(Note 1) : Do not apply a signal to any bus terminal when it is in the output mode. Damage may result.
(Note 2) : All floating (high impedance) bus terminal must have their input level fixed by means of pull up or pull down resistors.
(Note 3) : To ensure the high-impedance state during power up or power down, $\overline{OE}$ should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.
