

# Protection of Lithium Ion Batteries

## Monolithic IC MM1414

### Outline

This IC protects lithium ion batteries in the event of overcharge, overdischarge and overcurrent. It has the following two functions: an overcurrent detection function that turns the external FET-SW off when a problem occurs during charging, etc. and excess voltage is impressed on each battery for longer than a certain time, and an overdischarge detection function that turns the external FET-SW off when battery voltage drops below a certain voltage during discharge, in order to prevent battery overdischarge. When these functions operate, the IC is put into low consumption current mode. It also has an overcurrent detection function that turns the FET-SW off when excess current flows due to a short or the like.

### Series Table

Temperature conditions A: Ta=-25 ~ 75°C, B: Ta=-20 ~ 70°C, C: Ta=0 ~ 50°C,  
D: Ta=0 ~ 40°C, E: Ta=-20 ~ 25°C

Model	Package	Overcharge detection voltage (V)	Overcharge detection voltage temperature conditions	Overcharge detection hysteresis voltage (V)	Overdischarge detection voltage (V)	Overdischarge resumption voltage (V)	Overcurrent detection voltage (mV)
	TSOP-20A

	GV	4.295±0.025	C	8±8	2.30±0.10	3.00±0.15	150±15

### Features

1. Consumption current (during overcharge)  $V_{CELL} = 4.4$  CON = 0V  $55\mu A$  typ.
2. Consumption current (normal)  $V_{CELL} = 3.5V$  CON = 0V  $15\mu A$  typ.
3. Consumption current (during overdischarge)  $V_{CELL} = 1.9V$  CON = 0V  $0.5\mu A$  typ.
4. Consumption current (during overdischarge)  $V_{CELL} = 1.0V$  CON = Vcc  $0.1\mu A$  max.
5. Overcharge detection voltage (Ta = 0°C ~ 50°C) A, C, D, G; Load open 500kΩ or hight F; Load open 1MEGΩ or hight

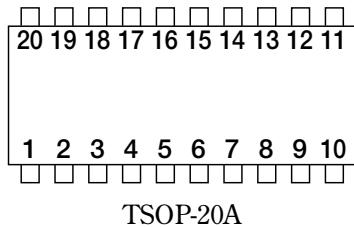

### Package

TSOP-20A

### Applications

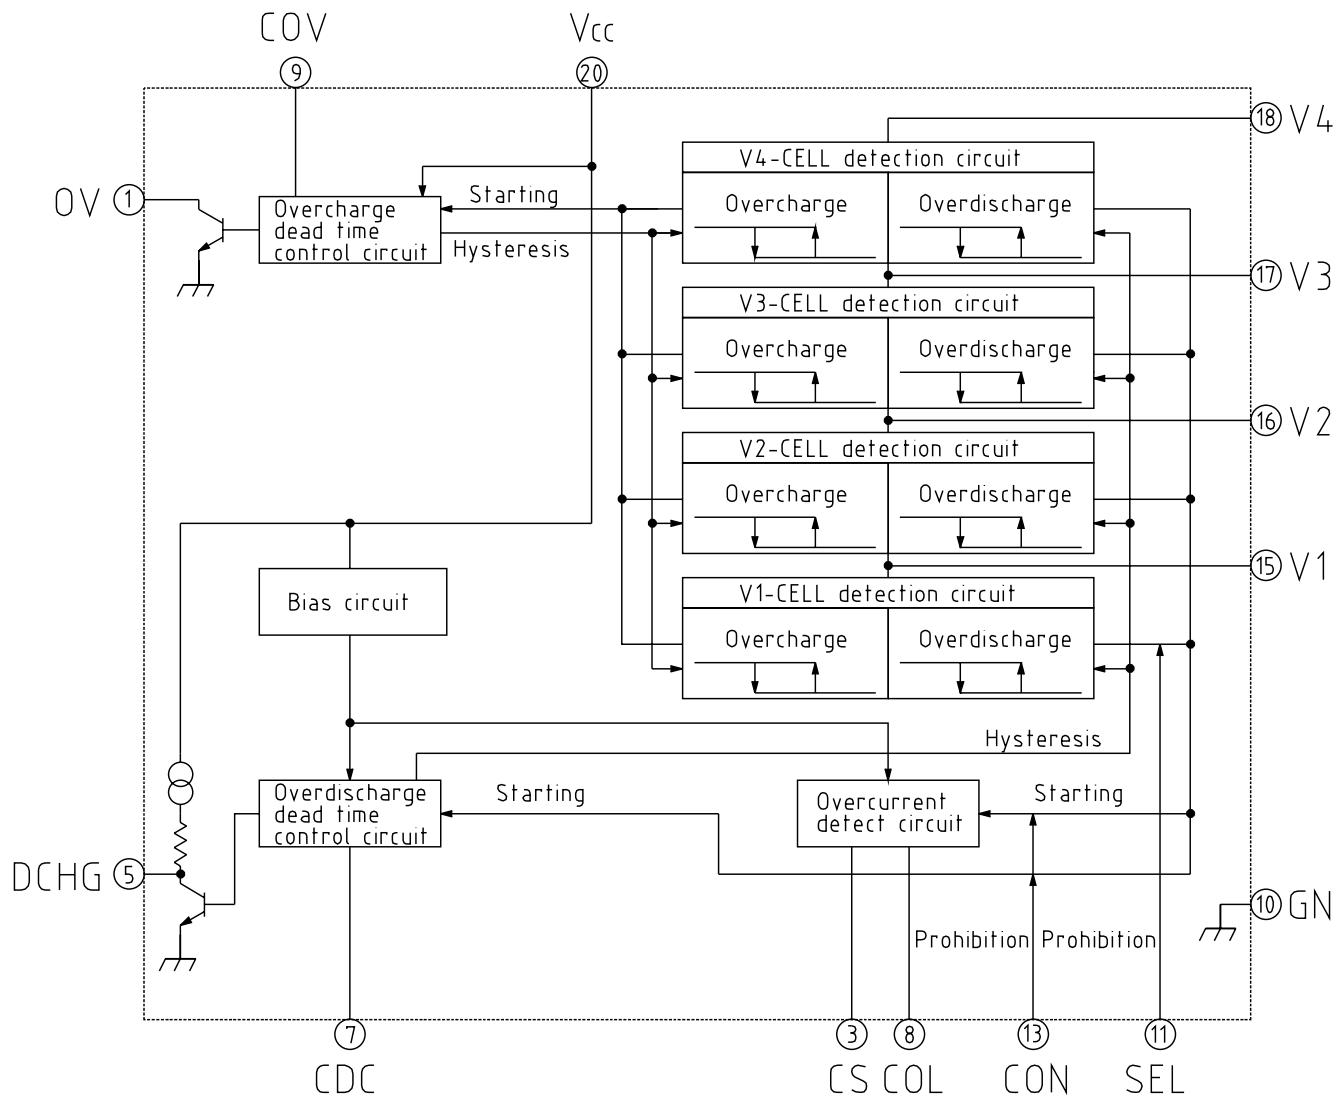

IC for protection of lithium-ion batteries consisting of three or four cells  
Notebook PC lithium - ion battery packs

## Pin Assignment

1	OV	11	SEL
2	N.C	12	N.C
3	CS	13	CON
4	N.C	14	N.C
5	DCHG	15	V1
6	N.C	16	V2
7	CDC	17	V3
8	COL	18	V4
9	COV	19	N.C
10	GND	20	Vcc

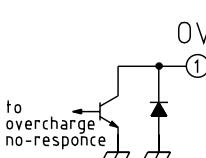

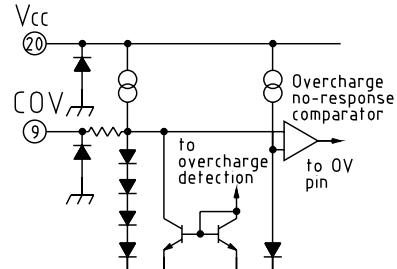

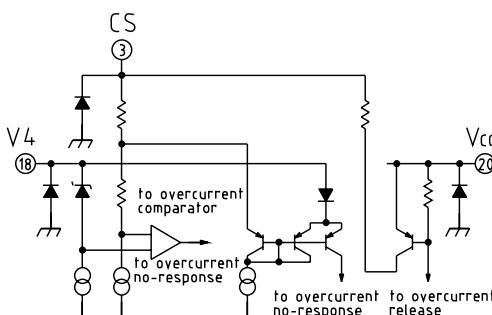

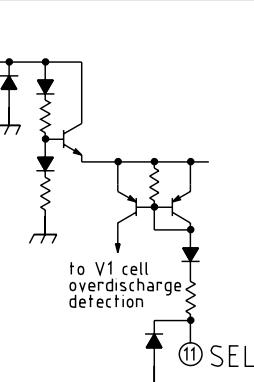

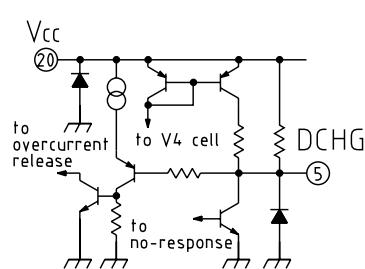

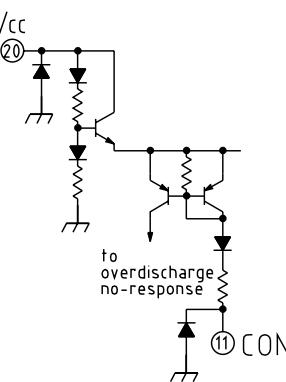

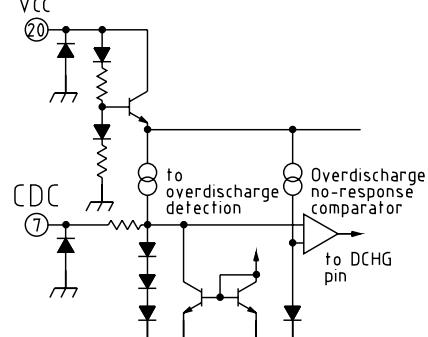

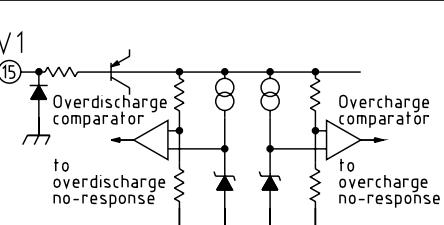

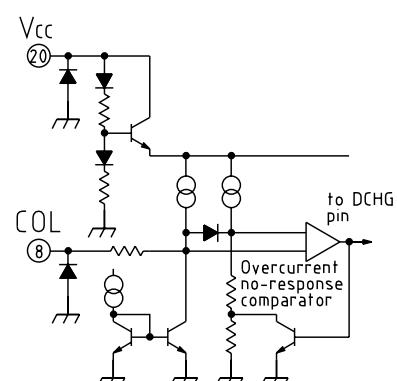

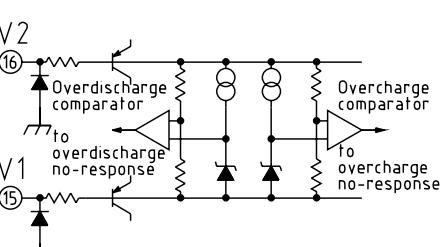

## Block Diagram

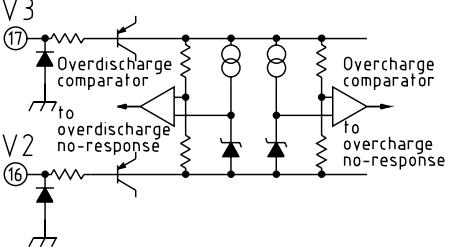

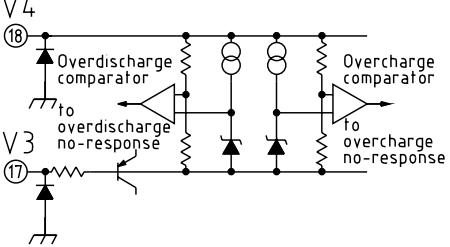

## Pin Description

Pin No.	Pin name	I/O	Functions
1	OV	Output	Overcharge detection output pin NPNTr open collector output Normal: high impedance Overcharge: Low
2	N.C		Not connected
3	CS	Input	Overcurrent detection pin Monitors load current equivalently by the voltage drop between discharge control FET source and drain, and makes DCHG pin high when the voltage goes below overcurrent detection voltage, turning off discharge control FET. After overcurrent detection, current flows from this pin and when there is a light load, overcurrent mode is released. This function does not operate in overdischarge mode.
4	N.C		Not connected
5	DCHG	Output	Discharge control FET (P-ch) drive pin Normal: Low Overdischarge: High
6	N.C		Not connected
7	CDC	Input	Overdischarge detection dead time setting pin Dead time can be set by connecting a capacitor between CDC pin and ground.
8	COL	Input	Overcurrent detection dead time setting pin Dead time can be set by connecting a capacitor between COL pin and ground.
9	COV	Input	Overcharge detection dead time setting pin Dead time can be set by connecting a capacitor between COV pin and ground.
10	GND	Input	Ground pin
11	SEL	Input	3 cell switch pin      SEL pin = GND: 3 cell (Connect V1 to GND) SEL pin = Vcc: 4 cell
12	N.C		Not connected
13	CON	Input	Discharge FET ON/OFF pin CON pin low; DCHG pin low (Normal mode) CON pin high; DCHG pin high (Discharging prohibited)
14	N.C		Not connected
15	V1	Input	V1 cell high side voltage input pin
16	V2	Input	V2 cell high side voltage and V3 cell low side voltage input pin
17	V3	Input	V3 cell high side voltage and V4 cell low side voltage input pin
18	V4	Input	V4 cell high side voltage input pin
19	N.C		Not connected
20	Vcc	Input	Power supply input pin

## Absolute Maximum Ratings

Item	Symbol	Ratings	Unit
Storage temperature	T <sub>STG</sub>	-40~+125	°C
Operating temperature	T <sub>OPR</sub>	-20~+70	°C
Power supply voltage	V <sub>CC</sub> max.	-0.3~24	V
OV pin impressed voltage	V <sub>OV</sub> max.	-0.3~24	V
SEL pin impressed voltage	V <sub>SEL</sub> max.	-0.3~24	V
CON pin impressed voltage	V <sub>CON</sub> max.	-0.3~24	V
Allowable loss	P <sub>d</sub>	300	mW

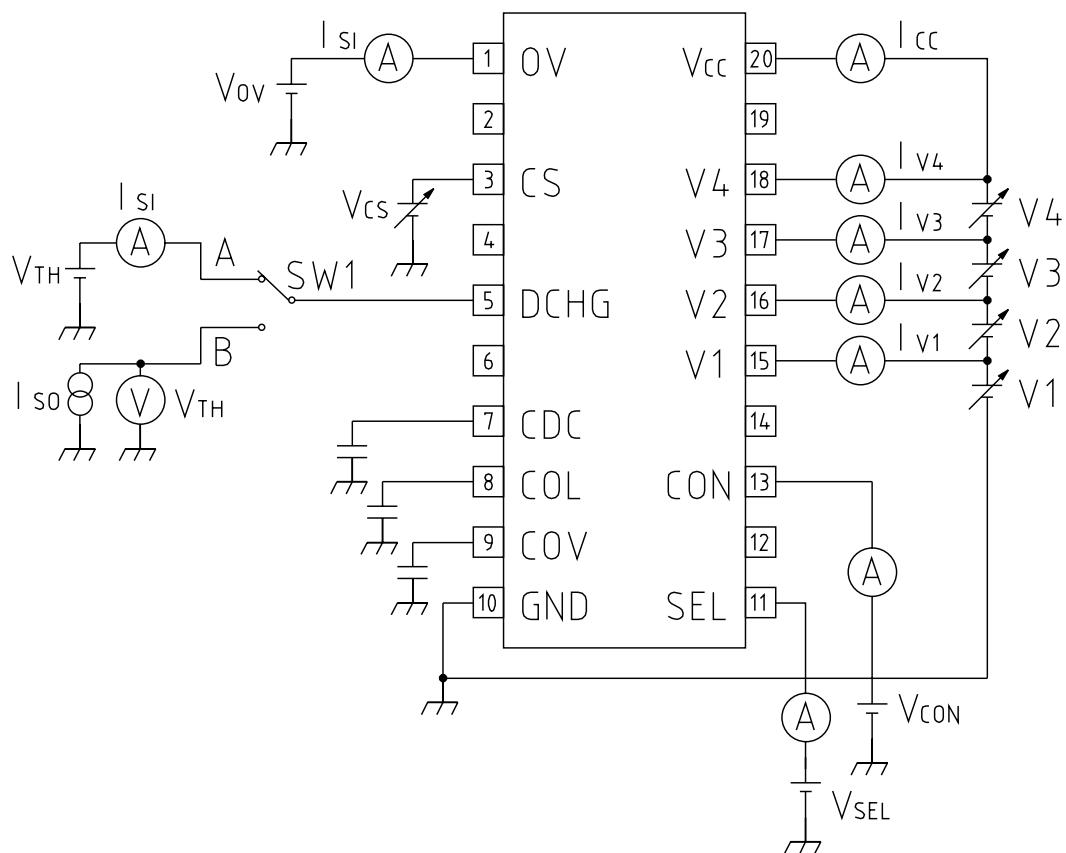

## Recommended Operating Conditions

Item	Symbol	Ratings	Unit
Operating temperature	T <sub>OPR</sub>	-20~+70	°C
Operating voltage	V <sub>OPR</sub>	+1.8~+24	V

**Electrical Characteristics**(Except where noted otherwise, Ta=25°C, Vcc=V4+V3+V2+V1,  
VCELL=3.5V, CON=GND, SEL=Vcc) Models listed MM1414G

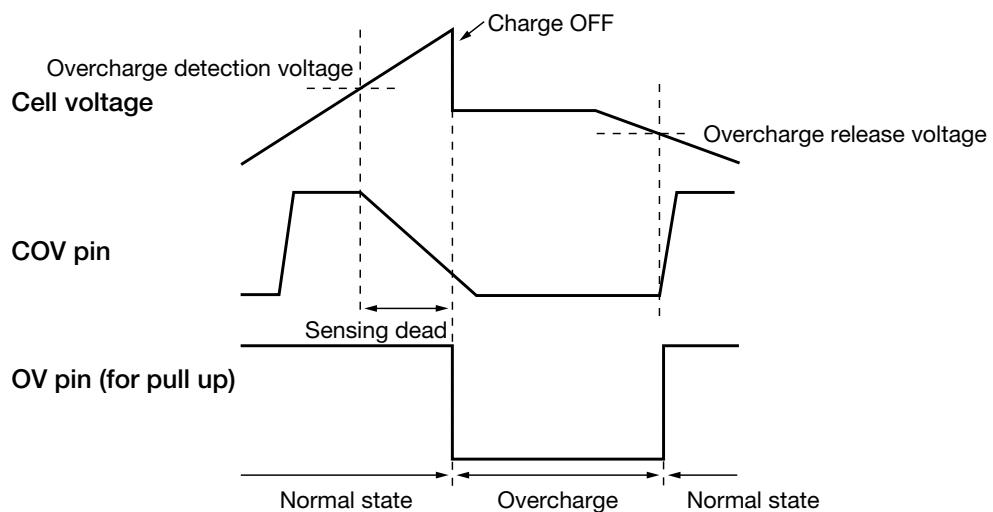

Item	Symbol	Measurement conditions	Min.	Typ.	Max.	Unit
Consumption current (Vcc pin) 1	Icc1	VCELL=4.4V, CON=0V		55	110	µA
Consumption current (Vcc pin) 2	Icc2	VCELL=3.5V, CON=0V		27	50	µA
Consumption current (Vcc pin) 3	Icc3	VCELL=1.8V, CON=0V		2	4	µA
Consumption current (Vcc pin) 4	Icc4	VCELL=3.5V, CON=Vcc		12	20	µA
Consumption current (Vcc pin) 5	Icc5	VCELL=1.8V, CON=Vcc		1	2	µA
