September 1997

Radiation Hardened Single 16/Differential 8 Channel CMOS Analog Multiplexer

Features

- Low On Resistance 400Ω Max
- Wide Analog Signal Range ±15V
- TTL/CMOS Compatible 2.4V (Logic "1")
- Access Time 1000ns Max
- 44V Maximum Power Supply
- Break-Before-Make Switching
- No Latch-up
- Gamma Dose 1 x 10⁴ RAD (Si)

Applications

- Data Acquisition Systems
- Precision Instrumentation
- Demultiplexing
- Selector Switch

Description

These radiation hardened monolithic CMOS multiplexers each include an array of sixteen analog switches, a digital decode circuit for channel selection, voltage reference for logic thresholds, and an ENABLE input for device selection when several multiplexers are present.

The Dielectric Isolation (DI) process used in fabrication of these devices eliminates the problem of latchup. Also, DI offers much lower substate leakage and parasitic capacitance than conventional junction isolated CMOS. The switching threshold for each digital input is established by an internal +5V reference, providing a guaranteed minimum 2.4V for logic "1" and maximum 0.8V for logic "0". This allows direct interface without pullup resistors to signals from most logic families: CMOS, TTL, DTL and some PMOS. For protection against transient overvoltage, the digital inputs include a series 200Ω resistor and diode clamp to each supply. The HS-0506RH is a sixteen channel single-ended multiplexer, and the HS-0507RH is an eight channel differential version. If input overvoltage protection is needed, the HS-0506RH or HS-0507RH multiplexers are recommended. For further information see Application Notes 520 and 521.

TABLE 3. ELECTRICAL PERFORMANCE CHARACTERISTICS

Device tested at +VSUPPLY = +15V, -VSUPPLY = -15V, VEN = 2.4V, Unless Otherwise Specified

PARAMETERS	SYMBOL	CONDITIONS	NOTE	TEMPERATURE	LIMITS		UNITS	
					MIN	MAX		
Capacitance: Address Input	CA	V+ = V- = 0V f = 1MHz	1	+25°C	-	12	pF	
Capacitance: Output Switch	COS	V+ = V- = 0V f = 1MHz	HS-0506RH	1	+25°C	-	90	pF
			HS-0507RH	1	+25°C	-	50	pF
Capacitance: Input Switch	CIS	V+ = V- = 0V f = 1MHz	1	+25°C	-	12	pF	
Charge Transfer Error	VCTE	VS = GND VGEN = 0V to 5V	1	+25°C	-	10	mV	
Off Isolation	VISO	VEN = 0.8V, RL = 1kΩ, CL = 15pF, VS = 7 VRMS f = 100kHz	1, 2	+25°C	-50	-	dB	

NOTES:

- The parameters listed in this table are controlled via design or process parameters and are not directly tested. These parameters are characterized upon initial design release and upon design changes which would affect these characteristics.
- Worst case isolation occurs on channel 8B due to proximity of the output pins.

	100% Data Package Generation (Note 7)

NOTES:

1. Modified SEM Inspection, not compliant to MIL-STD-883, Method 2018. This device does not meet the Class S minimum metal step coverage of 50%. The metal does meet the current density requirement of $<2 E^5 A/cm^2$. Data provided upon request.
2. Failures from subgroup 1 and deltas are used for calculating PDA. The maximum allowable PDA = 5%.
3. Radiographic (X-Ray) inspection may be performed at any point after serialization as allowed by Method 5004.
4. Alternate Group A testing may be performed as allowed by MIL-STD-883, Method 5005.
5. Group B and D inspections are optional and will not be performed unless required by the P.O. When required, the P.O. should include separate line items for Group B test, Group B samples, Group D test and Group D samples.
6. Group D Generic Data, as defined by MIL-I-38535, is optional and will not be supplied unless required by the P.O. When required, the P.O. should include a separate line item for Group D generic data. Generic data is not guaranteed to be available and is therefore not available in all cases.
7. Data Package Contents:
 - Cover Sheet (Intersil Name and/or Logo, P.O. Number, Customer Part Number, Lot Date Code, Intersil Part Number, Lot Number, Quantity).
 - Wafer Lot Acceptance Report (Method 5007). Includes reproductions of SEM photos with percent of step coverage.
 - GAMMA Radiation Report. Contains Cover page, disposition, Rad Dose, Lot Number, Test Package used, Specification Numbers, Test equipment, etc. Radiation Read and Record data on file at Intersil.
 - X-Ray report and film. Includes penetrometer measurements.
 - Screening, Electrical, and Group A attributes (Screening attributes begin after package seal).
 - Lot Serial Number Sheet (Good units serial number and lot number).
 - Variables Data (All Delta operations). Data is identified by serial number. Data header includes lot number and date of test.
 - Group B and D attributes and/or Generic data is included when required by the P.O.
 - The Certificate of Conformance is a part of the shipping invoice and is not part of the Data Book. The Certificate of Conformance is signed by an authorized Quality Representative.
