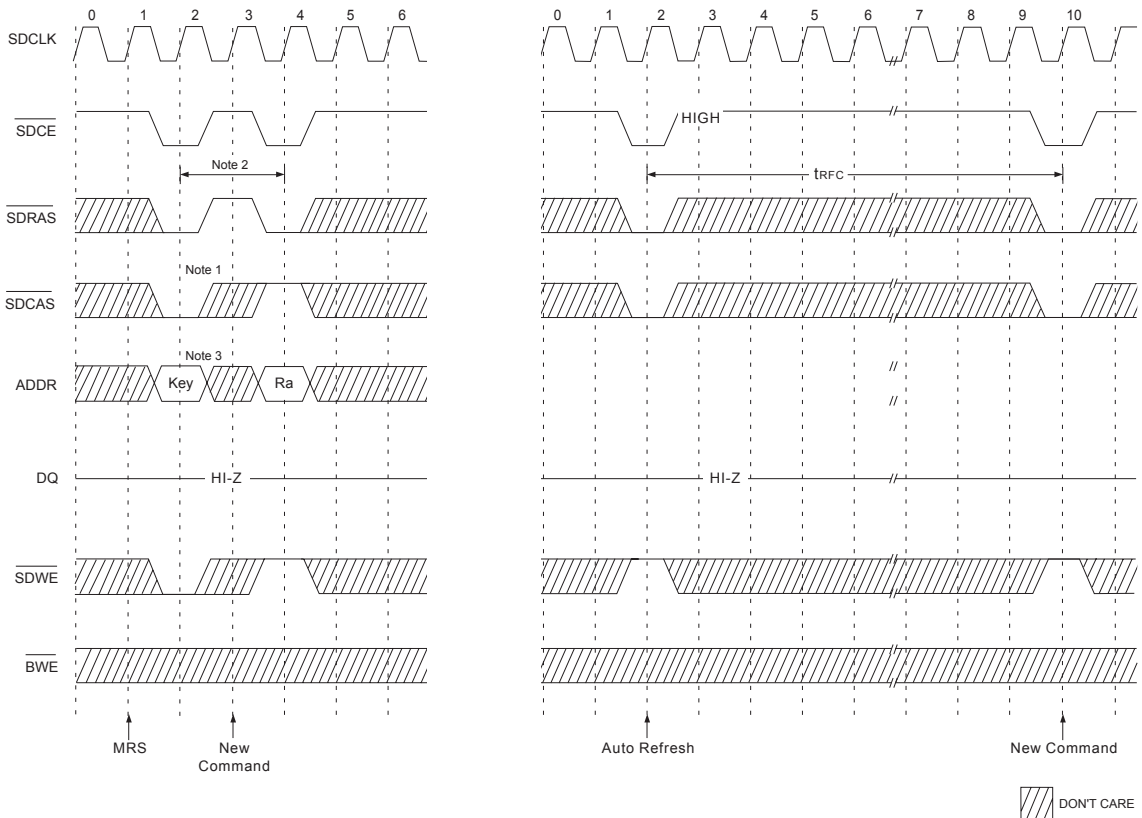

NOTES:

1. BRSW modes enabled by setting A9 "High" at MRS (Mode Register Set).
At the BRSW Mode, the burst length at Write is fixed to "1" regardless of programmed burst length.
2. When BRSW write command with auto precharge is executed, keep in mind that tRAS should not be violated. Auto precharge is executed at the burst-end cycle, so in the case of BRSW write command, the next cycle starts the precharge.

FIG. 16
SDRAM MODE REGISTER
SET CYCLE

SDRAM AUTO REFRESH CYCLE

*Both banks precharge should be completed before Mode Register Set cycle and Auto refresh cycle.

NOTES:

MODE REGISTER SET CYCLE

1. SDCE, SDRAS, SDCAS & SDWE activation at the same clock cycle with address key will set internal mode register.
2. Minimum 2 clock cycles should be met before new SDRAS activation.
3. Please refer to Mode Register Set Table.

**PACKAGE DESCRIPTION: 153 LEAD BGA (17 X 9 BALL ARRAY)
JEDEC MP-163**

ALL LINEAR DIMENSIONS ARE MILLIMETERS AND PARENTHETICALLY IN INCHES

NOTE:

Ball attach pad for above BGA package is 480 microns in diameter. Pad is solder mask defined.
