## Ethernet Switch Clock Source

## Description

The ICS650-40 is a clock chip designed for use in Ethernet Switch applications. Using ICS' patented Phase-Locked Loop (PLL) techniques, the device takes a 25 MHz crystal input and produces various output clock frequencies as listed in Output Select Table.

## Features

- Packaged in 16-pin TSSOP
- Available in Pb (lead) free package
- Operating voltage of 3.3 V
- Low power consumption
- Input frequency of 25 MHz
- Low long-term jitter
- 2.5 V to 3.3 V clock outputs

## Pin Descriptions

| Pin <br> Number | Pin <br> Name | Pin <br> Type | Pin Description |
| :---: | :---: | :---: | :--- |
| 1 | X1/ICLK | Input | Crystal or clock input. Connect to a 25 MHz crystal or single ended clock. |
| 2 | VDD | Power | Connect to +3.3 V. |
| 3 | GND | Power | Connect to ground. |
| 4 | VDDOA | Power | Connect to +2.5 V or +3.3 V. For clock output buffer A only. |
| 5 | CLKA | Output | Clock A output with weak pull-down resistor. |
| 6 | CLKB | Output | Clock B output with weak pull-down resistor. |
| 7 | VDDOB | Power | Connect to +2.5 V or +3.3 V. For clock output buffer B only. |
| 8 | GND | Power | Connect to ground. |
| 9 | S0 | Input | Select pin 0. |
| 10 | S1 | Input | Select pin 1. |
| 11 | VDD | Power | Connect to +3.3 V. |
| 12 | VDD | Power | Connect to +3.3 V. |
| 13 | GND | Power | Connect to ground. |
| 14 | OE | Input | Output enable tri-states outputs and device is not shut down. Internal <br> pull-up resistor. |
| 15 | GND | Power | Connect to ground. |
| 16 | X2 | Output | Crystal connection. Leave unconnected for clock input. |

## External Components

A minimum number of external components are required for proper operation. Decoupling capacitors of $0.01 \mu \mathrm{~F}$ should be connected between VDD and GND pairs. The capacitors should be placed between pins VDD and GND, and VDDO and GND, as close to the device as possible. A $33 \Omega$ series terminating resistor should be used on each clock output if the trace is longer than 1 inch . A 25 MHz fundamental mode parallel resonant crystal should be used with $\mathrm{C}_{\mathrm{L}}=18 \mathrm{pF}$.
On chip capacitors. On Chip capacitors are used for a 18 pF load crystal. Small 2 to 3 pf trimming capacitors are used from pins X1 to ground and X2 to ground to optimize the initial accuracy.

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS650-40. These ratings, which are standard values for ICS commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Notes:

1. \#\#\#\#\#\# is the lot code.
2. YYWW is the last two digits of the year, and the week number that the part was assembled.
3. "LF" designates Pb (lead) free package.
4. Bottom marking: (origin). Origin = country of origin if not USA.
