## MSM6502B/6512

### Low-power and Built-in LCD Driver 4-Bit Microcontroller

#### GENERAL DESCRIPTION

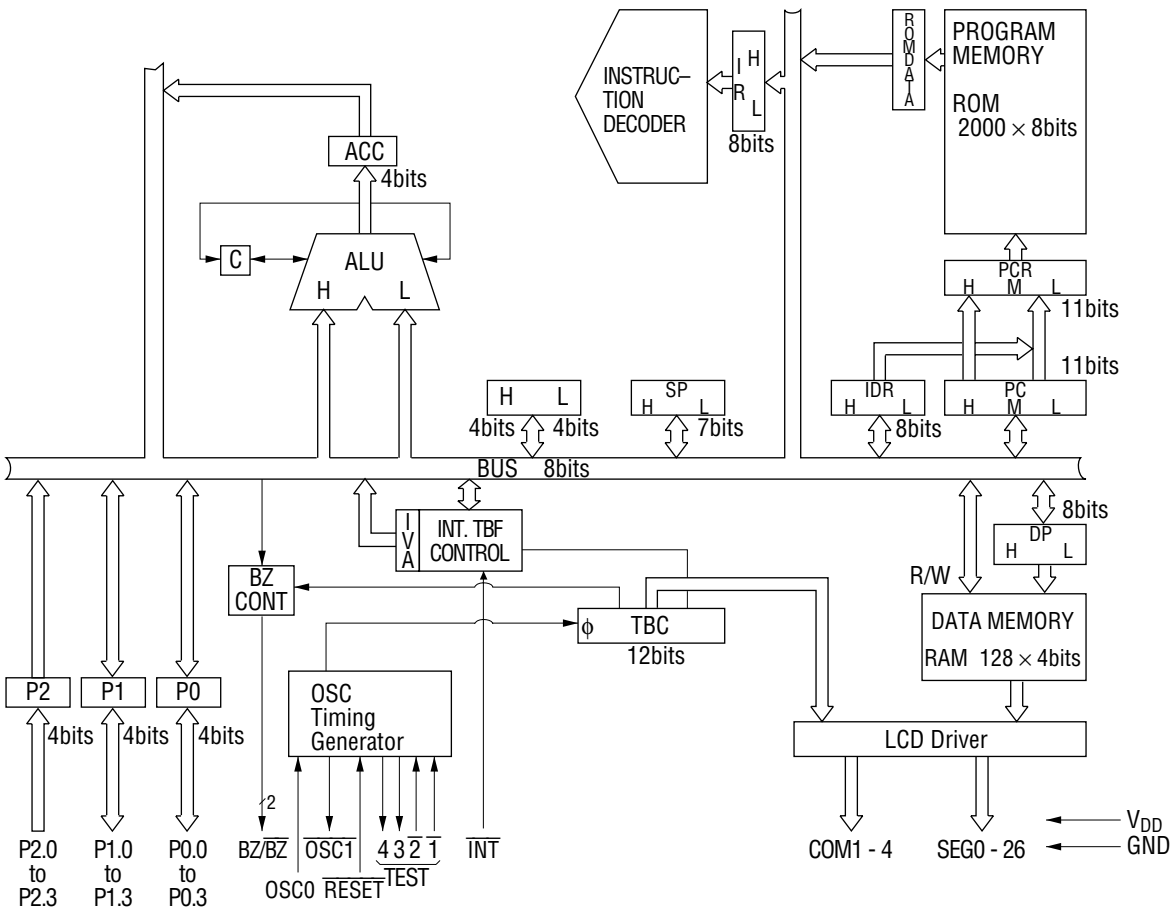

The MSM6502B/6512 is a low-power, 4-bit microcontroller implemented in complementary metal-oxide semiconductor technology.

The device is ideally suited to battery-powered systems such as watches and game machines because it can directly drive LCDs with up to 108 picture elements.

#### FEATURES

- ROM : 2000 words × 8 bits
  - RAM : 128 words × 4 bits
  - Number of instructions : 68
  - Clock oscillation : Crystal 32.768 kHz
  - Cycle time : 91.5 μs
  - Timer interrupt : Dual (16,128 Hz)
  - I/O port
    - Input-output port : 2 ports × 4 bits
    - Input port : 1 port × 4 bits
  - LCD drive : 108 (4 × 27) picture elements
  - Buzzer : 2000/1000/512 Hz/Soft
  - Interrupt : Three sources (external; two timer sources)
  - Stack : Nesting RAM  
Stack pointer = 7 bits
  - Power down : Halt mode available
  - Operating power supply voltage : 2.4 V to 3.6 V
  - Package options:
    - 56-pin plastic QFP (QFP56-P-910-0.65-K) : (Product name : MSM6502B-xxxGS-K,  
MSM6512-xxxGS-K)
    - 56-pin plastic QFP (QFP56-P-910-0.65-2K) : (Product name : MSM6502B-xxxGS-2K,  
MSM6512-xxxGS-2K)
- xxx indicates the code number.

**PIN DESCRIPTIONS (Continued)**

<b>Pin</b>	<b>Symbol</b>	<b>Description</b>
29 to 48 50 to 56 25 to 28	LCD Drive Pins SEG 0 to 26 COM 1 to 4	A special AC waveform designed to comply with liquid-crystal properties is required for liquid-crystal-drive purposes. The MSM6502B/6512 is equipped with a 1/4 duty, 1/3 bias liquid-crystal-drive circuit with four common output ports and 27 segments, to enable displays of up to 108 picture elements. On/off selection of picture elements involves writing "0" or "1" to the corresponding bits in the RAM 00H to 1AH display area, and subsequent automatic hardware controlled display. The frame frequency is 64 Hz.
13,14	BZ/ $\overline{\text{BZ}}$	BZ and $\overline{\text{BZ}}$ are used in the generation of alarms and other sounds. The selectable frequencies include three hardware frequencies (TBC output) of 512, 1024, and 2048 Hz, and a software type based on P5.0 data. These frequencies are selected at P3. When one of the hardware frequencies is selected by P3, output of that frequency is continuous. But selection of the software type results in output of the P5.0 contents to generate a melody by program.

**Notes for Mounting the Surface Mount Type Package**

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage. Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).
