## Analog Signal Processor for CD Players

### OVERVIEW

The LA9210M is a bipolar analog signal processor and servocontroller IC for CD players. It is designed to be used with an LA7860/65 series digital signal processor and a minimum of external components to form a complete controller for a compact disc player.

The LA9210M operates from either a single 5 V supply, single-ended 5 V and 7 V supplies or a dual  $\pm 5$  V supply and is available in 80-pin QIPs.

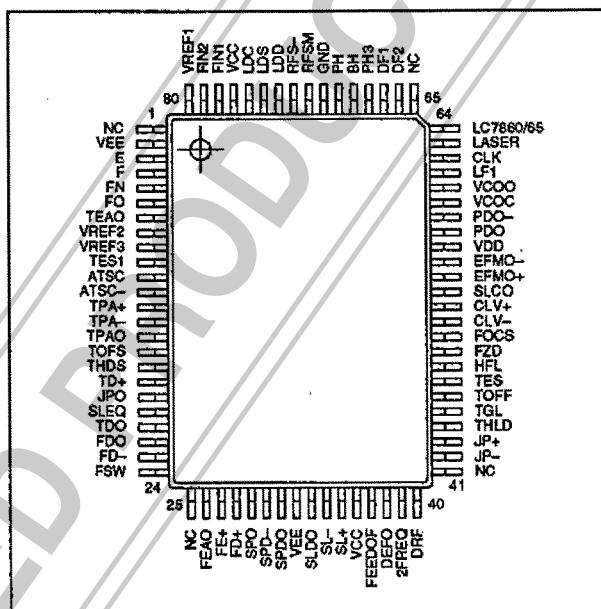

### FUNCTIONS

- RF amplifier
- Slice level control
- Voltage-controlled oscillator (VCO)
- VCO control amplifier
- Automatic laser power control (APC)
- Focus error amplifier
- Tracking error amplifier
- Track jump amplifier
- Focus servo preamplifier
- Tracking servo preamplifier
- Spindle servo preamplifier
- Sled servo preamplifier
- RF detector
- HF level detector
- Defect detector
- Shock detector
- Focus switch
- Tracking servo gain switch
- Tracking error slice comparator

### FEATURES

- Minimum of external components required
- Normal and double-speed VCO
- 5 V supply, single-ended 5 V and 7 V supplies or dual  $\pm 5$  V supply
- 80-pin QIP
