

## FEATURES

- *Guaranteed* 0.5 ppm/°C temperature coefficient
- *Guaranteed* 1.0  $\Omega$  max. dynamic impedance
- *Guaranteed* 20 $\mu$ V RMS max. noise
- *Guaranteed* initial tolerance of 2%
- Wide operating current range

## APPLICATIONS

- Precision voltage reference for multimeters
- Calibration equipment voltage standards
- Laboratory measurement equipment
- Industrial monitor/control instruments
- High accuracy data converters

## DESCRIPTION

The LM199/399 precision reference features excellent temperature stability over a wide range of voltage, temperature, and operating current conditions. A stabilizing heater is incorporated with the active zener on a monolithic substrate which nearly eliminates changes in voltage with temperature. The subsurface zener operates over a current range of 0.5mA to 10mA, and offers minimal noise and excellent long term stability.

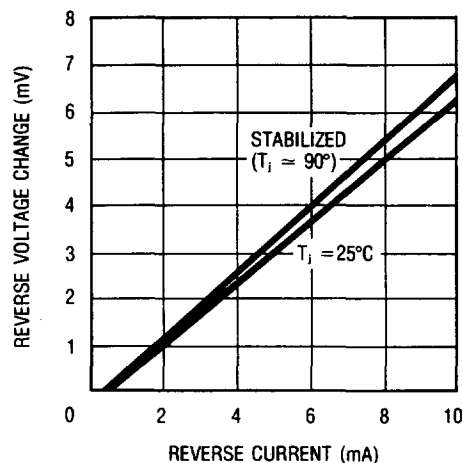

Ideal applications for the LM199/399 include digital voltmeters, precision calibration equipment, current sources and a variety of other precision low cost references. A 10 volt buffered reference application is shown below.

**3**

**10 Volt Buffered Reference**

**Reverse Voltage Change**

**ABSOLUTE MAXIMUM RATINGS**

Temperature Stabilizer .....	40V
Reverse Breakdown Current .....	20mA
Forward Current .....	1mA
Reference to Substrate Voltage $V_{(RS)}$ , (Note 1). .....	-0.1V
Operating Temperature Range	
LM199/199A .....	-55°C to 125°C
LM399/399A .....	0°C to 70°C
Storage Temperature Range	
LM199/199A .....	-65°C to 150°C
LM399/399A .....	-65°C to 150°C
Lead Temperature (Soldering, 10 sec.) .....	300°C

	Initial Turn-on Current	$9V \leq V_H \leq 40V$ , $T_A = 25^\circ C$ , (See Note 4)		140	200		140	200	mA

The ● denotes the specifications which apply over full operating temperature range.

**Note 1:** The substrate is electrically connected to the negative terminal of the temperature stabilizer. The voltage that can be applied to either terminal of the reference is 40V more positive or 0.1V more negative than the substrate.

**Note 2:** These specifications apply for 30V applied to the temperature stabilizer and  $-55^\circ C \leq T_A \leq 125^\circ C$  for the LM199; and  $0^\circ C \leq T_A \leq 70^\circ C$  for the LM399.

**Note 3:** Devices with maximum guaranteed long term stability of 20 ppm/ $\sqrt{kHz}$  are available. Drift decreases with time.

**Note 4:** This initial current can be reduced by adding an appropriate resistor and capacitor to the heater circuit. See the performance characteristic graphs to determine values.

**Note 5:** Guaranteed by "Reverse Breakdown Change with Current."
