

Features

- Optimal for 2 phase excitation drive for 2-phase stepping motors
- “Soft off” function that reduces power supply line noise when switching from drive to standby modes. (Requires the use of one external capacitor.)
- No limitations on the magnitude relationship between the power supply voltage (V_{CC}) and the input voltage (V_{IN})
- Low saturation voltage. $V_{O(sat)} = 0.55\text{ V}$ typical at $I_O = 300\text{ mA}$
- Standby current: zero
- Thermal shutdown circuit
- Through-current prevention circuit
- SOP14 Package

Applications

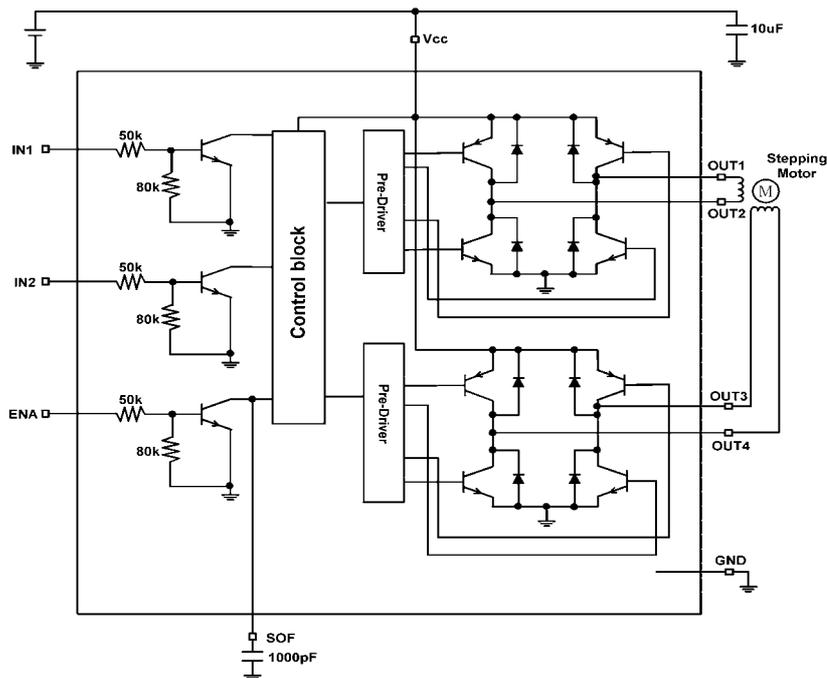

- Camera
- Printer
- Other portable equipment

General Description

The AT5548 is 2-channel low-voltage/low saturation voltage type bidirectional motor driver IC that are optimal for use as 2-phase stepping motor drivers in cameras, printers, and other portable equipment. The output circuits are of the bipolar type, with PNP transistors in the upper side and NPN transistors in the lower side, and they achieve low saturation output and low power characteristics despite being provided in a miniature package.

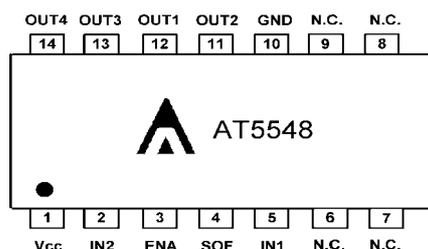

The IC product can directly control a motor from signals from a microcontroller. The AT5548 is optimal for 2-phase excitation drive for 2-phase stepping motors using 3-input logic (ENA, IN1, IN2).

SOF Pin (“Soft Off” Function) Operation

The soft off function reduces power supply line noise due to the kickback current generated when the stepping motor drive mode is switched from drive to standby. The “Soft Off” function provided by this IC operates when a capacitor (0.001 to 0.01 μ F) is connected between SOF pin and Ground. Leave the SOF pin open to disable the soft off function.
