

MC10EP16T, MC100EP16T

3.3V / 5V ECL Differential Receiver/Driver with Internal Termination

The EP16T is a world-class differential receiver/driver. The device is functionally equivalent to the EP16 with internal termination resistors. A $50\ \Omega$ resistor is connected from the D input to the VT pin and from the \bar{D} input to the $\bar{V}\bar{T}$ pin. Tie the VT and $\bar{V}\bar{T}$ pins to VTT supply ($V_{CC} - 2\ V$) for parallel termination or connect VT and $\bar{V}\bar{T}$ pins for $100\ \Omega$ input series termination.

Special considerations are required for differential inputs under No Signal conditions to prevent instability.

The 100 Series contains temperature compensation.

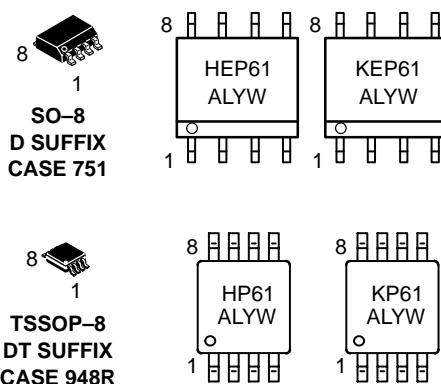

- 220 ps Typical Propagation Delay
- Maximum Frequency > 3 GHz Typical
- PECL Mode Operating Range: $V_{CC} = 3.0\ V$ to $5.5\ V$ with $V_{EE} = 0\ V$
- NECL Mode Operating Range: $V_{CC} = 0\ V$ with $V_{EE} = -3.0\ V$ to $-5.5\ V$
- Internal $50\ \Omega$ Termination Resistors
