

GENERAL DESCRIPTION

The EV1593DN-00A is the Evaluation Board for MPS' MP1593 Step-Down DC/DC Converter. It features a wide supply range of 4.75V to 28V and a continuous output current up to 3A. The output voltage is set to 3.3V, but can be easily adjusted to other levels from 1.22V. A 385KHz high switching frequency allows the use of small, low cost capacitors and inductors. Current mode control and an integrated power MOSFET minimize component count, board area, and solution cost. Fault condition protection includes cycle-by-cycle current limiting, thermal shutdown, and under-voltage lockout. Internal soft-start reduces the turn-on stress. The small but thermally enhanced 8-pin SOIC package minimizes board area and provides excellent thermal management.

QUICK START GUIDE

1. Connect the positive terminal of the load to VOUT pins, and the negative terminal of the load to GND pins
2. Preset the power supply output to 4.75V – 28V and turn off the power supply.
3. Connect the positive terminal of the power supply output to the VIN pin and the negative terminal of the power supply output to the GND pin
4. Turn the power supply on. The MP1593 will automatically startup.
5. To use the Enable function, apply a digital input to EN pin. Drive EN higher than 2.5V to turn on the regulator, drive EN less than 0.7V to turn it off.
6. An input under voltage lockout (UVLO) function can be implemented by the addition of a resistor divider R4 and R5.

The EN threshold is 2.5V, so V_{IN} UVLO threshold is $\left(1 + \frac{R4}{R5}\right) \times 2.5V$.

RECOMMENDED COMPONENTS FOR STANDARD OUTPUT VOLTAGES

The output voltage of this board is set to 3.3V. This board is laid out to accommodate most commonly used inductors and output capacitors and to be programmed for most standard output voltages. The following table lists recommended components for some standard output voltages.

Listed compensation components (R2, C3) values are based on the output capacitor installed on this board. For other capacitors, refer to the Application Information section in the MP1593 datasheet.

Table 1—Recommended Components for Standard Output Voltages

VOUT	R1	R2	C3	L1
1.8V	4.75kΩ	3kΩ	4.7nF	4.7μH
2.5V	10.5kΩ	3.9kΩ	5.6nF	4.7-6.8μH
3.3V	16.9kΩ	5.6kΩ	8.2nF	6.8-10μH
5V	30.9kΩ	7.5kΩ	10nF	10-15μH
12V	88.7kΩ	10kΩ	3.3nF	15-22μH
