

STV7697A

PLASMA DISPLAY PANEL SCAN DRIVER

FEATURES

- 64 OUTPUTS PLASMA DISPLAY DRIVER
- 170V ABSOLUTE MAXIMUM SUPPLY
- 5V SUPPLY FOR LOGIC
- 100/400 mA SOURCE / SINK OUTPUT
- 700 mA SOURCE / SINK OUTPUT DIODE
- 64-BIT SHIFT REGISTER (20 MHz)
- BLANK CONTROL
- COMPLEMENTARY OUTPUT CONTROL
- BCD TECHNOLOGY
- 100 PINS PQFP PACKAGE OR DICE.

DESCRIPTION

The STV7697A is a scan driver for Plasma Display Panel (PDP) implemented in ST's proprietary BCD technology. Using a 64-bit cascadable 20 MHz shift register, it drives 64 high current & high voltage outputs. By serially connecting several STV7697A, any vertical pixel definition can be performed. The STV7697A is supplied with a separated 160V power output supply and a 5V logic supply. All command inputs are CMOS compatible.

The STV769 7A package is a 100 pins PQFP.

PQFP100 (14 x 20 x 2.80 mm)
(Full Plastic Quad Flat Pack)

ORDER CODE: STV7697A

ORDER CODE: STV7697A/WAF (1)
(1): Unsawn Tested Wafer

BLOCK DIAGRAM

CIRCUIT DESCRIPTION

The STV7697A contains all the logic and the power circuits necessary to drive rows of a Plasma Display Panel (P. D. P.). The state of the displayed line is loaded into the shift register. Data are shifted at each low to high transition of the (CLK) shift clock. After 64 shifts the first bit is available at the serial output. This output can be used to cascade several drivers to perform any vertical resolution.

The forward / reverse (F/R) input is used to select the direction of the shift register, data input/output status is set according to the selected direction. SIN, CLK, STB inputs

are Smith trigger inputs . If not used on the application, F/R, BLK, POL logical inputs are internally pulled to level "1". The maximum frequency of the shift clock is 20 MHz.

All the data are memorized into the latch stage when the strobe input (STB) is pulled high.

Blanking input (BLK) forces the power outputs to high level when pulled high with polarity input

(POL) at high level and forced to low level with POL at low level.

The level of the power output is inverted when the polarity command (POL) is pulled high.

Sustain current must not be sunk in the power output to VPP when the power supply is applied.

VSSLOG and VSSSUB must be connected as close as possible to the logical reference ground of the application.

Shift Register Truth Table

Input		Input/Output		Shift Register Function
F/R	CLK	SIN	SOUT	Output Q
H	Rise	IN	OUT	Forward Shift
H	H or L	IN	OUT	Steady
L	Rise	OUT	IN	Reverse Shift
L	H or L	OUT	IN	Steady

Power Output Truth Table

Qn (1)	STB	BLK	POL	Driver Output	Comments
X	X	H	H	All H	Forced to High
X	X	H	L	All L	Forced to Low
H	L	L	L	H	Copy Data
L	L	L	L	L	Copy Data
H	L	L	H	L	Copy Inverted Data
L	L	L	H	H	Copy Inverted Data
X	H	L	L	Qn	Data Latched
X	H	L	H	\overline{Qn}	Inverted Data Latched

Note 1 Qn is the parallel output of the shift register (n = 1 to 64). Qn takes the value of serial input (SIN) after "n" shift clock periods.

ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Value	Unit
V _{CC}	Logic Supply Range	-0.3, +7	V
V _{PP}	Driver Supply Range	-0.3, +170	V
V _{IN}	Logic Input Voltage Range	-0.3, V _{CC} + 0.3	V
V _{OUT}	Logic Output Voltage Range	-0.3, V _{CC} + 0.3	V
V _{POUT}	Driver Output Voltage Range	-0.3, V _{PP}	V
I _{POUT}	Driver Output Current (3) (5)	+100/-400	mA
I _{DOUT}	Diode Output Current (4) (5)	±700	mA
T _{jmax}	Operating Temperature	-20, +85	°C
T _{oper}	Junction Temperature (2)	+125	°C
T _{stg}	Storage Temperature	-50,+150	°C

THERMAL DATA

Symbol	Parameter	Value	Unit
R _{th(j-a)}	Junction-ambient Thermal Resistance (2)	Max 50	°C/W
P _{oper}	Operating Power Dissipation (T _{amb} = 25°C)	Max 2	W
T _{joper}	Operating Junction Temperature (2)	Max +125	°C

Note 2 For PQFP100 packaging.

Note 3 Through one power output.

Note 4 Through one power output with V_{PP} = V_{SSP} (see test diagram).

Note 5 These parameters are measured during ST's internal qualification which includes temperature characterisation on standard batches and on corners batches of the process. These parameters are not tested on the parts.

ELECTRICAL CHARACTERISTICS

($V_{CC} = 5\text{ V}$, $V_{PP} = 160\text{ V}$, $V_{SSP} = 0\text{ V}$, $V_{SSLOG} = V_{SSSUB} = 0\text{ V}$, $T_{amb} = 25^{\circ}\text{C}$, $f_{CLK} = 20\text{ MHz}$, unless otherwise specified)
