Dolby B- and C-Type Noise Reduction System

Description

HA12141 series are silicon monolithic bipolar IC series providing dual channel Dolby B- and C-type noise reduction in one chip.

These ICs are available only to licenses of Dolby Laboratories Licensing Corporation.

Licensing and application information may be obtained from Dolby Laboratories Licensing Corporation.

HA12141 series provide the following functions and features.

Functions

- Dual Dolby B/C-type NR processor
- NR OFF/B/C control switch
- MPX by-pass/encode/decode (MPX OFF/REC/PB) control switch
- MPX filter drive circuit

Features

- Low external parts count
- R-C spectrum skewing network using passive components
- External capacitors are E-3 series (small values)
- Several time constant capacitors built into the IC
- Separate REC/PB input and output. Unprocessed signal output available in the encode and decode modes.
- Common PCB pattern is available with HA12134A series (Dolby B NR), because these ICs offer similar pin layout.
- 2 type PB-OUT level (300 mV, 580 mV)
- 3 type package (DP-30S, MP-44S, FP-28D) Wide range of operating supply voltage (7.5 V to 16 V)

Dolby is a trademark of Dolby Laboratories Licensing Corporation.

Table 1 Ordering Information

Type No.	Package	Dolby level	PB-OUT level	REC-OUT level	Note
HA12141NT	DP-30S	300 mVrms	300 mVrms	300 mVrms	
HA12142NT	DP-30S	300 mVrms	580 mVrms	300 mVrms	
HA12151MA	MP-44S	300 mVrms	300 mVrms	300 mVrms	L, Rch separate control SW
HA12153MA	MP-44S	300 mVrms	580 mVrms	300 mVrms	↓
HA12161FP	FP-28D	300 mVrms	300 mVrms	—	PB-mode only
HA12162FP	FP-28D	300 mVrms	580 mVrms	—	↓

Application Note

T-77-21

Power Supply Range

HA12141 series are designed to operate on either single supply or split supply.

The Operating range of the supply voltage is shown in table 1.

The lower limit of supply voltage depends on the line output reference level.

The minimum value of the overload margin is specified as 12 dB by Dolby Laboratories.

HA12141 series are provided with two line output level, which will permit an optimum overload margin for power supply conditions.

Table 1 Supply Voltage

Type No.	Single supply	Split supply
HA12141NT HA12151MA HA12161FP	7.5 to 16 V	±3.8 to ±8 V
HA12142NT HA12153MA HA12162FP	9.5 to 16 V	±4.8 to ±8 V

Reference Voltage

For the single supply operation these devices generate the reference voltage of half the supply voltage that is the signal grounds. As the peculiarity of these devices the capacitor for the ripple filter is very small about 1/100 compared with conventional devices.

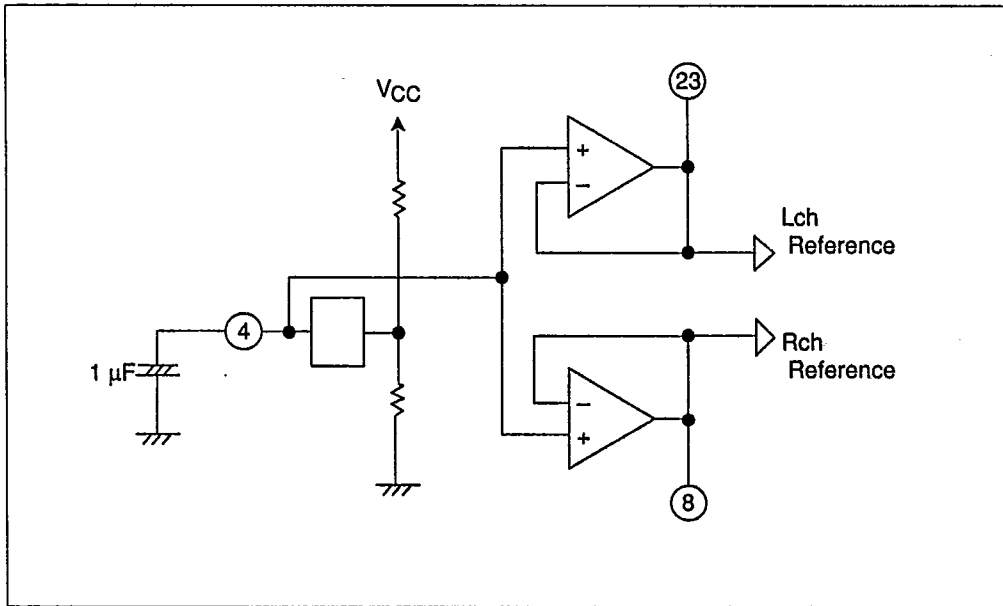

Figure 1 The Block-Diagram of Reference Voltage Supply

The Reference voltage supplies are provided for the left channel and the right channel. The block-diagram is shown as figure 1.

HA12141NT, HA12151MA, HA12161FP, HA12142NT, HA12153MA, HA12162FP

T-77-21

Operation Mode Control

HA12141 series provide fully electronic switching circuits. The function are controlled by DC voltage and are NR OFF/B/C and PB/REC/MPX.

The switching truth tables are shown in table 2 and table 3.

MPX-off mode means that signal from input amp doesn't go through the MPX filter, but signal goes through the SS circuit after being attenuated 3 dB by internal resistor. Refer to figure 2.

It is to be desired that CR time constant circuits are provided at NR OFF/B/C terminal and PB/REC/MPX terminal with time constant from 0.1 sec to 1 sec. If so, it will reduce the switching click noise effectively.

Table 2 Switching Truth Table (NR OFF/B/C)

Function	Single supply	Split supply	Unit	Note
NR OFF	0 to $\frac{V_{CC}}{2} - 3$	V_{EE} to -3	V	
B type	$\frac{V_{CC}}{2} - 0.5$ to $\frac{V_{CC}}{2} + 0.5$	-0.5 to 0.5	V	*1
C type	$\frac{V_{CC}}{2} + 3$ to V_{CC}	3 to V_{CC}	V	

Table 3 Switching Truth Table (PB/REC/MPX)

Function	Single supply	Split supply	Unit	Note
Play back (Decode mode)	0 to 0.4	V_{EE} to $V_{EE} + 0.4$	V	
Record (Encode mode)	2.5 to $\frac{V_{CC}}{2} + 0.5$	$V_{EE} + 2.5$ to 0.5	V	*1
MPX-OFF	$V_{CC} - 1$ to V_{CC}	$V_{CC} - 1$ to V_{CC}	V	

Note: 1. These functions are available for being open at NR B mode and REC mode.

Application Circuits

HA12161FP/62FP application

HA12161FP/62FP are developed for exclusive playback of car stereo players.

But these devices are provided with AUX input. This application providing AUX input is available for car stereo players and car stereo cassette decks.

AUX input will be useful for a tuner input. In this case PB/REC/MPX switching operates as the switching of PB/AUX1/AUX2.

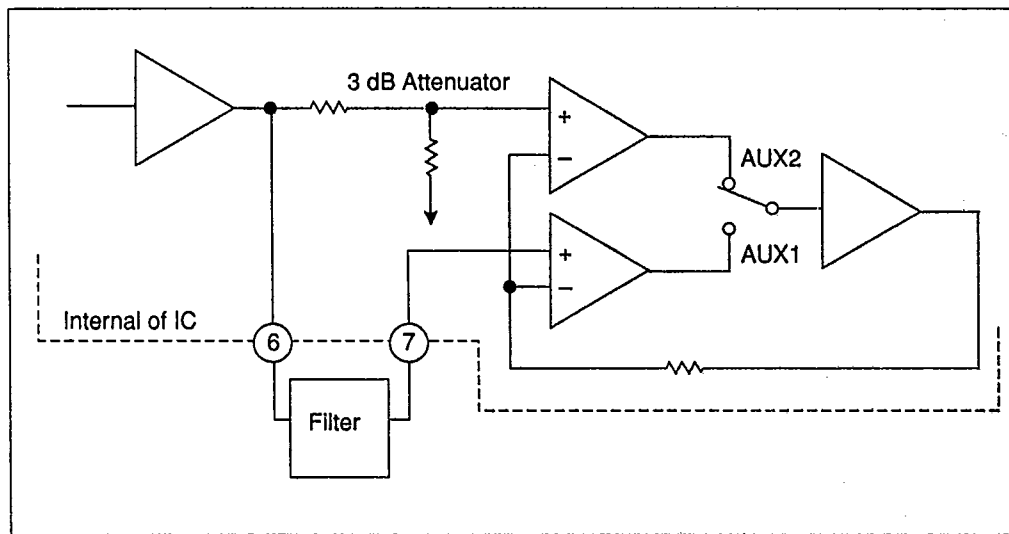

Figure 4 Application of AUX Mode

For example AUX1 mode is AM tuner input and AUX2 mode is FM tuner input respectively.

Encode Decode processor for 3 head cassette deck

HA12151MA and HA12153MA has two control terminals for C/B/off mode and MPX-off/REC/PB mode respectively. So, it is available to select the mode of recording channel or playback channel respectively.

Application for dubbing cassette decks

T-77-21

HA12141 series has unprocessor signal from recording out terminals during playback mode. So, it is simply applied for dubbing cassette decks.
