

Digital Output**CLA90
CLA90AA****High Voltage
Axial Lead Isolators**

GENERAL DESCRIPTION — The Clairex Electronics CLA90 series isolator features axial lead construction for high isolation voltage of 10KV D.C. minimum. The construction of the isolator provides an internal minimum distance of 5mm between the emitter case and detector case. Both the infrared LED emitter and the integrated circuit photodetector are hermetically sealed units. The integrated circuit photodetector consists of a photodiode sensor, operational amplifier and a Schmitt trigger driving an open collector NPN transistor allowing for maximum application flexibility. An internal voltage regulator allows a 4-15 volt supply range. With the addition of a pull up resistor of the IC output can be made TTL compatible.

ABSOLUTE MAXIMUM RATINGS

Maximum Storage and Operating Temperature — 40°C to 70°C

EMITTER**Power Dissipation**

At 25°C ambient = 150mw

Continuous Forward Current = 40mA

Derate 2mw/°C

DETECTOR**Power Dissipation**
At 25°C = 300mw

Derate 2mw/°C

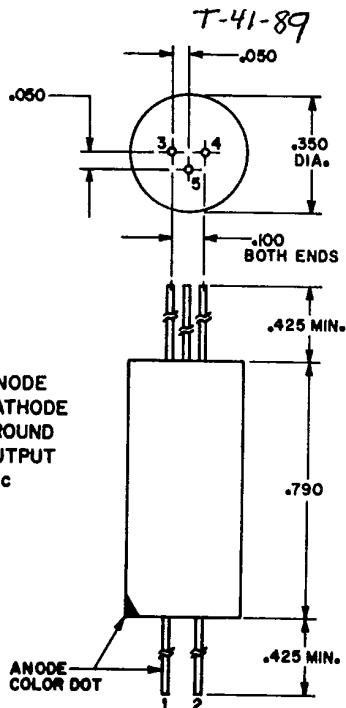

Maximum VoltagesV_{cc} = 15 volts at 25°C

Maximum Output Current = 50mA at 25°C
