

TSV321-TSV358-TSV324

General purpose input/output rail-to-rail low power operational amplifiers

Features

- Operating range $V_{CC} = 2.5V$ to $6V$
- Rail-to-rail input and output
- Extended V_{icm} ($V_{DD} - 0.2V$ to $V_{CC} + 0.2V$)
- Capable of driving a 32Ω load resistor
- High stability: $500pF$
- Available in SOT23-5 micropackage
- Operating temperature range: $-40^{\circ}C$, $+125^{\circ}C$

Applications

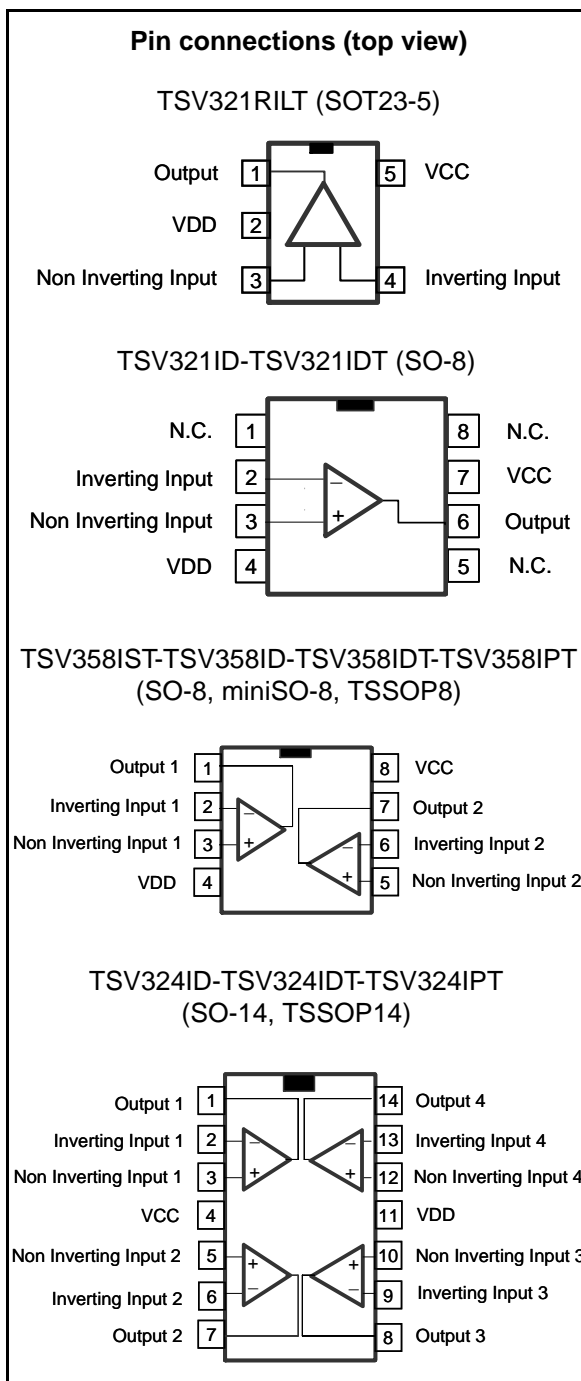

- Battery-powered applications
- Audio driver (headphone driver)
- Sensor signal conditioning
- Laptop/notebook computers

Description

The TSV358 and TSV324 (dual and quad) are low voltage versions of LM358 and LM324 commodity operational amplifiers. TSV321 is the single version. The TSV321/358/324 are able to operate with voltages as low as $2.5V$ and feature both I/O rail-to-rail.

The common mode input voltage extends $200mV$ at $25^{\circ}C$ beyond the supply voltages while the output voltage swing is within $100mV$ of each rail with 600Ω load resistor. At $V_{CC} = 3V$, these devices offer $1.3MHz$ of gain-bandwidth product and provide high output drive capability typically at $80mA$ -load.

These features make the TSV3xx family ideal for active filters, general purpose low-voltage applications, and general purpose portable devices.

1 Absolute maximum ratings and operating conditions

Table 1. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage ⁽¹⁾	7	V
V_{id}	Differential input voltage ⁽²⁾	± 1	V
V_{in}	Input voltage	$V_{DD}-0.3$ to $V_{CC}+0.3$	V
T_{stg}	Storage temperature	-65 to +150	°C
T_j	Maximum junction temperature	150	°C
R_{thja}	Thermal resistance junction to ambient ^{(3) (4)}		°C/W
	SOT23-5	250	
	SO-8	125	
	SO-14	103	
	TSSOP8	120	
	TSSOP14 MiniSO-8	100 190	
R_{thjc}	Thermal resistance junction to case		°C/W
	SOT23-5	81	
	SO-8	40	
	SO-14	31	
	TSSOP8	37	
	TSSOP14 MiniSO-8	32 39	
ESD	HBM: human body model ⁽⁵⁾	2	kV
	MM: machine model ⁽⁶⁾	200	V
	CDM: charged device model ⁽⁷⁾	1.5	kV
	Latch-up immunity	200	mA
	Lead temperature (soldering, 10s)	250	°C
	Output short-circuit duration	See note ⁽⁸⁾	

- All voltages values, except differential voltage are with respect to network terminal.
- Differential voltages are the non-inverting input terminal with respect to the inverting input terminal. If $V_{id} > \pm 1V$, the maximum input current must not exceed $\pm 1mA$. When $V_{id} > \pm 1V$, an input series resistor must be added to limit input current.
- Short-circuits can cause excessive heating and destructive dissipation.
- R_{th} are typical values.
- Human body model: 100pF discharged through a 1.5k Ω resistor between two pins of the device, done for all couples of pin combinations with other pins floating.
- Machine model: a 200pF cap is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω), done for all couples of pin combinations with other pins floating.
- Charged device model: all pins plus package are charged together to the specified voltage and then discharged directly to the ground.
- Short-circuits from the output to V_{CC} can cause excessive heating. The maximum output current is approximately 80mA, independent of the magnitude of V_{CC} . Destructive dissipation can result from simultaneous short-circuits on all amplifiers.

Table 2. Operating conditions

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage	2.5 to 6	V
V_{icm}	Common mode input voltage range $T_{op} = 25^{\circ}\text{C}$, $2.5 \leq V_{CC} \leq 6\text{V}$ $T_{min} < T_{op} < T_{max}$, $2.5 \leq V_{CC} \leq 5.5\text{V}$	$V_{DD} - 0.2$ to $V_{CC} + 0.2$ V_{DD} to V_{CC}	V
T_{oper}	Operating free air temperature range	-40 to + 125	$^{\circ}\text{C}$

2 Electrical characteristics

Table 3. Electrical characteristics at $V_{CC} = +3V$, $V_{DD} = 0V$, R_L , C_L connected to $V_{CC}/2$, and $T_{amb} = 25^\circ C$ (unless otherwise specified)

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
V_{io}	Input offset voltage	$V_{icm} = V_{out} = V_{CC}/2$ TSV321/358/324 $T_{min} < T_{op} < T_{max}$ TSV321A/358A/324A $T_{min} < T_{op} < T_{max}$		0.2 0.1	3 6 1 3	mV
ΔV_{io}	Input offset voltage drift			2		$\mu V/^\circ C$

3 Package information

In order to meet environmental requirements, STMicroelectronics offers these devices in ECOPACK[®] packages. These packages have a lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an STMicroelectronics trademark. ECOPACK specifications are available at: www.st.com.

5 Revision history

Date	Revision	Changes
2-Aug-2005	1	First release - Products in full production.
20-Sep-2005	2	Addition of TS321A/TS324A/TS358A data in tables in Section 2: Electrical characteristics on page 5 . Minor formatting and grammatical changes.
7-Dec-2005	3	Missing PPAP references inserted see Section 4: Ordering information on page 17 .
28-Jun-2007	4	Correction made on output drive capability, 80mA in description on cover page. SVR measurement conditions inserted in electrical characteristics tables. Offset voltage limit in temperature added in Section 2: Electrical characteristics on page 5 . Correction made on Input Bias Current typical value in Section 2: Electrical characteristics on page 5 . Captions of electrical characteristics figures updated. Automotive grade order codes added to Section 4: Ordering information on page 17 .
