

MOTOROLA SEMICONDUCTOR TECHNICAL DATA

(Dual MC1741) Internally Compensated, High Performance Operational Amplifiers

The MC1747 and MC1747C were designed for use as summing amplifiers, integrators, or amplifiers with operating characteristics as a function of the external feedback components. The MC1747L and MC1747CL are functionally and electrically equivalent to the μA747 and μA747C respectively.

- No Frequency Compensation Required
- Short Circuit Protection
- Wide Common Mode and Differential Voltage Ranges
- Low-Power Consumption
- No Latch Up
- Offset Voltage Null Capability
