LA5606N

BS/CS Tuner Regulator with On/Off Function

Overview

The LA5606N is a low saturation regulator IC for BS/CS tuner applications, equipped with four regulators capable of ON/OFF control.

Applications

- BS/CS tuner power supply system.
- Audio Video (AV) equipment with BS/CS receivers.
- Compact electronic equipment.

Functions

- Four low saturation regulators (15.7 V/300 mA, 12 V/150 mA, 9 V/100 mA and 5 V/500 mA).
- Output on/off control ("L" active).
- On-chip protective circuitry (current limiter, thermal shutdown).

Features

- Supports compact set design while incorporating four regulators needed by BS/CS tuners.
- Flexible system design by independent on/off control of V_01 , V_04 , as well as V_02 and V_03 pair.
- Reduces internal loss by employment of low saturation regulators.
- Adapting three input pins contributes power dissipation reduction and heat sink design.

Package Dimensions

unit: mm

3023A-SIP14H

- Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.
- SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

Function Table

The following table indicates conditions for operation with $V_{IN}1 \ge V_{IN}2 \ge V_{IN}3$ ($V_{IN}1 \ge 11$ V, $V_{IN}2 \ge 6$ V and $V_{IN}3 \ge 4$ V).

EN1, EN2, EN3	V _O 1, V _O 2/V _O 3, V _O 4		
Н	L		
L	Н		

- 1. Within the table of EN "H" indicates an H level and "L" indicates an L level.
- 2. In the table of V_O "H" indicates an output on voltage while "L" indicates an output off voltage.
- 3. All output voltages corresponding to all EN locations are controlled independently. (EN1 \rightarrow V₀1, EN2 \rightarrow V₀2 and V₀3, EN3 \rightarrow V₀4)
- 4. When EN is open, V_{O} is at the H level.

$$V_01(V_04)$$

$$V_0^2$$
 and V_0^3

Notes for Above Applications

- 1. GND1 and GND2 should be at the same electric potential; since these are connected to the substrate of the LA5606N, the lowest possible electric potential should be used. (If the electric potential of GND1 and GND2 differ, performance characteristics of the LA5606N can not be guaranteed.)
- 2. Rise and fall times for $V_{IN}1$, $V_{IN}2$ and $V_{IN}3$ should be unified and concerning these pins operating in an opencircuit state or connected to the ground state is forbidden.
- 3. When $V_{IN}1$ and $V_{IN}2$ are open or lower than the required value, V_O1 to V_O4 are forced off for the IC's protection.
- 4. Use output capacitors C_{OUT} 1 and C_{OUT} 4 rated at 100 μ F or more and C_{OUT} 2 and C_{OUT} 3 rated at 47 μ F or more. To prevent oscillation at low temperature, be sure to use less temperature sensitive capacitors.
- 5. In order to provide stable operation, C_{IN}1 to C_{IN}3 and C_{OUT}1 to C_{OUT}4 should be mounted as close to the LA5606N as possible.
- 6. The NC pins should not be used (No. 1 and No. 14 in the pin layout).
- 7. The output voltage of each voltage regulator is affected by a change in the load on the other voltage regulators.

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
