## Description

M/A-COM's MASWSS0166 is a GaAs monolithic switch in a lead-free SOT-363 surface mount plastic package. The MASWSS0166 is ideally suited for applications where very low power consumption, low insertion loss, very small size and low cost are required.

Typical applications are dual band systems that require switching between small signal components such as filter banks, single band LNA's and converters. The MASWSS0166 can be used in applications up to 0.25 Watts in systems such as cellular, PCS, DCS1800, GSM, CDMA, W-CDMA and other analog/digital wireless communications systems.

The MASWSS0166 is fabricated using a mature 0.5 micron GaAs PHEMT process. The process features full passivation for increased performance and reliability.

## Absolute Maximum Ratings ${ }^{1,2}$

| Parameter | Absolute Maximum |
| :---: | :---: |
| Input Power (0.5-3.0 GHz) | +30 dBm |
| 3 V Control |  |
| 5 V Control | +33 dBm |

1. Exceeding any one or combination of these limits may cause permanent damage to this device.
2. $M / A-C O M$ does not recommend sustained operation near these survivability limits.
