MSM518205

4,194,304-Word × 2-Bit DYNAMIC RAM : FAST PAGE MODE TYPE WITH EDO

DESCRIPTION

The MSM518205 is a 4,194,304-word × 2-bit dynamic RAM fabricated in Oki's silicon-gate CMOS technology. The MSM518205 achieves high integration, high-speed operation, and low-power consumption because Oki manufactures the device in a quadruple-layer polysilicon/double-layer metal CMOS process. The MSM518205 is available in a 26/24-pin plastic SOJ or 26/24-pin plastic TSOP.

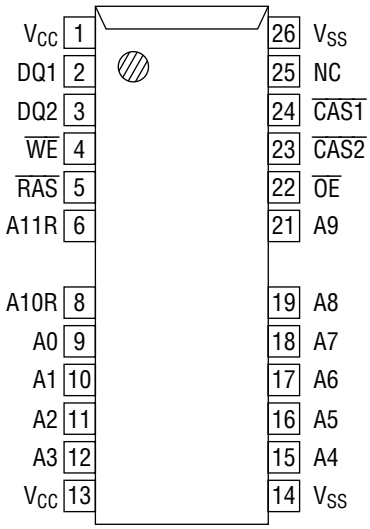
FEATURES

- 4,194,304-word × 2-bit configuration
- Single 5 V power supply, ±10% tolerance
- Input : TTL compatible, low input capacitance
- Output : TTL compatible, 3-state
- Refresh : 4096 cycles/64 ms
- Fast page mode with EDO, read modify write capability
- $\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ refresh, hidden refresh, $\overline{\text{RAS}}$-only refresh capability
- Multi-bit test mode capability
- Package options:
  26/24-pin 300 mil plastic SOJ (SOJ26/24-P-300-1.27) (Product : MSM518205-xxSJ)
  26/24-pin 300 mil plastic TSOP (TSOPII26/24-P-300-1.27-K) (Product : MSM518205-xxTS-K)
  xx indicates speed rank.

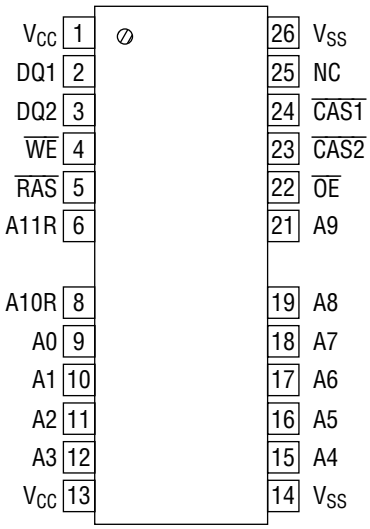
PRODUCT FAMILY

Family	Access Time (Max.)				Cycle Time (Min.)	Power Dissipation	
	t_{RAC}	t_{AA}	t_{CAC}	t_{OEA}		Operating (Max.)	Standby (Max.)
MSM518205-60	60 ns	30 ns	15 ns	15 ns	110 ns	385 mW	5.5 mW
MSM518205-70	70 ns	35 ns	20 ns	20 ns	130 ns	358 mW	
MSM518205-80	80 ns	40 ns	20 ns	20 ns	150 ns	330 mW	

PIN CONFIGURATION (TOP VIEW)



26/24-Pin Plastic SOJ

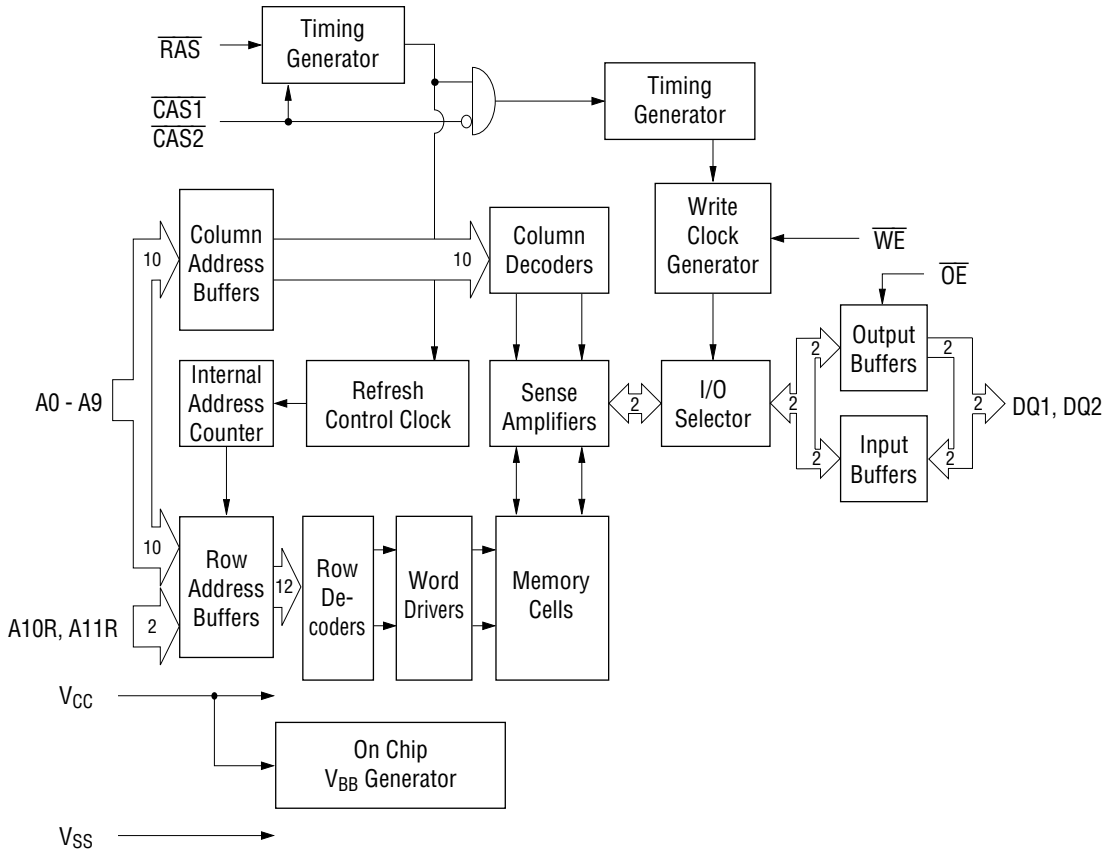


26/24-Pin Plastic TSOP
(K Type)

Pin Name	Function
A0 - A9, A10R, A11R	Address Input
$\overline{RAS}$	Row Address Strobe
$\overline{CAS1}$, $\overline{CAS2}$	Column Address Strobe
DQ1, DQ2	Data Input/Data Output
$\overline{OE}$	Output Enable
$\overline{WE}$	Write Enable
V_{CC}	Power Supply (5 V)
V_{SS}	Ground (0 V)
NC	No Connection

Note : The same power supply voltage must be provided to every V_{CC} pin, and the same GND voltage level must be provided to every V_{SS} pin.

BLOCK DIAGRAM



FUNCTION TABLE

Input Pin					DQ Pin		Function Mode
$\overline{RAS}$	$\overline{CAS1}$	$\overline{CAS2}$	$\overline{WE}$	$\overline{OE}$	DQ1	DQ2	
H	*	*	*	*	High-Z	High-Z	Standby

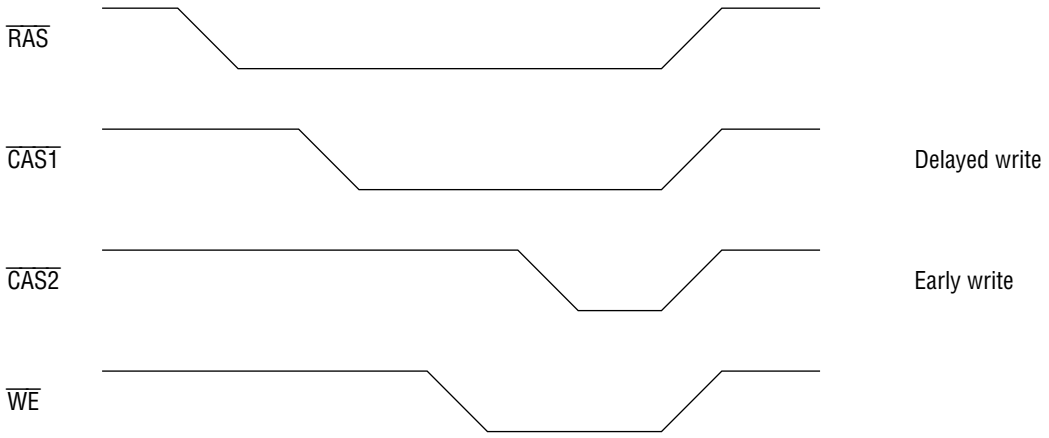
$\overline{RAS}$ to $\overline{WE}$ Hold Time (Test Mode)	t_{WTH}	20	—	20	—	20	—	ns	

Notes:
1. A start-up delay of 200 µs is required after power-up, followed by a minimum of eight initialization cycles ($\overline{RAS}$-only refresh or $\overline{CAS}$ before $\overline{RAS}$ refresh) before proper device operation is achieved.
2. The AC characteristics assume t_T = 5 ns.
3. V_{IH} (Min.) and V_{IL} (Max.) are reference levels for measuring input timing signals. Transition times (t_T) are measured between V_{IH} and V_{IL}.
4. This parameter is measured with a load circuit equivalent to 2 TTL loads and 100 pF.
5. Operation within the t_{RCD} (Max.) limit ensures that t_{RAC} (Max.) can be met. t_{RCD} (Max.) is specified as a reference point only. If t_{RCD} is greater than the specified t_{RCD} (Max.) limit, then the access time is controlled by t_{CAC}.
6. Operation within the t_{RAD} (Max.) limit ensures that t_{RAC} (Max.) can be met. t_{RAD} (Max.) is specified as a reference point only. If t_{RAD} is greater than the specified t_{RAD} (Max.) limit, then the access time is controlled by t_{AA}.
7. t_{CEZ} (Max.), t_{REZ} (Max.), t_{WEZ} (Max.) and t_{OEZ} (Max.) define the time at which the output achieves the open circuit condition and are not referenced to output voltage levels.
8. t_{CEZ} and t_{REZ} must be satisfied for open circuit condition.
9. t_{RCH} or t_{RRH} must be satisfied for a read cycle.
10. t_{WCS}, t_{CWD}, t_{RWD}, t_{AWD} and t_{CPWD} are not restrictive operating parameters. They are included in the data sheet as electrical characteristics only. If $t_{WCS} \geq t_{WCS}$ (Min.), then the cycle is an early write cycle and the data out will remain open circuit (high impedance) throughout the entire cycle. If $t_{CWD} \geq t_{CWD}$ (Min.) , $t_{RWD} \geq t_{RWD}$ (Min.), $t_{AWD} \geq t_{AWD}$ (Min.) and $t_{CPWD} \geq t_{CPWD}$ (Min.), then the cycle is a read modify write cycle and data out will contain data read from the selected cell; if neither of the above sets of conditions is satisfied, then the condition of the data out (at access time) is indeterminate.
11. These parameters are referenced to the $\overline{CAS}$ leading edge in an early write cycle, and to the $\overline{WE}$ leading edge in an $\overline{OE}$ control write cycle, or a read modify write cycle.
12. The test mode is initiated by performing a $\overline{WE}$ and $\overline{CAS}$ before $\overline{RAS}$ refresh cycle. This mode is latched and remains in effect until the exit cycle is generated. In a test mode CA0 and CA1 are not used and each DQ pin now accesses 4-bit locations. Since all 2 DQ pins are used, a total of 8 data bits can be written in parallel into the memory array. In a read cycle, if 4 data bits are equal, the DQ pin will indicate a high level. If the 4 data bits are not equal, the DQ pin will indicate a low level. The test mode is cleared and the memory device returned to its normal operating state by performing a $\overline{RAS}$-only refresh cycle or a $\overline{CAS}$ before $\overline{RAS}$ refresh cycle.
13. In a test mode read cycle, the value of access time parameters is delayed for 5 ns for the specified value. These parameters should be specified in test mode cycle by adding the above value to the specified value in this data sheet.
14. These parameters are determined by the falling edge of either $\overline{CAS1}$ or $\overline{CAS2}$, whichever is earlier.
15. These parameters are determined by the rising edge of either $\overline{CAS1}$ or $\overline{CAS2}$, whichever is later.
16. t_{CWL} should be satisfied by both $\overline{CAS1}$ and $\overline{CAS2}$.
17. t_{CP} is determined by the time both $\overline{CAS1}$ and $\overline{CAS2}$ are high.

Notes concerning $\overline{CAS1}$ and $\overline{CAS2}$ control

Overlap the active-low timings of $\overline{CAS1}$ and $\overline{CAS2}$. Skew between $\overline{CAS1}$ and $\overline{CAS2}$ is allowed under the following conditions:

(1) The timing specification for $\overline{CAS1}$ and $\overline{CAS2}$ should be met individually.
(2) Different operation modes for $\overline{CAS1}$/$\overline{CAS2}$ are not allowed (as shown below).



(3) Closely separated $\overline{CAS1}$/$\overline{CAS2}$ control is not allowed. However, when the condition ($t_{CP} \leq t_{UL}$) is satisfied, fast page mode can be performed.

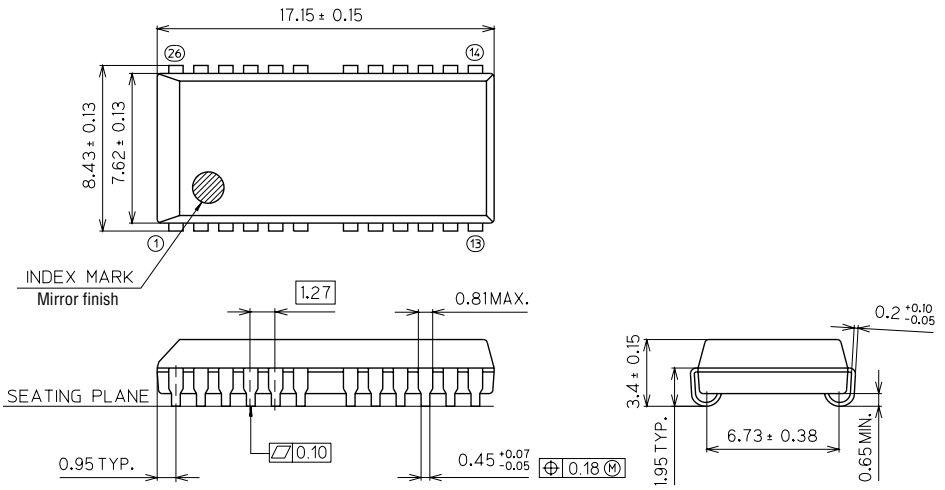
PACKAGE DIMENSIONS

(Unit : mm)

SOJ26/24-P-300-1.27



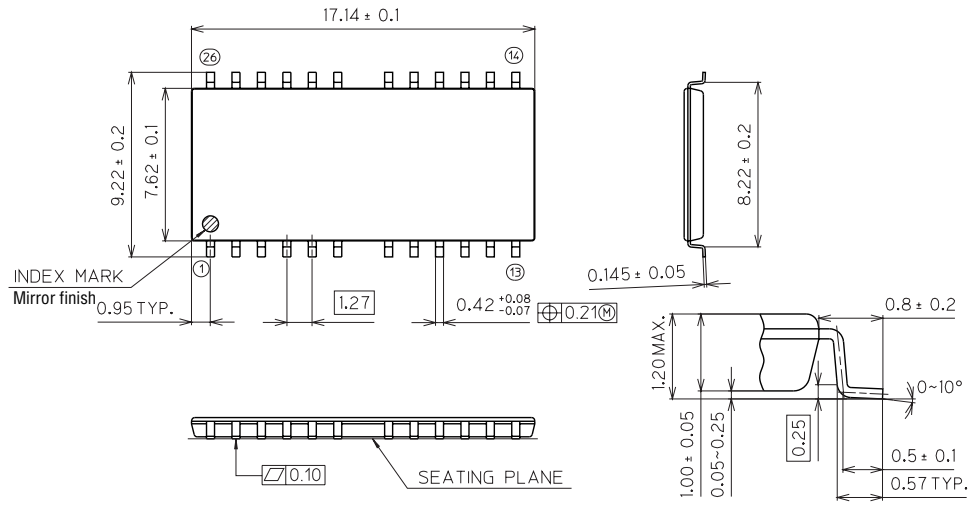
Package material	Epoxy resin
Lead frame material	42 alloy
Pin treatment	Solder plating
Solder plate thickness	5 μm or more
Package weight (g)	0.80 TYP.

Notes for Mounting the Surface Mount Type Package

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage.
Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).

(Unit : mm)

TSOPII26/24-P-300-1.27-K



Package material	Epoxy resin
Lead frame material	42 alloy
Pin treatment	Solder plating
Solder plate thickness	5 μm or more
Package weight (g)	0.29 TYP.

Notes for Mounting the Surface Mount Type Package

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage.
Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).
