

Slotted Optical Switch OPB806

Features:

- Non-contact switching
- Base or side mounting
- 0.125" (3.175 mm) slot width
- 0.500" (12.700 mm) lead spacing

Description:

The **OPB806** slotted optical switch consists of an infrared emitting diode (LED) and a NPN silicon phototransistor, mounted on opposite sides of a 0.125" (3.175 mm) wide slot.

The **OPB806** has two sets of mounting tabs allowing Base or Side mounting of the device. The LED and phototransistor leads project from each side of the housing on 0.050" (1.27 mm) centers.

Phototransistor switching takes place whenever an opaque object passes through the slot.

Custom electrical, wire and cabling and connectors are available. Contact your local representative or OPTEK for more information.

Applications:

- Non-contact interruptive object sensing
- Assembly line automation
- Machine automation
- Equipment security
- Machine safety
