

# SPC21A1 20KB SOUND CONTROLLER

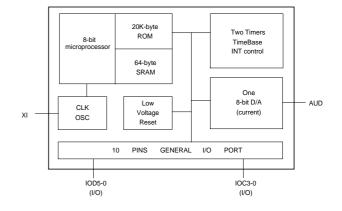

### **GENERAL DESCRIPTION**

The SPC21A1 is a CPU based two-channel speech/melody synthesizer including CMOS 8-bit microprocessor with 69 instructions, 20K-byte ROM for speech and melody data (Speech is compressed by a 4-bit ADPCM with approx. 6 sec speech duration @ 7KHz sampling rate) and 64-byte working SRAM. It includes two Timer/Counters, 10 Software Selectable I/Os, and one 8-bit current D/A output. For audio processing, melody and speech can be mixed into one output. It operates over a wide voltage range of 2.4V - 5.5V and includes Low Voltage Reset function. The Low Voltage Reset automatically resets when the working voltage is less than 2.2V. In addition, SPC21A1 has a Clock Stop mode for power savings. The power savings mode saves the RAM contents, but freezes the oscillator, causing all other chip functions to be inoperative. The Max. CPU clock frequency is 6.0MHz. It has an Instruction Cycle Rate of 2 clock cycles (min.) – 6 clock cycles (max.). The SPC21A1 includes, not only the latest technology, but also the full commitment and technical support of Sunplus.

### FEATURES

- 8-bit microprocessor
- Provides 20K-byte ROM for program and audio data
- 64-byte working SRAM
- Software-based audio processing
- Wide operating voltage: 2.4V 3.4V @ 4.0MHz 3.6V – 5.5V @ 6.0MHz
- Supports Rosc only
- Max. CPU clock: 4.0MHz @ 3V, 6.0MHz @ 5V
- Standby mode (Clock Stop mode) for power Savings. Max. 2μA @ 5V
- 500ns instruction cycle time @ 4.0MHz CPU clock
- Provides 10 general I/Os
- Two 12-bit timer/counters
- 6 INT sources
- Key wake -up function
- Approx. 6 sec speech
  - @ 7KHz sampling rate with ADPCM
- One D/A output
- Low Voltage Reset

### **BLOCK DIAGRAM**

### **APPLICATION FIELD**

- Intelligent education toys
  - Ex. Pattern to voice (animal, car, color, etc.)

Spelling (English or Chinese) Math

- High end toy controller
- Talking instrument controller
- General speech synthesizer
- Industrial controller

### **FUNCTION DESCRIPTIONS**

### ■ CPU

The SPC21A1 8-bit microprocessor is a high performance processor equipped with Accumulator, Program Counter, X Register, Stack pointer and Processor Status Register (this is the same as the 6502 instruction structure). SPC21A1 is able to perform with 6.0MHz (max.) depending on the application specifications.

### ■ ROM AREA

The SPC21A1 provides a 20K-byte ROM that can be defined as the program area, audio data area, or both.

### RAM AREA

The SPC21A1 total RAM consists of 64-bytes (including Stack) at locations from \$C0 through \$FF.

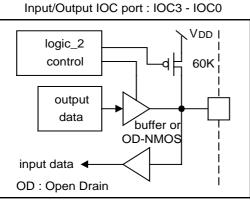

### MAP OF MEMORY AND I/Os

\*I/O PORT: - PORT IOC \$0004 \$00000 IOD \$0005 Hardware register, I/Os - I/O CONFIG \$0000 \$000C0 USER RAM and STACK \$0001 \*NMI SOURCE: \$00100 - INTA (from TIMER A) UNUSED \$00200 \*INT SOURCE: SUNPLUS TEST PROGRAM - INTA (from TIMER A) \$00600 - INTB (from TIMER B) **USER'S PROGRAM &** DATA AREA - CPU CLK / 1024 \$03FFF - CPU CLK / 8192 **DUMMY AREA** - CPU CLK / 65536 \$07000 - EXT INT **USER'S PROGRAM &** DATA AREA \$07FFF

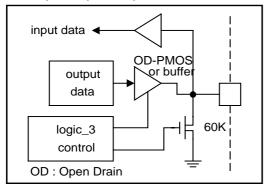

\*MEMORY MAP (From ROM view)

### ■ I/O PORT CONFIGURATION\*

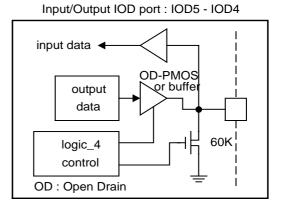

Input/Output IOD port : IOD3 - IOD0

\*Values shown are for VDD = 5.0V test conditions only.

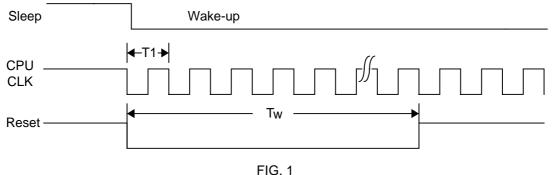

### ■ POWER SAVINGS MODE

The SPC21A1 provides a power savings mode (Standby mode) for those applications that require very low stand-by current. To enter standby mode, the Wake-Up Register should be enabled and then stop the CPU clock by writing the STOP CLOCK Register. The CPU will then go to the stand-by mode. In such a mode, RAM and I/Os will remain in their previous states until being awakened. Port IOD7-0 is the only wake-up source in the SPC21A1. After the SPC21A1 is awakened, the internal CPU will go to the RESET State (Tw  $\geq$  65536 x T1) and then continue processing the program. Wakeup Reset will not affect RAM or I/Os (FIG.1).

 $T1 = 1 / (F_{CPU}), Tw \ge 65536 \times T1$ 

### ■ LOW VOLTAGE RESET

The SPC21A1 includes a Low Voltage Reset (LVR) function. Below the minimum power-supply voltage of 2.2V, the CPU system will become unstable and malfunction. Low Voltage Reset will reset all functions into the initial operational (stable) state if the VDD power-supply voltage drops below 2.2V (FIG.2).

(The LVR function is the same as Power ON Reset or External Reset.)

FIG. 2

### TIMER/COUNTER

The SPC21A1 contains two 12-bit timer/counters, TMA and TMB respectively. TMA can be specified as a timer or a counter, but TMB can only be used as a timer. In the timer mode, TMA and TMB are re-loaded upcounters. When timer overflows from \$0FFF to \$0000, the carry signal will make the timer automatically reload to the user's pre-set value and be up-counted again. At the same time, the carry signal will generate the INT signal if the corresponding bit is enabled in the INT ENABLE Register. If TMA is specified as a counter, users can reset by loading #0 into the counter. After the counter has been activated, the value of the counter can also be read from the counters at the same time. The read instruction will not affect the value of the counter or reset it.

	Timer/Counter	Clock Source	
ТМА	12-BIT TIMER	CPU CLOCK (T) or T/4	
	12-BIT COUNTER	T/64, T/8192, T/65536 or EXT CLK	
ТМВ	12-BIT TIMER	T or T/4	
MODE SELECT REGISTER		TMA only, select timer or counter	
TIMER CLOCK SELECTOR		Select T or T/4	

Clock source of Timer/Counter can be selected as follows:

### ■ SPEECH AND MELODY

Since the SPC21A1 provides a large ROM and wide range of CPU operation speeds, it is most suitable for speech and melody synthesis.

For speech synthesis, the SPC21A1 can provide NMI for accurate sampling frequency. Users can record or synthesize the sound and digitize it into the ROM. The sound data can be played back in the sequence of the control functions as designed by the user's program. Several algorithms are recommended for high fidelity and compression of sound including PCM, LOG PCM, and ADPCM.

For melody synthesis, the SPC21A1 provides the dual tone mode. After selecting the dual tone mode, users only need to fill either TMA or TMB, or both TMA and TMB to generate expected frequency for each channel. The hardware will toggle the tone wave automatically without entering into an interrupt service routine. Users are able to simulate musical instruments or sound effects by simply controlling the envelope of tone output.

### **PIN DESCRIPTION\***

Mnemonic	PIN No.	Туре	Description
VDD	8	Ι	Supply voltage input
VSS	7		Ground
XI	9	I	Oscillator crystal input or RESISTOR (Resistor should be connected
			to VDD)
RESET	2	I	RESET
TEST	11	I	TEST MODE
AUD	10	0	AUDIO OUTPUT
			Port C is an 4-bit bi-directional programmable Input / Output port with
IOC0	6	I/O	Pull-high or Open-drain option. As inputs, Port C can be in either
IOC1	5	I/O	the Pure or Pull-high states. As outputs Port C can be a Buffer or
IOC2	4	I/O	Open-drain NMOS type (sink current).
IOC3	3	I/O	IOC1:EXT INT IN
			IOC2:EXT COUNT IN
			**See note 1 and 2 below.
			Port D is an 6-bit bi-directional programmable Input / Output port with
IOD0	17	I/O	Pull-low or Open-drain option. As inputs, Port D can be either Pure
IOD1	16	I/O	or Pull-low states. As outputs, Port D can be either Buffer or Open-
IOD2	15	I/O	drain PMOS type (send current).
IOD3	14	I/O	(Key change, Wake up I/O)
IOD4	13	I/O	
IOD5	12	I/O	**See note 1 and 2 below.

\* Refer to SPC Programming Guide for complete information.

\*\*Note: 1.) Two input states can be specified; Pure Input, Pull-High or Pull Low.

2.) Three output states can be specified as Buffer output, Open Drain PMOS output (send), or Open Drain NMOS output (sink).

### ABSOLUTE MAXIMUM RATINGS

Characteristics	Symbol	Ratings
DC Supply Voltage	V+	< 7V
Input Voltage Range	Vin	-0.5V to V+ + 0.5V
Operating Temperature	TA	0°C to +60°C
Storage Temperature	Тѕто	-50℃ to +150℃

Note: Stresses beyond those given in the Absolute Maximum Rating table may cause operational errors or damage to the device. For normal operational conditions see AC/DC Electrical Characteristics.

## AC CHARACTERISTICS (TA = 25 $^{\circ}$ C)

	Symbol	Limit				
Characteristics		Min.	Тур.	Max.	Unit	Test Condition
	Fosc2	_	2.0	4.0	MHz	VDD = 3V
OSC Frequency		-	4.0	6.0	MHz	VDD = 5V

### DC CHARACTERISTICS (TA = 25 °C, VDD = 3 V)

	Symbol	Limit			11	Tast Osm litism
Characteristics		Min.	Тур.	Max.	Unit	Test Condition
Operating Voltage	Vdd	2.4	-	3.4	V	For 2-battery
Operating Current	ЮР	-	1.5	2.0	mA	FCPU = 3.0MHz @ 3V, no load
Standby Current	ISTBY	-	-	2.0	μA	VDD = 3V
Audio output current	AUD	-	-1.5	-	mA	VDD = 3V,one-channel
Input High Level	Vін	2.0	-	-	V	VDD = 3V
Input Low Level	VIL	-	-	0.8	V	VDD = 3V
Output High I						VDD = 3V

# APPLICATION CIRCUIT NOTE

### ■ Current Mode DAC Speaker Driver

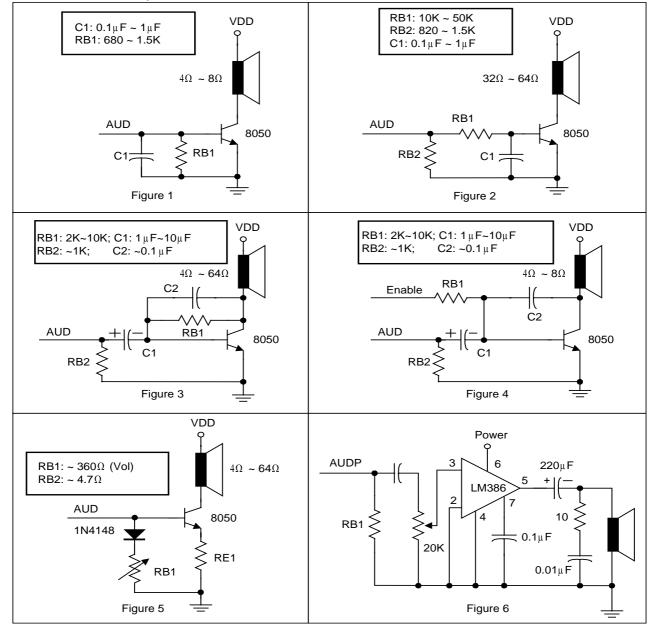

Figure 1: The simplest CKT uses with low impedance speaker. It has high operation current, but low cost.

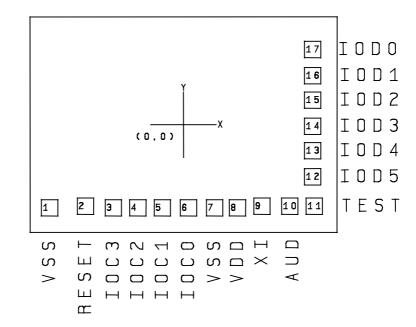

Figure 2: It is the same as Figure 1 but a high impedance speaker is used.

- Figure 3: The CKT contains a low pass filter. It is capable of providing higher speech quality, but it takes higher operation current.
- Figure 4:Improved version of Figure 3. The standby current can be controlled by the enable pin.
- Figure 5: The current mirror mode. It is able to control the volume. In addition, it is more stable and has lower operation current than Figure 1-3.
- Figure 6: High quality, low operation current CKT, but more expensive.

### PAD ASSIGNMENT AND LOCATIONS

### PAD Assignment

 $\label{eq:chip} Chip \; Size: 1980 \mu m \; x \; 1420 \mu m$  This IC substrate should be connected to VSS

Note: To ensure that the IC functions properly, bond all VDD, VSS, AVDD and AVSS pins.

### **Ordering Information**

Product Number	Package Type		
SPC21A1-nnnnV-C	Chip form		

Note1: Code number (nnnnV) is assigned for customer.

Note2: Code number (nnnn = 0000 - 9999); version (A = A - Z).

NOTE: SUNPLUS TECHNOLOGY CO., LTD reserves the right to make changes at any time without notice in order to improve the design and performance and to supply the best possible product.

### PAD Locations
