The MC10EP16 is a differential receiver. The device is functionally equivalent to the EL16 and LVEL16 devices with higher performance capabilities. With output transition times significantly faster than the EL16 and LVEL16, the EP16 is ideally suited for interfacing with high frequency sources.

The EP16 provides a  $V_{BB}$  output for either single-ended use or as a DC bias for AC coupling to the device within the package. The  $V_{BB}$  pin should be used only as a bias for the EP16 as its current sink/source capability is limited. Whenever used, the  $V_{BB}$  pin should be bypassed to ground via a 0.01 $\mu$ f capacitor.
