**UM3481A Series*****Multi-Instrument Melody Generator*****Features**

- Powered by a 1.5V battery
- Low standby current
- 512-note memory, up to 16 songs
- Plays all the songs repeatedly or auto stop
- Plays one song only, repeatedly or auto stop
- 14 tones selectable
- 8 beats selectable
- Any song can be selected sequentially
- 3 timbres — piano, organ and mandolin
- 5 tempos available through mask setting
- On-chip envelope modulator and pre-amplifier

General Description

The UM3481A is a mask-ROM-programmed multi-instrument melody generator, implemented in CMOS technology. It is designed to play the melody according to the previously programmed information and is capable of generating 16 songs with 3 instrument effects: piano, organ and mandolin.

The device also includes a pre-amplifier which provides a simple interface to the driver circuit. The UM3481A series is intended for applications such as toys, door bells, music boxes, melody clock/timers and telephones.

Pin Configuration**Block Diagram****Pad Configuration**

**UM3481A Series****T-77-13****Absolute Maximum Ratings***

DC Supply Voltage -0.3V to 3.0V
 Input/Output Voltage V_{SS} -0.3 to V_{DD} +0.3V
 Operating Ambient Temperature -10°C to 60°C
 Storage Temperature -55°C to 125°C

***Comments**

Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only. Functional operation of this device at these or any other conditions above those indicated in the operational sections of this specification is not implied and exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Pin Description

Pin No.	Designation	Description
1	TSP	Output flag signal of melody auto stop In normal operation, this pin should be open
2	CE	Chip enabled if connected to V _{DD} Chip disabled if connected to V _{SS}
3	LP	Plays only one song if this pin is connected to V _{DD} Plays all songs if this pin is connected to V _{SS}
4	SL	A positive going edge applied to this pin will change to the next song
5	AS	The melody will repeat if this pin is connected to V _{DD} The melody will stop automatically if this pin is connected to V _{SS}
6	NC	No connection
7	ENV	Envelope circuit terminal
8	V _{SS}	Negative supply power
9	MTO	Modulated tone signal output
10	OP1	Pre-amplifier output 1
11	OP2	Pre-amplifier output 2
12	MTI	Modulated tone signal input to the pre-amplifier
13	OSC3	Pins 13-15 can be connected as an RC oscillator External oscillating signal can be input to Pin 15
14	OSC2	
15	OSC1	
16	V _{DD}	Positive power supply

Functional Description**Oscillator & Control Circuit**

The resistor R_1 & capacitor C_1 are connected externally to set the frequency at 100 KHz. Addition of R_S (shown in application CKT) in series with input inverter is to make the circuit insensitive to the variation of supply voltage. In standby condition (CE is Low) the operation of the OSC is inhibited. As soon as a high level signal is applied to the CE terminal, the circuit starts oscillating. Since the OSC frequency is used as a time base of the tone, rhythm and tempo generators, its accuracy will affect the quality of the melody.

Modulator Circuit

The tone signal and the timbre signal are put through

the modulator circuit. The output waveforms are shown in Fig. 1 and the modulator circuit shown in Fig. 2. Proper selection of C_2 , R_2 can produce envelopes of desired charging and discharging time.

Pre-amplifier

The pre-amplifier circuit is shown in Fig. 3. Feedback resistor R_S must be connected to obtain proper bias of pre-amp stage. In the standby state the pre-amp is disabled, and OP1 is pulled up to V_{DD} , OP2 is pulled down to V_{SS} .
