

LA4636

For General Audio Use 11 W 2-Channel BTL AF Power Amplifier

Overview

The LA4636 is a BTL power IC that is pin-compatible with the LA4635A and LA4635B single-end power ICs. It represents a new concept in devices of this type by allowing design editing based on common circuit board pin compatibility for products of different power ranks. The LA4636 also incorporates several protection circuits.

Package Dimensions

unit: mm

3049B-SIP12H

Specifications

Maximum Ratings at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	$V_{CC \text{ max}}$	No signal	24	V
Maximum output current	$I_o \text{ peak}$	Per channel	2.5	A
Allowable power dissipation	$P_d \text{ max}$	Infinite heat sink	25	W
Operating temperature	T_{opr}		-20 to +75	$^\circ\text{C}$
Storage temperature	T_{stg}		-40 to +150	$^\circ\text{C}$

Operating Conditions at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Recommended supply voltage	V_{CC}		12	V
Recommended load resistance	$R_L \text{ op}$		4 to 8	Ω
Allowable operating voltage range *1	$V_{CC \text{ op}}$	$R_L = 8 \Omega$	5.5 to 20	V
		$R_L = 6 \Omega$	5.5 to 17	V
		$R_L = 4 \Omega$	5.5 to 13	V

Set V_{CC} , R_L , and output level such that $P_d \text{ max.}$ is not exceeded for the size of heat sink used.

*1: Assuming two-channel output with an $I_o \text{ peak}$ per channel exceeding 1.0 A. If the $I_o \text{ peak}$ per channel is 1.0 A or less, the allowable operating voltage range is 5.5 to 20 V (range not exceeding $P_d \text{ max.}$) for all R_L values.

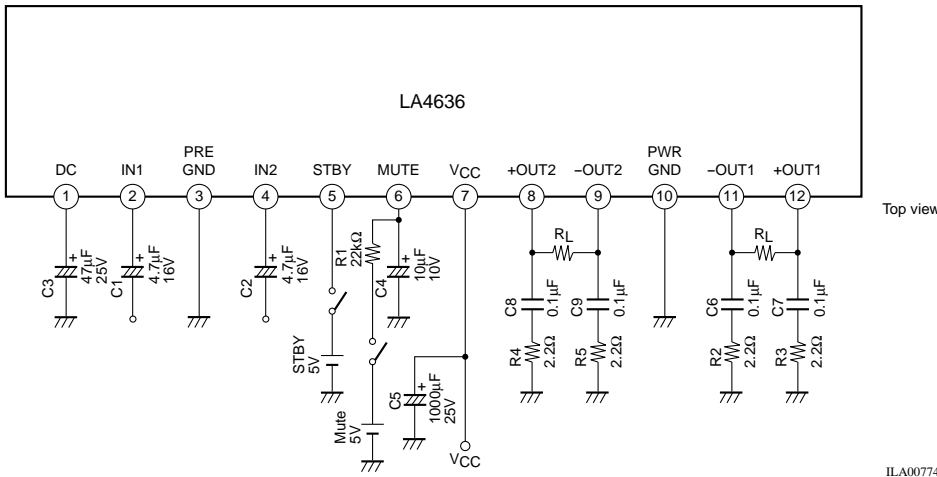

- Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.
- SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

LA4636

Operating Characteristics at $T_a = 25^\circ\text{C}$, $V_{CC} = 12\text{ V}$, $R_L = 4\ \Omega$, $f = 1\text{ kHz}$, $R_g = 600\ \Omega$

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Quiescent current	I_{CCO}	$R_g = 0$	40	70	150	mA
Standby current	I_{ST}			0	10	μA
Voltage gain	VG	$V_O = 0\text{ dBm}$	33	35	37	dB
Total harmonic distortion	THD	$P_O = 1\text{ W}$		0.06	0.2	%
Output power	P_{O1} P_{O2}	THD = 10% THD = 10%, $R_L = 6\ \Omega$	8	11 9		W W
Output noise voltage	V_{NO}	$R_g = 0$, BPF = 20 Hz to 20 kHz		0.14	0.3	mV
Ripple rejection	SVRR	$R_g = 0$, $f_R = 100\text{ Hz}$, $V_R = 0\text{ dBm}$	50	60		dB
Channel separation	CH Sep	$R_g = 10\text{ k}\Omega$, $V_O = 0\text{ dBm}$	50	60		dB
Input resistance	R_i		14	20	26	$\text{k}\Omega$
Output offset voltage	$V_N\text{ offset}$	$R_g = 0$	-300		+300	mV
Standby pin voltage	V_{ST}	Amplifier on (pin 5 voltage)	2.5		10	V
Mute pin voltage	V_M	Mute on (pin 6 voltage)	1.5		3	V
Mute attenuation	ATTM	$V_O = 1\text{ Vrms}$, BPF = 20 Hz to 20 kHz	80	90		dB

Measurement Circuit Diagram

Note: The LA4636 is basically pin-compatible with the LA4635, but there are partial differences in operation and usage, including with regard to externally connected parts.

ILA00774

Pin 6 Equivalent Circuit Inside IC

ILA00775

Signal Mute Function

- Connecting a CR of the recommended value (10 μF , 22 $\text{k}\Omega$) to pin 6 of the IC and applying +5 V turns signal mute on. This function mutes low-frequency popping noises.
- The CR is for smoothing during attack and recovery. The 10 μF capacitor also performs smoothing after the starting time, so it is necessary even if the signal mute function is not used.

If a 22 $\text{k}\Omega$ external resistor is used, the pin 6 inflow current (I_{mute}) will be approximately 160 μA when +5 V is applied.

It is possible to change the external resistance value if the voltage applied is changed or to match the capacity of the microprocessor, but the popping noise level could rise if the pin 6 inflow current increases too much. It is therefore important to check the inflow current whenever the resistance value is changed.

Standby Function

Pin 5 Equivalent Circuit Inside IC

ILA00776

The IC's pin 5 is the standby pin, and the amplifier turns on when approximately 2 V or more is applied to it. If +5 V is applied directly to pin 5 the inflow current of pin 5 is approximately 240 µA.

$$I_{STB} = \frac{5\text{ V} - 1.4\text{ V}}{15\text{ k}\Omega} = 240\ \mu\text{A}$$

If the microprocessor is used, an external current limiting resistor (R_{STB}) should be inserted if necessary (to reduce the inflow current).

If a voltage other than that supplied by the microprocessor is applied, the pin 5 inflow current should be limited to 500 µA or less using the applied V_{STB} value by calculating R_{STB} using the following equation and inserting a resistor if necessary.

$$R_{STB} = \frac{\text{Applied Voltage } (V_{STB}) - 1.4\text{ V}}{500\ \mu\text{A}} - 15\text{ k}\Omega$$

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
