General Description

The G5122 inverting DC/DC converter is designed for small/ medium size LCD panel of high bias voltage.

Due to a typical 20 μ A quiescent current and 2.5V~6.5V supply voltage range, it is suitable for battery powered portable applications. Such as PDAs and Handheld Computers. When the IC sets to shutdown mode, it only consumes less than 1 μ A.

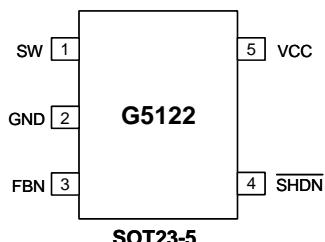

Furthermore, the 350mA current limit, 500ns fixed minimum off-time and tiny SOT23-5 package facilitates the use of smaller inductor and other surface-mount components to minimize the PCB size in those space-conscious applications.

To control the IC, no other external current is needed for the shutdown pin. It typically consumes less than 1 μ A of full supply range.

Note 1: The G5122 are guaranteed to meet performance specifications from 0°C to 85°C. Specifications over the -40°C to 85°C operating temperature range are assured by design, characterization and correlation with statistical process controls.

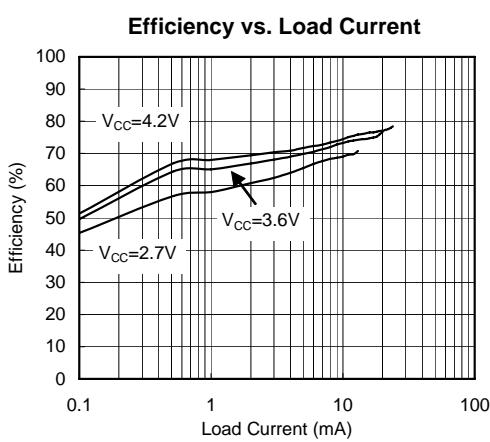

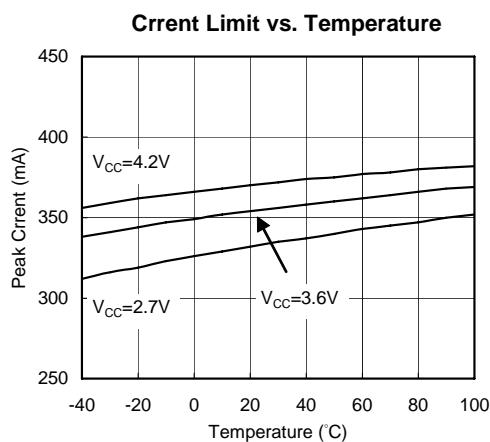

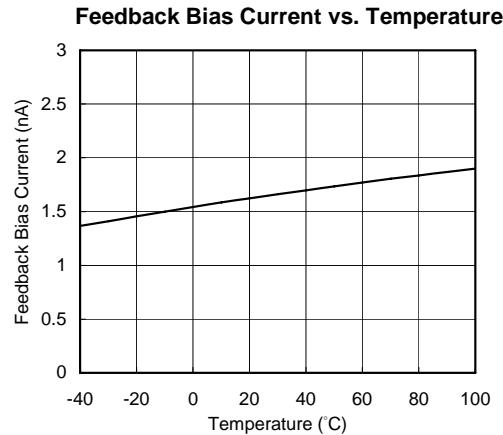

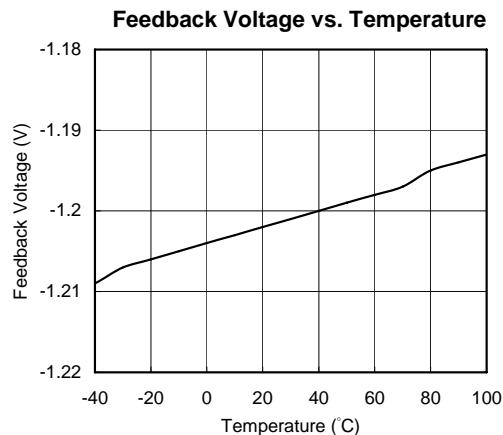

Note 2: Bias current flows into the FBN pin.

**Pin Description**

PIN	NAME	FUNCTION
1	SW	Switch Pin. The drain of the internal NMOS power switch. Connect this pin to inductor.
2	GND	Ground.
3	FBN	Feedback Pin. Set the output voltage by selecting values for R1 and R2 (see Block Diagram): $R1 = \frac{ V_{OUT} - 1.2}{1.2/R2 + (1.6 \times 10^{-6})}$
4	SHDN	Active-Low Shutdown Pin. Tie this pin to logic-high to enable the device or tied it to logic-low to turn this device off.
5	VCC	Input Supply Pin. Bypass this pin with a capacitor as close to the device as possible.
