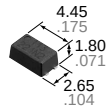
UL pending CSA pending

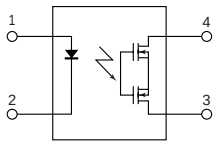
NAiS

RF (Radio Frequency) C × R 10 SSOP Type (by)

PhotoMOS RELAYS



mm inch

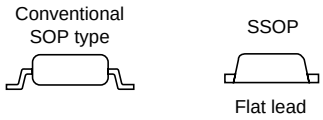


FEATURES

1. Reduced package size
Lower surface has been reduced 60% and mounting space 40% compared to conventional 4-pin SOP type.

2. Lower output capacitance and on-resistance
Output capacitance(C): 1.0pF (typ.)
ON resistance(R): 9.5Ω (typ.)

3. Mounting space has been reduced and output signals have been improved by using new flat lead terminals.



4. High speed switching
Turn on time: 0.02ms
Turn off time: 0.02ms

TYPICAL APPLICATIONS

Measuring and testing equipment
1. Test equipment
   IC tester, Liquid crystal driver tester, semiconductor performance tester
2. Board tester
   Bear board tester, In-circuit tester, function tester
3. Medical equipment
   Ultrasonic wave diagnostic machine
4. Multi-point recorder
   Warping, thermo couple

TYPES

Circuit arrangement	Type	Output rating*		Tape and reel packing style		Packing quantity in tape and reel
		Load voltage	Load current	Picked from the 1/4-pin side	Picked from the 2/3-pin side	
1 Form A	AC/DC type	40 V	120 mA	AQY221N2VY	AQY221N2VW	3,500 pcs.

* Indicate the peak AC and DC values.
Notes: (1)Tape package is the standard packing style.
(2)For space reasons, the initial letters of the product number “AQY and V”, the package type indicator “Y” and “W” are omitted from the seal.

RATING

1. Absolute maximum ratings (Ambient temperature: 25°C 77°F)

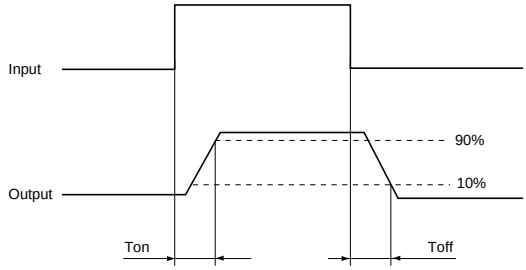
Item		Symbol	AQY221N2V	Remarks
Input	LED forward current	I_F	50mA	
	LED reverse voltage	V_R	3V	
	Peak forward current	I_{FP}	1A	f=100 Hz, Duty factor=0.1%
	Power dissipation	P_{in}	75mW	
Output	Load voltage (peak AC)	V_L	40V	
	Continuous load current (peak AC)	I_L	0.12A	Peak AC,DC
	Peak load current	I_{peak}	0.3A	100 ms (1 shot), V_L= DC
	Power dissipation	P_{out}	250mW	
Total power dissipation		P_T	300mW	
I/O isolation voltage		V_{iso}	1,500V AC	
Temperature limits	Operating	T_{opr}	–40°C to +85°C –40°F to +185°F	Non-condensing at low temperatures
	Storage	T_{stg}	–40°C to +100°C –40°F to +212°F	

2. Electrical characteristics (Ambient temperature: 25°C 77°F)

Item				Symbol	AQY221N2V	Condition
Input	LED operate current		Typical	I_{Fon}	1.0 mA	I_L = 80 mA
			Maximum		3.0 mA	
	LED turn off current		Minimum	I_{Foff}	0.2 mA	I_L = 80 mA
			Typical		0.9 mA	
	LED dropout voltage		Typical	V_F	1.14 V (1.35 V at I_F = 50mA)	I_F = 5mA
			Maximum		1.5 V	
Output	On resistance		Typical	R_{on}	9.5Ω	I_F = 5mA I_L = 80 mA Within 1 s on time
			Maximum		12.5Ω	
	Output capacitance		Typical	C_{out}	1.0 pF	I_F = 0 V_B = 0 V f = 1 MHz
			Maximum		1.5 pF	
	Off state leakage current		Typical	I_{Leak}	0.01 nA	I_F = 0 V_L = Max.
			Maximum		10 nA	
Transfer characteristics	Switching speed	Turn on time*	Typical	T_{on}	0.02 ms	I_F = 5mA V_L = 10V R_L = 125Ω
			Maximum		0.5ms	
		Turn off time*	Typical	T_{off}	0.02ms	I_F = 5mA V_L = 10V R_L = 125Ω
			Maximum		0.2 ms	
	I/O capacitance		Typical	C_{iso}	0.8 pF	f = 1MHz V_B = 0
			Maximum		1.5 pF	
	Initial I/O isolation resistance		Minimum	R_{iso}	1,000MΩ	500V DC

Note: Recommendable LED forward current I_F = 5 mA.
For type of connection, see Page 5.

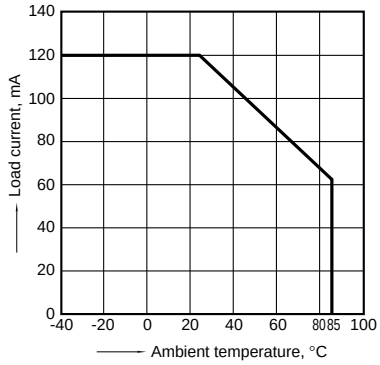
*Turn on/Turn off time



REFERENCE DATA

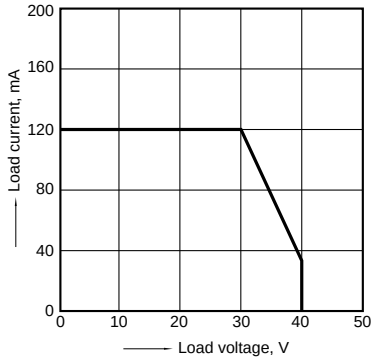
1. Load current vs. ambient temperature characteristics

Allowable ambient temperature: –40°C to +85°C
–40°F to +185°F



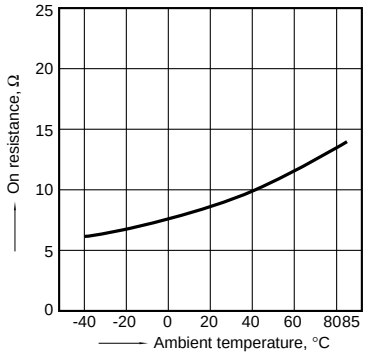
2. Load current vs. Load voltage characteristics

Ambient temperature: 25°C 77°F

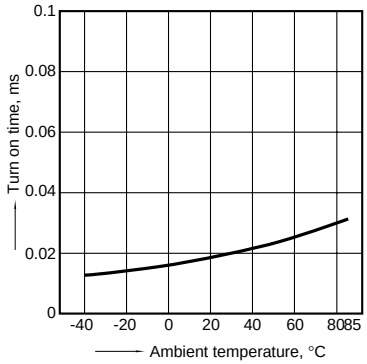


3. On resistance vs. ambient temperature characteristics

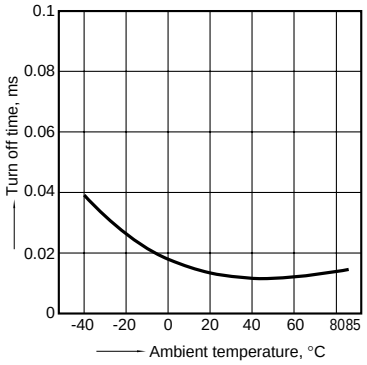
Measured portion: between terminals 3 and 4
LED current: 5 mA; Load voltage: Max. (DC);
Load current: 80mA (DC)



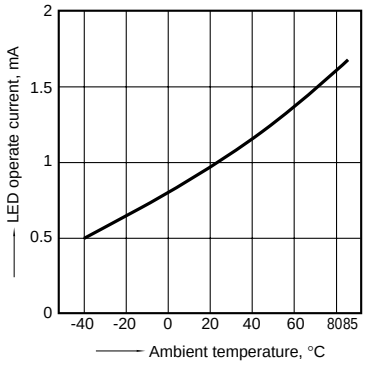
4. Turn on time vs. ambient temperature characteristics
Measured portion: between terminals 3 and 4
LED current: 5 mA; Load voltage: 10V (DC);
Continuous load current: 80mA (DC)



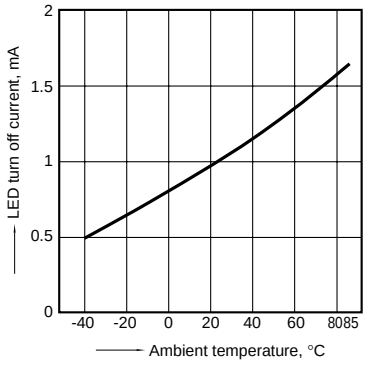
5. Turn off time vs. ambient temperature characteristics
LED current: 5 mA; Load voltage: 10V (DC);
Continuous load current: 80mA (DC)



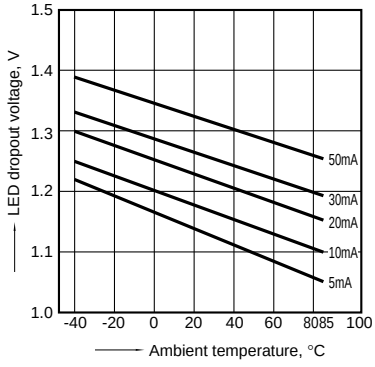
6. LED operate current vs. ambient temperature characteristics
Load voltage: Max. (DC);
Continuous load current: 80mA (DC)



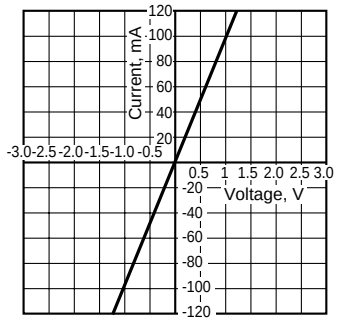
7. LED turn off current vs. ambient temperature characteristics
Load voltage: Max. (DC);
Continuous load current: 80mA (DC)



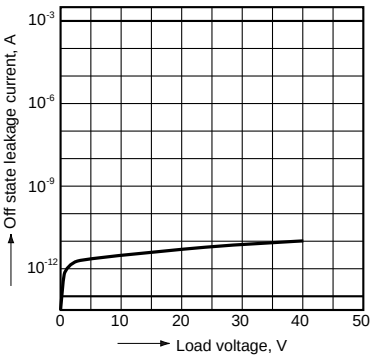
8. LED dropout voltage vs. ambient temperature characteristics
LED current: 5 to 50 mA



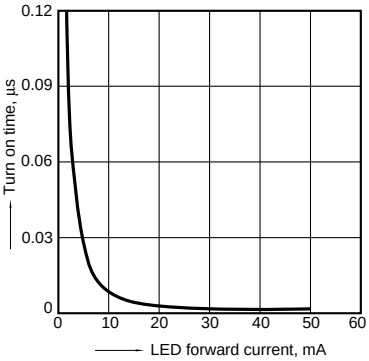
9. Voltage vs. current characteristics of output at MOS portion
Measured portion: between terminals 3 and 4
Ambient temperature: 25°C 77°F



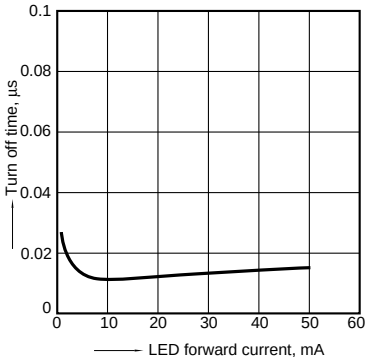
10. Off state leakage current
Measured portion: between terminals 3 and 4
Ambient temperature: 25°C 77°F



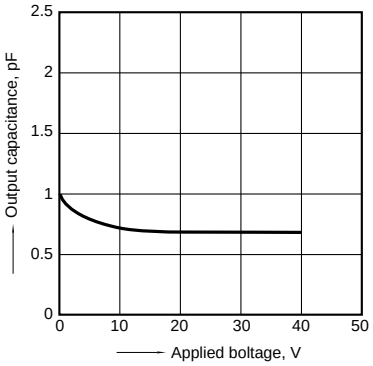
11. LED forward current vs. turn on time characteristics
Measured portion: between terminals 3 and 4
Load voltage: 10V (DC); Continuous load current: 80mA (DC); Ambient temperature: 25°C 77°F



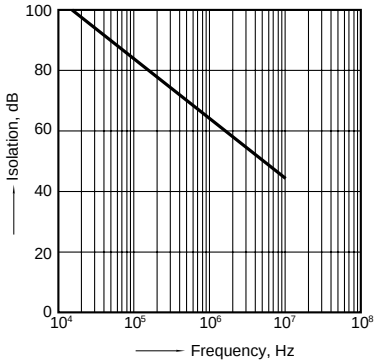
12. LED forward current vs. turn off time characteristics
Measured portion: between terminals 3 and 4
Load voltage: 10V (DC); Continuous load current: 80mA (DC); Ambient temperature: 25°C 77°F



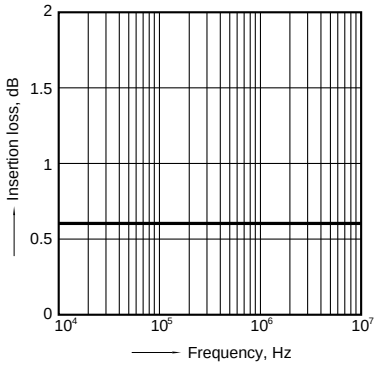
13. Applied voltage vs. output capacitance characteristics
Measured portion: between terminals 3 and 4
Frequency: 1 MHz, 30m Vrms; Ambient temperature: 25°C 77°F



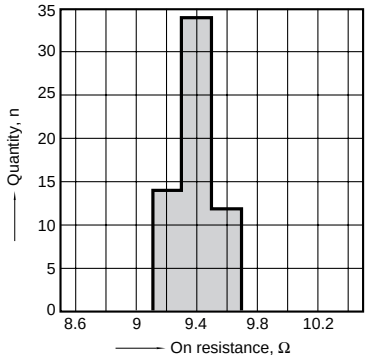
14. Isolation characteristics (50Ω impedance)
Measured portion: between terminals 3 and 4
Ambient temperature: 25°C 77°F



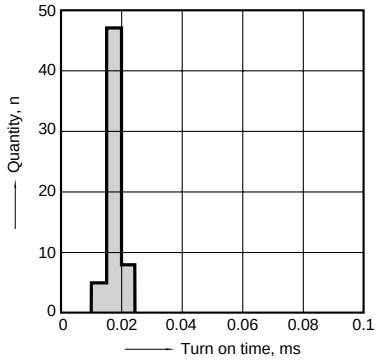
15. Insertion loss characteristics (50Ω impedance)
Measured portion: between terminals 3 and 4
Ambient temperature: 25°C 77°F



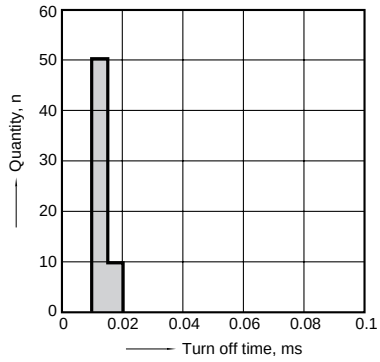
16. On resistance distribution
Measured portion: between terminals 3 and 4
Continuous load current: 80mA (DC)
Quantity, n=60; Ambient temperature: 25°C 77°F



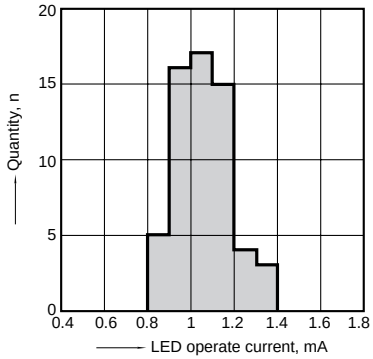
17. Turn on time distribution
Load voltage: 10V (DC)
Continuous load current: 80mA (DC)
Quantity, n = 60; Ambient temperature: 25°C 77°F



18. Turn off time distribution
Load voltage: 10V (DC)
Continuous load current: 80mA (DC)
Quantity, n = 60; Ambient temperature: 25°C 77°F

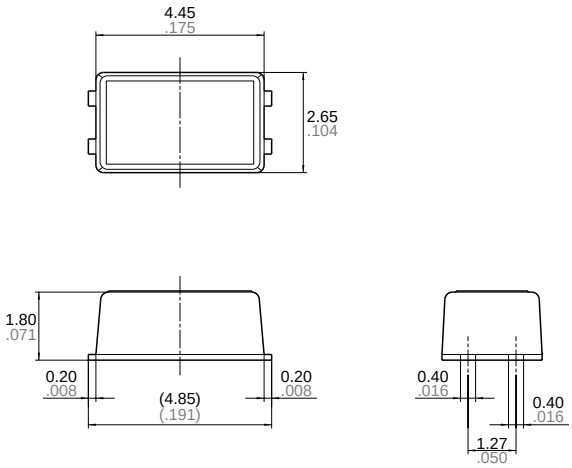


19. LED operate current distribution
Load voltage: 10V (DC)
Continuous load current: 80mA (DC)
Quantity, n = 60; Ambient temperature: 25°C 77°F

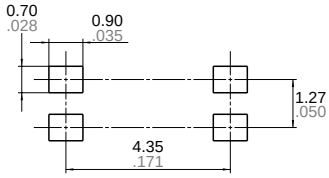


DIMENSIONS

mm inch



Recommended mounting pad (TOP VIEW)



Tolerance:±0.1 ±.004

Terminal thickness = 0.15 .006
General tolerance: ±0.1 ±.004

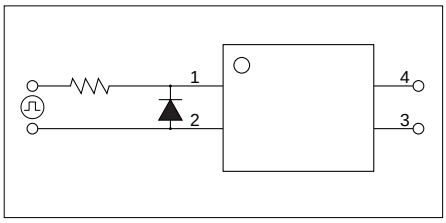
SCHEMATIC AND WIRING DIAGRAMS

Notes: 1. E_1: Power source at input side; V_{IN}: Input voltage; I_F: LED forward current; I_{IN}: Input current; V_L: Load voltage; I_L: Load current

Schematic	Output configuration	Load	Wiring diagram
	1a	AC/DC	
CAUTIONS FOR USE

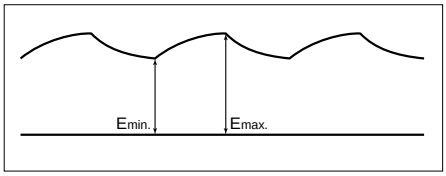
1. Short across terminals
Do not short circuit between terminals when relay is energized. There is possibility of breaking the internal IC.

2. Surge voltages at the input
If reverse surge voltages are present at the input terminals, connect a diode in reverse parallel across the input terminals and keep the reverse voltages below the reverse breakdown voltage.

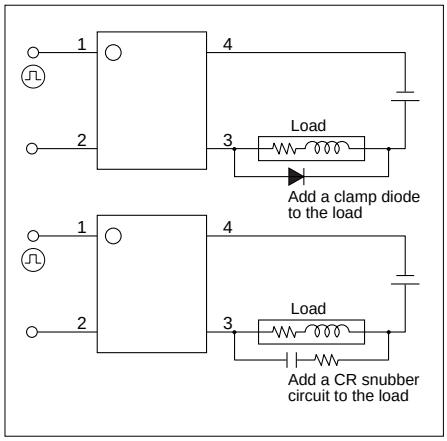


3. Recommended LED forward current (I_F)
It is recommended that the LED forward current (I_F) be kept at 5mA.

4. Ripple in the input power supply
If ripple is present in the input power supply, observe the following:
1) For LED operate current at E_{min}, maintain the value mentioned in the table of "3. Recommended LED forward current (I_F)."
2) Keep the LED operate current at 50 mA or less at E_{max}.



5. Output spike voltages
1) If an inductive load generates spike voltages which exceed the absolute maximum rating, the spike voltage must be limited.
Typical circuits are shown below.



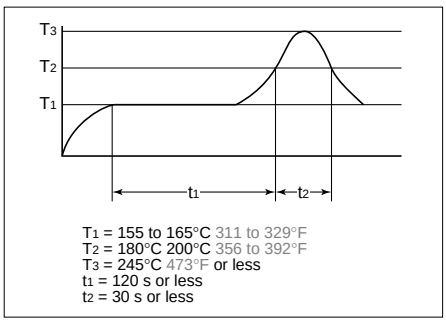
2) If spike voltages generated at the load are limited with a clamp diode and the circuit wires are long, spike voltages will occur by inductance.
Keep wires as short as possible to minimize inductance.

6. Cleaning solvents compatibility
Dip cleaning with an organic solvent is recommended for removal of solder flux, dust, etc. Select a cleaning solvent from the following table. If ultrasonic cleaning is used, the severity of factors such as frequency, output power and cleaning solvent selected may cause loose wires and other defects. Make sure these conditions are correct before use. For details, please consult us.

Cleaning solvent		Compatibility (❍: Yes ✕: No)
Chlorine base	• Trichlene • Chloroethlene	❍
Adueous	• Indusco • Hollis • Lonco Terg	❍
Alcohol base	• IPA • Ethanol	❍
Others	• Thinner • Gasoline	✕

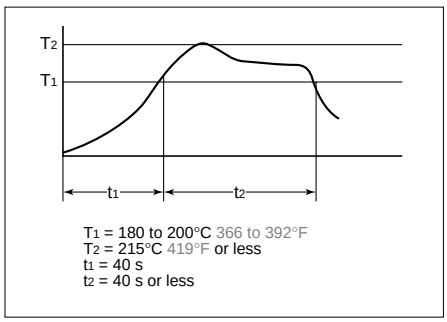
7. Soldering
When soldering this terminals, the following conditions are recommended.

(1) IR (Infrared reflow) soldering method



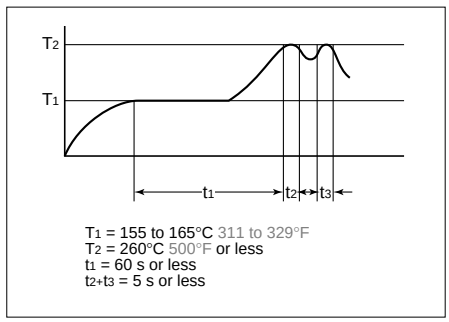
T_1 = 155 to 165°C 311 to 329°F
T_2 = 180°C 200°C 356 to 392°F
T_3 = 245°C 473°F or less
t_1 = 120 s or less
t_2 = 30 s or less

(2) Vapor phase soldering method



T_1 = 180 to 200°C 366 to 392°F
T_2 = 215°C 419°F or less
t_1 = 40 s
t_2 = 40 s or less

(3) Double wave soldering method



T_1 = 155 to 165°C 311 to 329°F
T_2 = 260°C 500°F or less
t_1 = 60 s or less
t_2+t_3 = 5 s or less

(4) Soldering iron method
Tip temperature: 280 to 300°C
536 to 572°F
Wattage: 30 to 60 W
Soldering time: within 5 s

(5) Others
Check mounting conditions before using other soldering methods (hot-air, hot plate, pulse heater, etc.)
• The temperature profile indicates the temperature of the soldered terminal on the surface of the PC board. The ambient temperature may increase excessively. Check the temperature under mounting conditions.
• The conditions for the infrared reflow soldering apply when preheating using the VPS method.

8. The following shows the packaging format

1) Tape and reel

mm inch

Type	Tape dimensions	Dimensions of paper tape reel
SSOP 4-pin type		
(1) When picked from 1/4-pin side: Part No. AQY❍❍❍VY (Shown above)
(2) When picked from 2/3-pin side: Part No. AQY❍❍❍VW

2) Storage

PhotoMOS relays implemented in SSOP types are sensitive to moisture and come in sealed moisture-proof packages. Observe the following cautions on storage.

• After the moisture-proof package is unsealed, take the devices out of storage as soon as possible (within 1 month at the most).

• If the devices are to be left in storage for a considerable period after the moisture-proof package has been unsealed, it is recommended to keep them in another moisture-proof bag containing silica gel (within 3 months at the most).

9. Transportation and storage

1) Extreme vibration during transport will warp the lead or damage the relay. Handle the outer and inner boxes with care.

2) Storage under extreme conditions will cause soldering degradation, external appearance defects, and deterioration of the characteristics. The following storage conditions are recommended:

• Temperature: 0 to 45°C 32 to 113°F

• Humidity: Less than 70% R.H.

• Atomosphere: No harmful gasses such as sulfurous acid gas, minimal dust.

10. Applying stress that exceeds the absolute maximum rating

If the voltage or current value for any of the terminals exceeds the absolute maximum rating, internal elements will deteriorate because of the excessive voltage or current. In extreme cases, wiring may melt, or silicon P/N junctions may be destroyed.

As a result, the design should ensure that the absolute maximum ratings will never be exceeded, even momentarily.

(Use at 15 V DC or lower and 9 V DC or lower is recommended.)

11. Deterioration and destruction caused by discharge of static electricity

This phenomenon is generally called static electricity destruction. This occurs when static electricity generated by various factors is discharged while the relay terminals are in contact. The result can producing internal destruction of the element.

To prevent problems from static electricity, the following precautions and measures should be taken when using your device.

1) Employees handling relays should wear anti-static clothing and should be grounded through protective resistance of 500 kΩ to 1 MΩ.

2) A conductive metal sheet should be placed over the work table. Measuring instruments and jigs should be grounded.

3) When using soldering irons, either use irons with low leakage current, or ground the tip of the soldering iron. (Use of low-voltage soldering irons is also recommended.)

4) Devices and equipment used in assembly should also be grounded.

5) When packing printed circuit boards and equipment, avoid using high-polymer materials such as foam styrene, plastic, and other materials which carry an electrostatic charge.

6) When storing or transporting relays, the environment should not be conducive to generating static electricity (for instance, the humidity should be between 45 and 60%). Relays should always be protected using non-conductive packing materials.
