To all our customers

Regarding the change of names mentioned in the document, such as Mitsubishi Electric and Mitsubishi XX, to Renesas Technology Corp.

The semiconductor operations of Hitachi and Mitsubishi Electric were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.) Accordingly, although Mitsubishi Electric, Mitsubishi Electric Corporation, Mitsubishi Semiconductors, and other Mitsubishi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Note : Mitsubishi Electric will continue the business operations of high frequency & optical devices and power devices.

M35072-XXXFP

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DESCRIPTION

The M35072-XXXFP is a character pattern display control IC can display on the display monitor. It can display 2 pages (24 characters × 12 lines per 1 page) at the same time. It uses a silicon gate CMOS process and it housed in a 20-pin shrink SOP package .

For M35072-002FP that is a standard ROM version of M35072-XXXFP respectively, the character pattern is also mentioned.

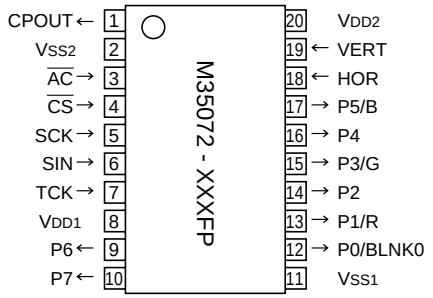
FEATURES

- Screen composition ..... 24 characters 12 lines × 2 pages
- Number of characters displayed ..... 288 (Max.) × 2 pages
- Character composition ..... 12 × 18 dot matrix
- Characters available ..... page 0 : 256 characters
  page 1 : 256 characters
- Character sizes available ..... 4 (vertical) × 2 (horizontal)
- Display locations available
  Horizontal direction ..... 2007 locations
  Vertical direction ..... 1023 locations
- Blinking ..... Character units
  Cycle : division of vertical synchronization signal into 32 or 64
  Duty : 25%, 50%, or 75%
- Data input ..... By the 16-bit serial input function
- Coloring
  Character color ..... Character unit
  Background coloring ..... Character unit
  Border (shadow) coloring ..... 8 colors (RGB output)
  Specified by register
  Raster coloring ..... 8 colors (RGB output)
  Specified by register
- Blanking
  Character size blanking
  Border size blanking
  Matrix-outline blanking
  All blanking (all raster area)
- Output ports
  4 shared output ports (toggled between RGB output)
  4 dedicated output ports
- Display RAM erase function
- Display input frequency range ..... F_{OSC} = 20MHz to 80MHz
- Horizontal synchronous input frequency
  ..... H.sync = 15 kHz to 130 kHz
- Display oscillation stop function

APPLICATION

Liquid crystal display, Plasma display

PIN CONFIGURATION (TOP VIEW)

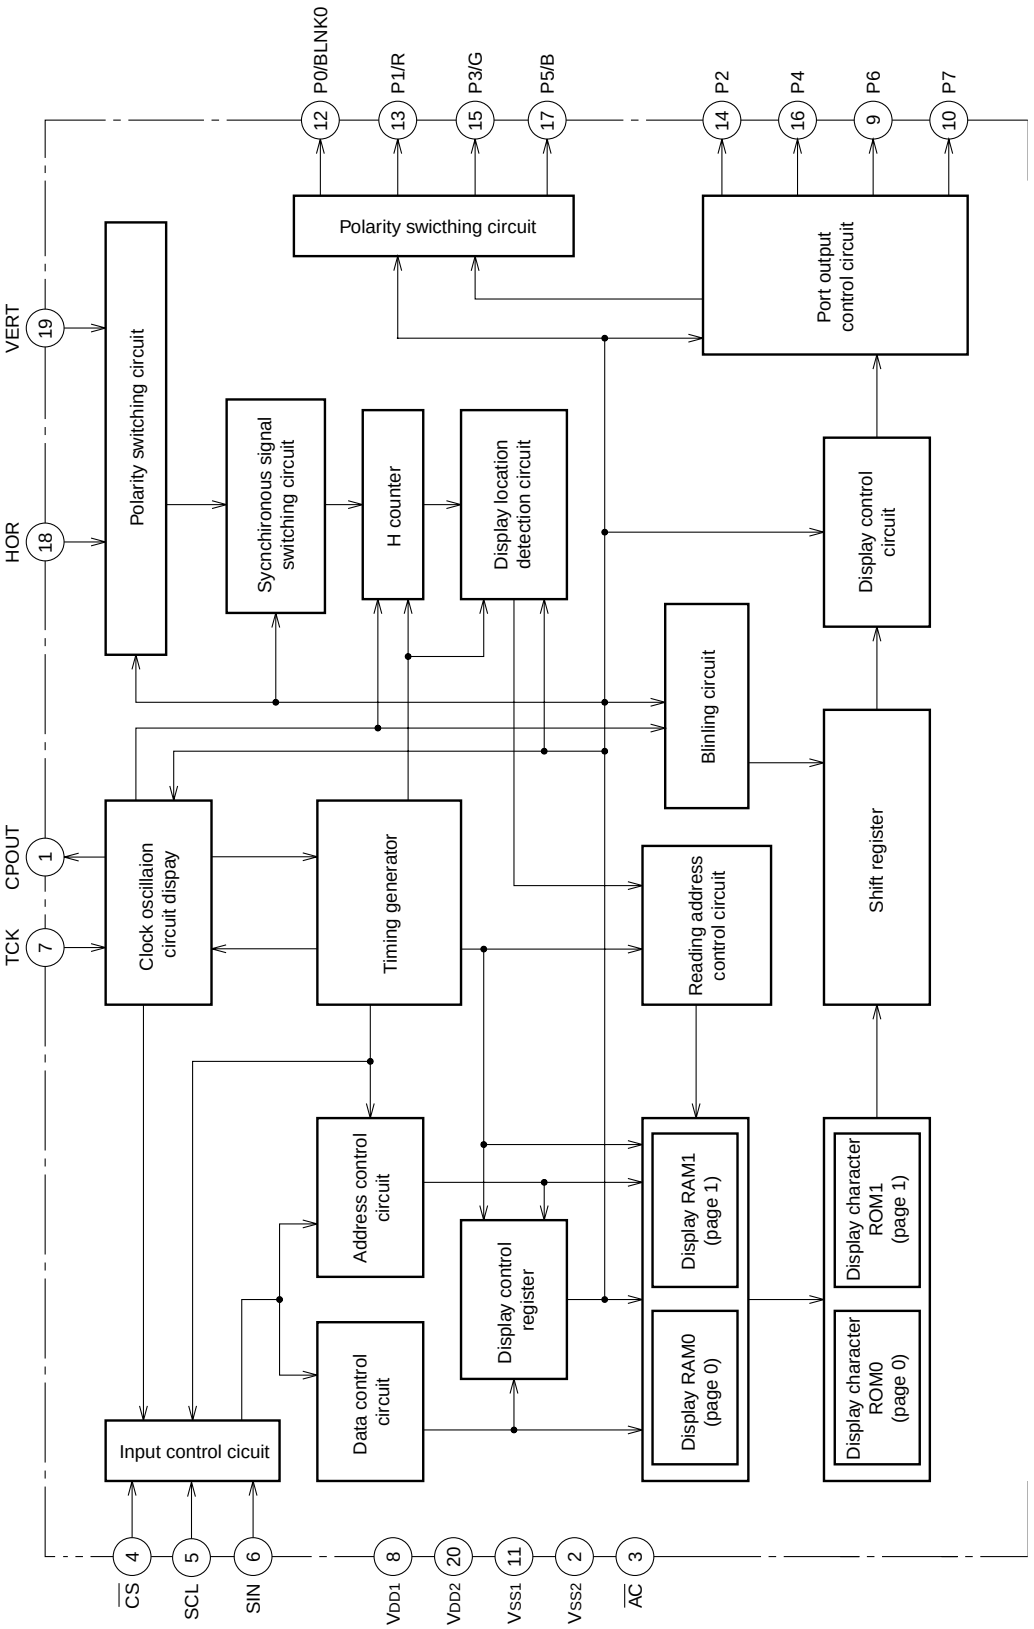


Outline 20P2Q-A

PIN DESCRIPTION

Pin Number	Symbol	Pin name	Input/ Output	Function
1	CPOUT	Filter output	Output	Filter output. Connect loop filter to this pin.
2	V_{SS2}	Earthing pin	–	Connect to GND.
3	$\overline{AC}$	Auto-clear input	Input	When “L”, this pin resets the internal IC circuit. Hysteresis input. Built-in pull-up resistor.
4	$\overline{CS}$	Chip select input	Input	This is the chip select input pin, and when serial data transmission is being carried out, it goes to “L.” Hysteresis input. Built-in pull-up resistor.
5	SCK	Serial clock input	Input	When $\overline{CS}$ pin is “L,” S_{IN} serial data is taken in when SCK rises. Hysteresis input. Built-in pull-up resistor.
6	SIN	Serial data input	Input	This is the pin for serial input of data and addresses for the display control register and the display data memory. Hysteresis input. Built-in pull-up resistor.
7	TCK	External clock	Input	This is the pin for external clock input.
8	V_{DD1}	Power pin	–	Please connect to +5V with the power pin.
9	P6	Port P6 output	Output	This is the output port.
10	P7	Port P7 output	Output	This is the output port.
11	V_{SS1}	Earthing pin	–	Please connect to GND using circuit earthing pin.
12	P0/BLNK0	Port P0 output	Output	This pin can be toggled between port pin output and BLNK0 signal output.
13	P1/R	Port P1 output	Output	This pin can be toggled between port pin output and R signal output.
14	P2	Port P2 output	Output	This is the output port.
15	P3/G	Port P3 output	Output	This pin can be toggled between port pin output and G signal output.
16	P4	Port P4 output	Output	This is the output port.
17	P5/B	Port P5 output	Output	This pin can be toggled between port pin output and B signal output.
18	HOR	Horizontal synchronous signal input	Input	This pin inputs the horizontal synchronous signal. Hysteresis input.
19	VERT	Vertical synchronous signal input	Input	This pin inputs the vertical synchronous signal. Hysteresis input.
20	V_{DD2}	Power pin	–	Please connect to +5V with the power pin.

BLOCK DIAGRAM



MEMORY CONSTITUTION

Address 000_{16} to $11F_{16}$ are assigned to the display RAM, address 120_{16} to 128_{16} are assigned to the display control registers. The internal circuit is reset and all display control registers (address 120_{16} to 128_{16}) are set to "0" when the $\overline{AC}$ pin level is "L". And then, RAM is not erased and be undefinited. This memory is consisted of 2 pages : page 0 memory and page 1 memory (their addresses are common), page controlled by DAF bit of each address when writing data. For detail, see "Data input". Memory constitution is shown in Figure 1 and 2.

Fig. 2 Memory constitution (page 1 memory)

Note: Page 0 and page 1 registers are found in their respective pages. For example, HP10 to HP0 of the page 0 memory sets the horizontal display start position of page 0, whereas HP10 to HP0 (same register name) of the page 1 memory sets the horizontal display start position of page 1. Also, registers common to both page 0 and page 1 are found only in the page 0 memory. For example, PTC0 is the control register of the P0 pin and is found only in the page 0 memory.

SCREEN CONSTITUTION

The screen lines and rows are determined from each address of the display RAM (page 0 and page 1 are common). The screen constitution is shown in Figure 3.

Row / Line	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

Notes 1. The mark ◯ around the status value means the reset status by the "L" level is input to $\overline{AC}$ pin.
2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.
3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

</table>

Notes 1. The mark ◯ around the status value means the reset status by the "L" level is input to $\overline{AC}$ pin.
2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.
3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

REGISTER SUPPLEMENTARY DESCRIPTION

(1) Setting external clock input and display frequency mode

Setting external clock input and display frequency mode (by use of EXCK0 (120_{16}), EXCK1 (123_{16}) and DIV10 to DIV0 (120_{16}), as explained here following.

(a) When (EXCK1, EXCK0) = (0, 0) .....External synchronous 1 (External clock display) … Fosc = 20 to 70 MHz
Input from the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. And input from HOR pin a constant period continuous horizontal synchronous signal.
Never stop inputting the clock while displaying.
Do not have to set a display frequency because the clock just as it is entered from outside is used as the display clock.

(b) When (EXCK1, EXCK0) = Setting disabled

(c) When (EXCK1, EXCK0) = (1, 0) ..... Setting disabled

(d) When (EXCK1, EXCK0) = (1, 1) .....External synchronous 2 (Internal oscillation clock display) … Fosc = 20 to 80 MHz
Input from the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. And input from HOR pin a constant-period continuous horizontal synchronous signal.
Never stop inputting the clock while displaying.
An internal clock which is in sync with the external input clock is used as the display clock.
Because the display frequency equals the external clock frequency, set N1 (division value) that satisfies the below expressions to DIV10 to DIV0 (address 120_{16}) for make the display frequency is equal to the external clock frequency.

N1 = external clock frequency / horizontal synchronous frequency

$$N1 = \sum_{n=0}^{10} 2^n DIV_n$$

Also, set the display frequency range. (See the next page.)

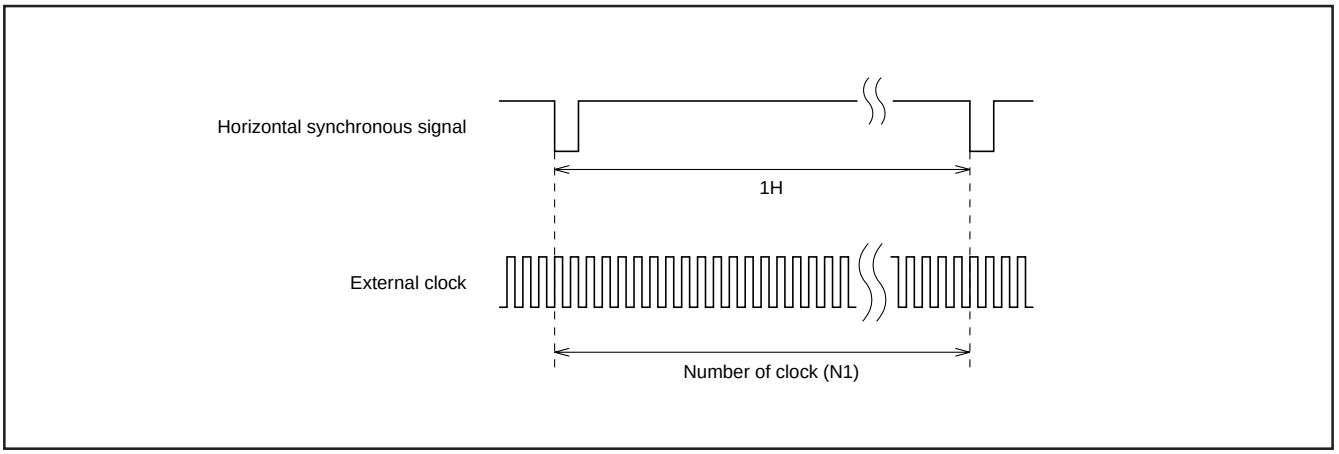

Fig. 4 Example of external clock input

(2) To set display frequency range

Whenever setting display frequency (when EXCK1 = "1", EXCK0 = "1"), always set the display frequency range in accordance with the display frequency. This range is set from DIVS0, DIVS1 (address 120_{16}), RSEL0 address 121_{16}) and RSEL1 (address 122_{16}). Frequency ranges are given here below.

RSEL1	RSEL0	DIVS1	DIVS0	Display frequency range (MHz)
1	0	0	0	67.0 to 80.0
0	1	0	0	54.0 to 67.0
1	0	0	1	47.0 to 54.0
0	0	0	0	40.0 to 47.0
1	0	1	0	34.0 to 40.0
0	0	0	1	30.0 to 34.0
0	1	1	0	26.0 to 30.0
1	0	1	1	23.0 to 26.0
0	0	1	0	20.0 to 23.0

(3) Notes on setting display frequency

To change external clock (display) frequency or horizontal synchronization frequency, always use the following procedures.

(a) Turn the display OFF. … DSPON (address 128_{16}) = "0"

(b) Set the display frequency. … Set from DIV10 to DIV0, DIVS0, DIVS1 (address 120_{16}), RSEL0 (address 121_{16}) and RSEL1 (address 122_{16}).

(c) Wait 20 ms while the horizontal synchronization signal and external clock are being input.

(d) Turn the display ON. … DSPON (address 128_{16}) = "1"

DISPLAY FORM 1

M35072-XXXFP has the following four display forms.

(1) Blanking mode

Character size

: Blanking same as the character size.

Border size

: Blanking the background as a size from character.

Matrix-outline size

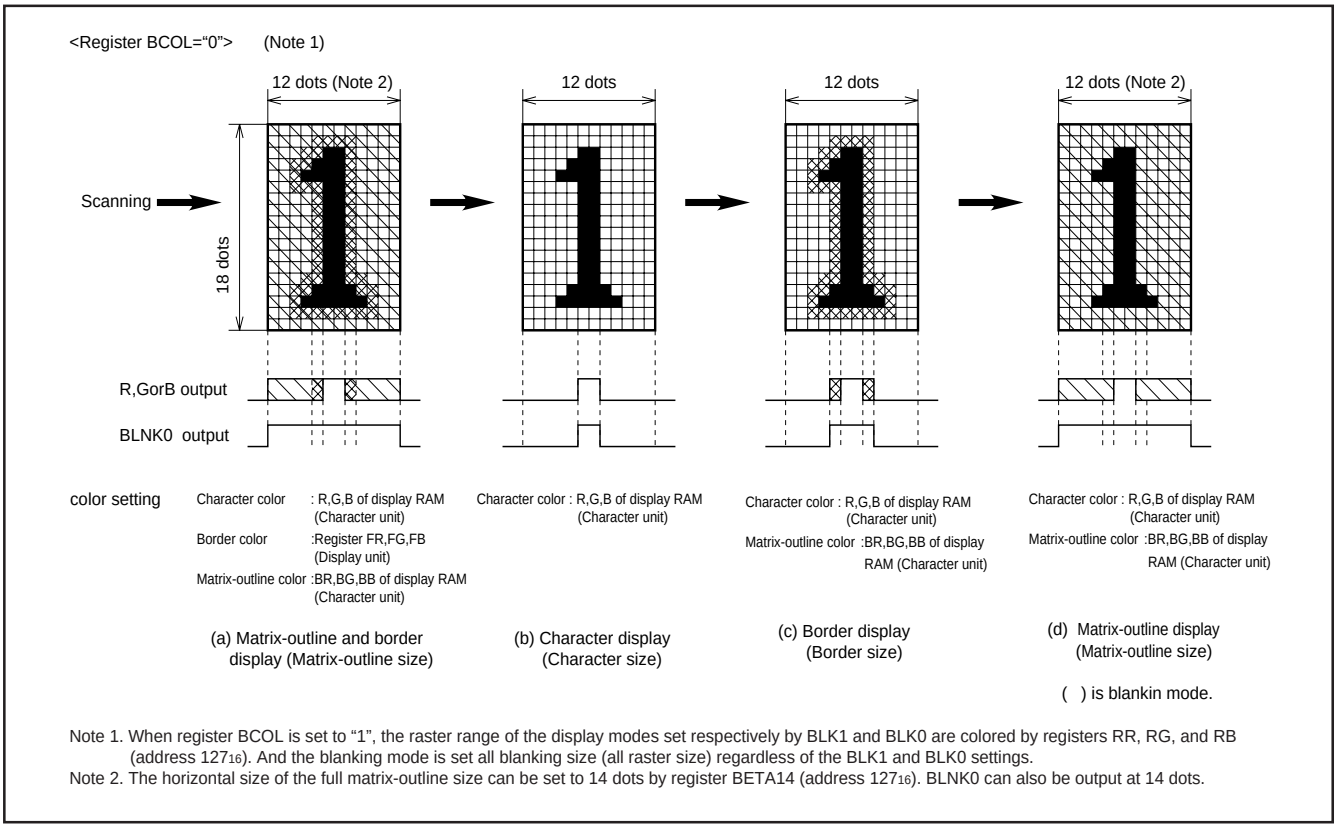
: Blanking the background 12 × 18 dot.

All blanking size

: When set register BCOL to "1", all raster area is blanking.

The display mode and blanking mode can be set line-by-line, as follows, from registers BCOL, BLK1, BLK0 (address 128_{16}), DSP0 to DSP11 (address 124_{16}).

BCOL	BLK1	BLK0	Line of DSPn = "0"		Line of DSPn = "1"	
			Display mode	Blanking mode	Display mode	Blanking mode
0	0	0	All matrix-outline border display	All matrix-outline size	All matrix-outline display	All matrix-outline size
	0	1	Character display	Character size	Border display	Border size
	1	0	Border display	Border size	All matrix-outline display	All matrix-outlinesize
	1	1	All matrix-outline display	All matrix-outline size	Character display	Character size
1	0	0	All matrix-outline border display	All blanking size	All matrix-outline display	All blanking size
	0	1	Character display		Border display	
	1	0	Border display		All matrix-outline display	
	1	1	All matrix-outline display		Character display	



Note 1. When register BCOL is set to "1", the raster range of the display modes set respectively by BLK1 and BLK0 are colored by registers RR, RG, and RB (address 127_{16}). And the blanking mode is set all blanking size (all raster size) regardless of the BLK1 and BLK0 settings.

Note 2. The horizontal size of the full matrix-outline size can be set to 14 dots by register BETA14 (address 127_{16}). BLNK0 can also be output at 14 dots.

Fig. 5 Display form

(2) Shadow display

When border display mode, if set SYAD (address 128_{16}) = “0” to “1”, it change to shadow display mode.

Border and shadow display are shown below.

Set shadow display color by BR, BG or BB of display RAM or by register FR, FG and FB (address 127_{16}).

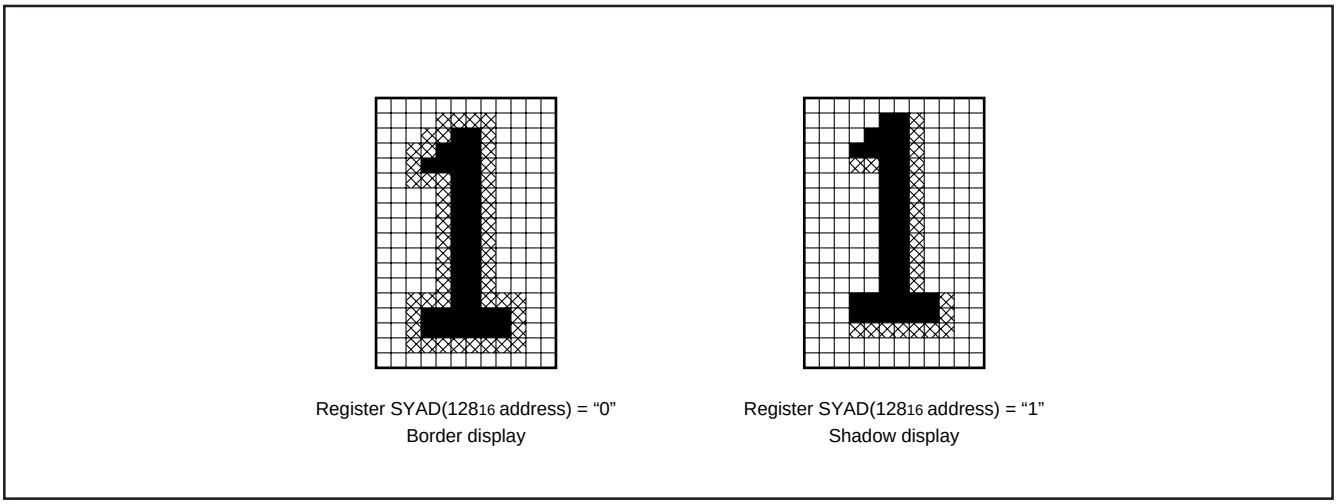


Fig. 6 Border and shadow display

DISPLAY FORM 2

This IC can display both page 0 and page 1 at the same time.

Page 0: Set the DAF bit in each addresses to "0".

Page 1: Set the DAF bit in each addresses to "1".

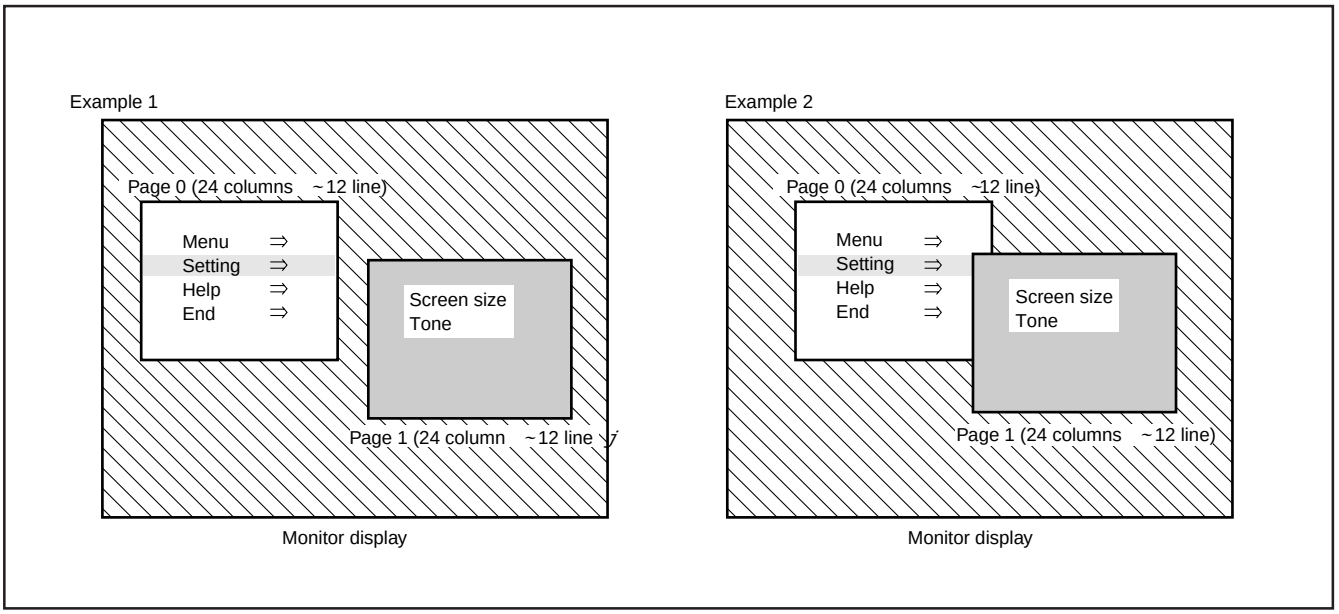

Fig. 7 Example of 2 pages display

Example 1: Display position, display size, color, etc., can be freely set for each page, and the 2 pages can be displayed on top of each other or side-by-side.

Example 2: When the display range of the 2 pages overlap on the monitor screen, they can be displayed in the 4 below ways using registers MODE0 (address 127_{16}) and MODE1 (address 128_{16}) .

MODE1	MODE0	Display mode
0	0	Standard (Page 1 priority)
0	1	AND
1	0	EXOR
1	1	OR

(1) Standard (page 1 priority) … Page 1 has priority in overlapping areas. Page 0 is not displayed in those areas.
(2) AND ..... In overlapping areas, the RGB output of the 2 pages is AND processed and output.
(3) EXOR ..... In overlapping areas, the RGB output of the 2 pages is EXOR processed and output.
(4) OR ..... In overlapping areas, the RGB output of the 2 pages is OR processed and output.

CHARACTER FONT

Images are composed on a 12 × 18 dot matrix, and characters can be linked vertically and horizontally with other characters to allow the display the continuous symbols.

Character code FF_{16} is fixed as a blank without background. Therefore, cannot register a character font in this code.

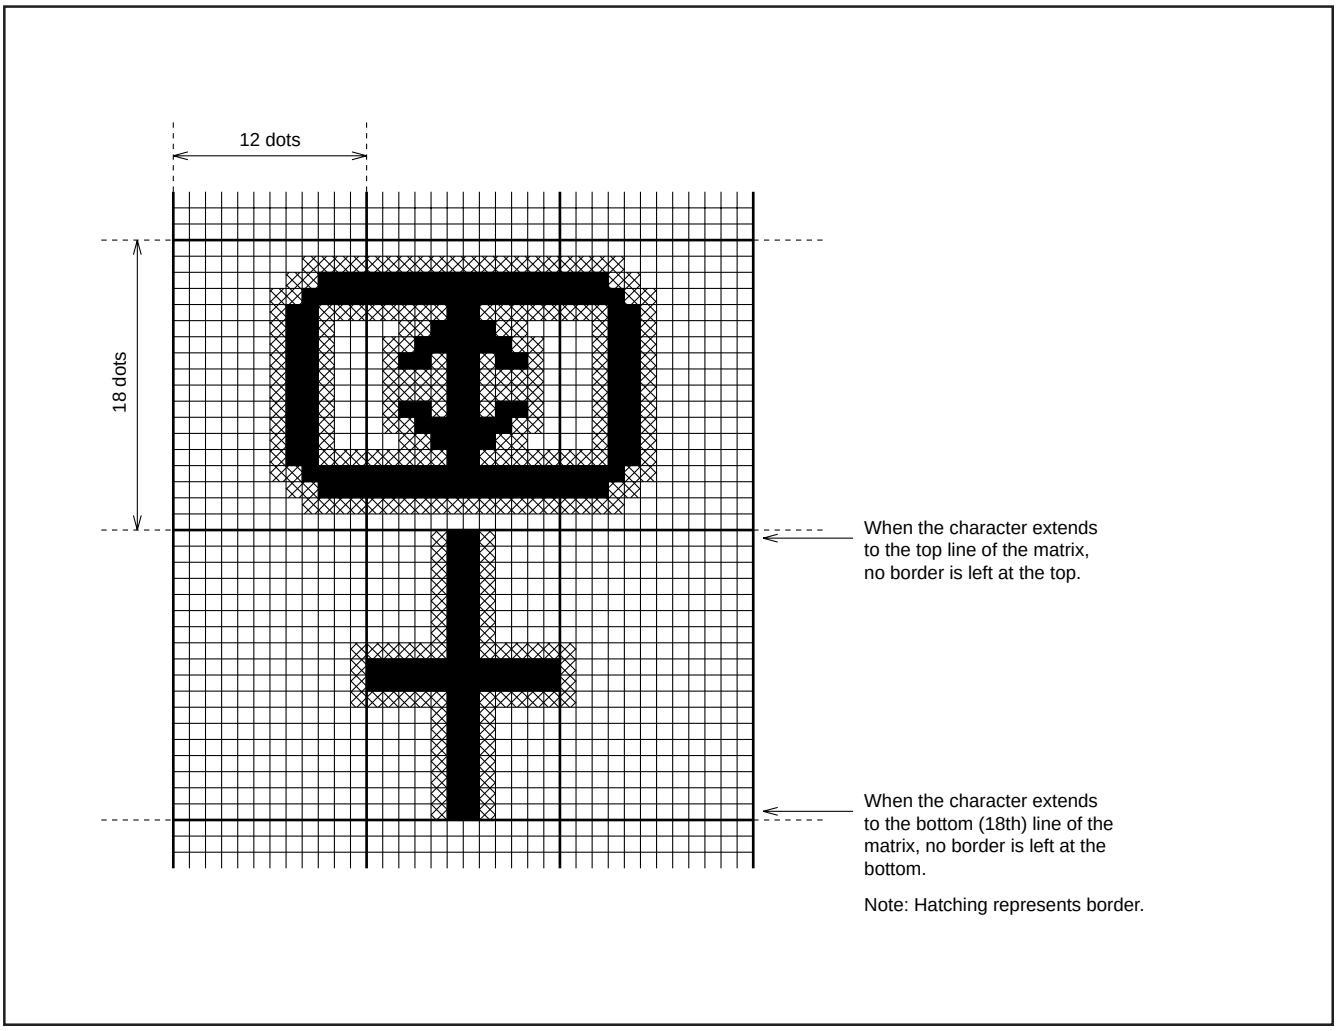

Fig. 8 Example of border display

DATA INPUT EXAMPLE

Data of display RAM and display control registers can be set by the I²C-BUS serial input function. Example of data setting is shown in Figure 9 (at EXCK0 = "1", EXCK1 = "1" setting).

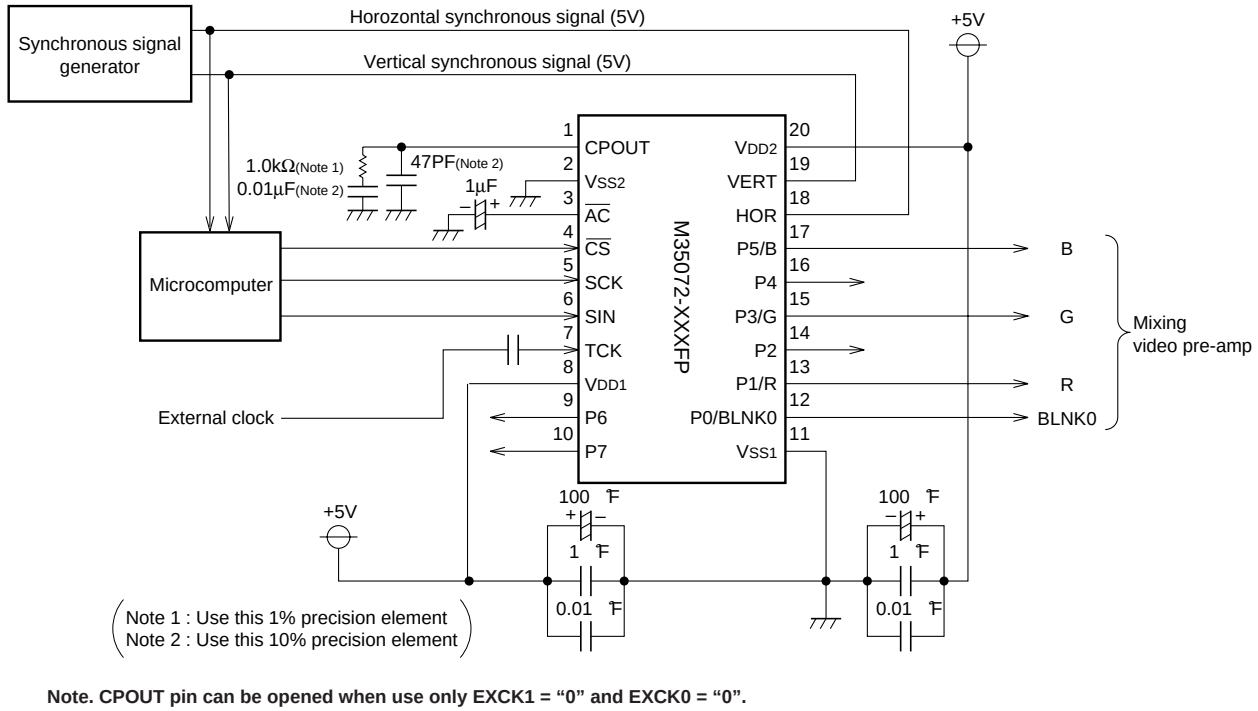
Notes 1 : The page in which data is written is controlled by the address. To write data into page 0, set "0". To write data into page 1, set "1".
2 : Input a continuous clock of constant period from the TCK pin. Also, input a horizontal synchronous signal into the HOR pin and a vertical synchronous signal into the VERT pin.
3 : Matrix-outline display in this data.

Fig. 9 Example of data setting



Note. CPOUT pin can be opened when use only EXCK1 = "0" and EXCK0 = "0".

Fig. 10 Example of the M35072-XXXFP peripheral circuit (At EXCK1 = "1", EXCK0 = "1")

SERIAL DATA INPUT TIMING

(1) Serial data should be input with the LSB first.
(2) The address consists of 16 bits.
(3) The data consists of 16 bits.
(4) The 16 bits in the SCK after the $\overline{CS}$ signal has fallen are the address, and for succeeding input data, the address is incremented every 16 bits. Therefore, it is not necessary to input the address from the second data.

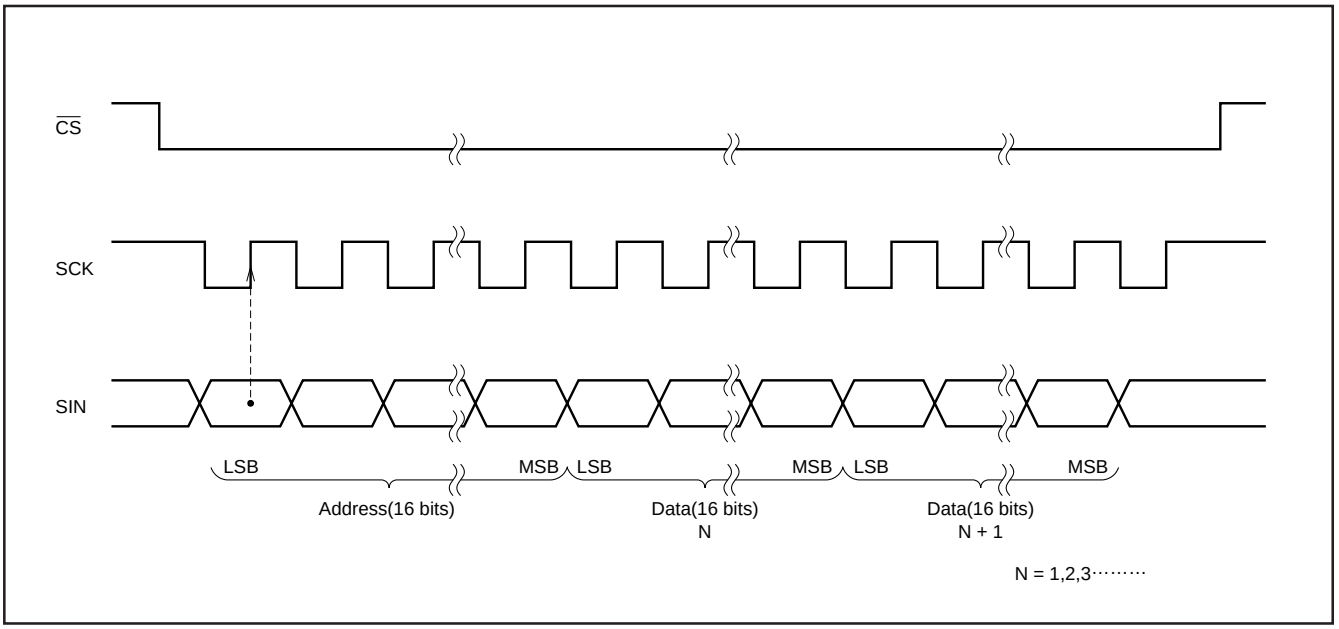


Fig. 11 Serial input timing

TIMING REQUIREMENTS (Ta = –20°C to + 85°C, V_{DD} = 5±0.25V, unless otherwise noted)

Data input

Symbol	Parameter	Limits			Unit	Remarks
		Min.	Typ.	Max.		
$t_{w(SCK)}$	SCK width	200	—	—	ns	See Figure 12
$t_{su(\overline{CS})}$	$\overline{CS}$ setup time	200	—	—	ns	
$t_{h(\overline{CS})}$	$\overline{CS}$ hold time	2	—	—	μs	
$t_{su(SIN)}$	SIN setup time	200	—	—	ns	
$t_{h(SIN)}$	SIN hold time	200	—	—	ns	
t_{word}	1 word writing time	10	—	—	μs	

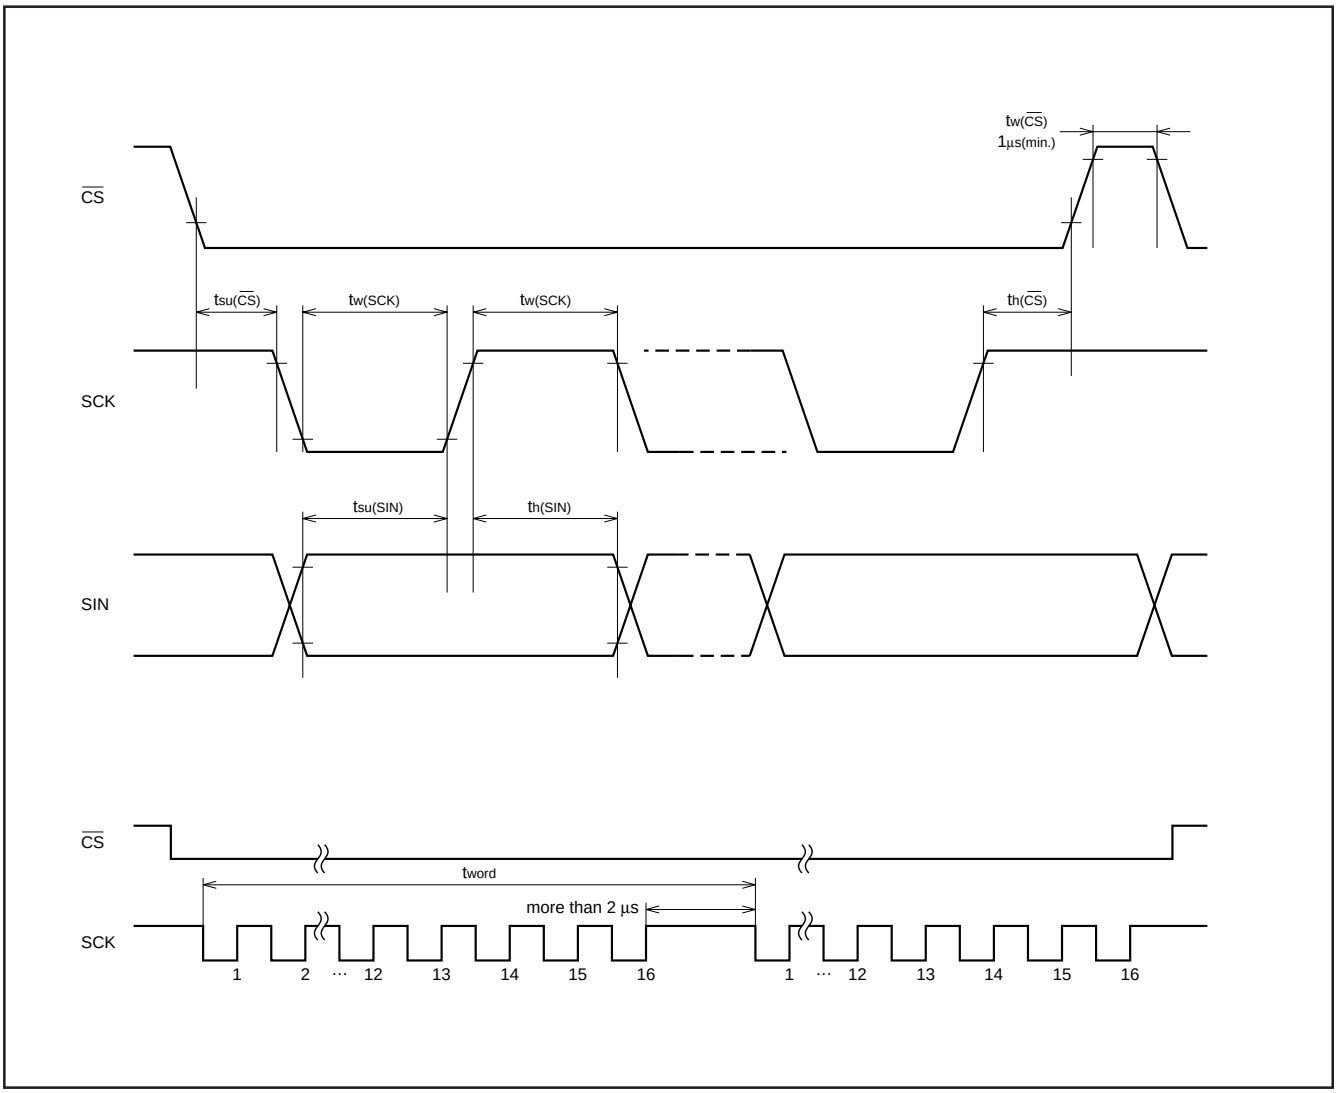

Fig. 12 Serial input timing requirements

ABSOLUTE MAXIMUM RATINGS (V_{DD} = 5.00V, Ta = –20 to +85°C, unless otherwise noted)

Symbol	Parameter	Conditions	Ratings	Unit
V_{DD}	Supply voltage	With respect to V_{SS}.	–0.3 to +6.0	V
V_I	Input voltage		V_{SS} –0.3 ≤ V_I ≤ V_{DD} +0.3	V
V_O	Output voltage		V_{SS} ≤ V_O ≤ V_{DD}	V
P_d	Power dissipation	Ta = +25°C	+300	mW
T_{opr}	Operating temperature		–20 to +85	°C
T_{stg}	Storage temperature		–40 to +125	°C

RECOMMENDED OPERATING CONDITIONS (V_{DD} = 5.00V, Ta = –20 to +85°C, unless otherwise noted)

Symbol	Parameter		Limits			Unit
			Min.	Typ.	Max.	
V_{DD}	Supply voltage		4.75	5.0	5.25	V
V_{IH}	"H" level input voltage	SIN, SCK, $\overline{CS}$, $\overline{AC}$, HOR, VERT	0.85 × V_{DD}	V_{DD}	V_{DD}	V
V_{IL}	"L" level input voltage	SIN, SCK, $\overline{CS}$, $\overline{AC}$, HOR, VERT	0	0	0.2 × V_{DD}	V
F_{OSC}	Oscillating frequency for display		20.0	–	80.0	MHz
H.sync	Horizontal synchronous signal input frequeney		15.0	–	130.0	kHz

ELECTRICAL CHARACTERISTICS (V_{DD} = 5.00V, Ta = 25°C, unless otherwise noted)

Symbol	Parameter		Test conditions	Limits			Unit
				Min.	Typ.	Max.	
V_{DD}	Supply voltage		Ta = –20 to +85°C	4.75	5.0	5.25	V
I_{DD}	Supply current		V_{DD} = 5.00V	—	40	60	mA
V_{OH}	"H" level output voltage	P0 to P7 (Note1)	V_{DD} = 4.75V, I_{OH} = -0.4mA	3.5	—	—	V
		CPOUT	V_{DD} = 4.75V, I_{OH} = -0.05mA				
V_{OL}	"L" level output voltage	P0 to P7 (Note2)	V_{DD} = 4.75V, I_{OL} = 0.4mA	—	—	0.4	V
		CPOUT	V_{DD} = 4.75V, I_{OL} = 0.05mA				
R_I	Pull-up resistance $\overline{AC}$, $\overline{CS}$, SCK, SIN		V_{DD} = 5.00V	10	30	100	kΩ
V_{TCK}	External clock input width		4.75V ≤ V_{DD} ≤ 5.25V	0.6 ~V_{DD}	—	0.9 ~V_{DD}	V

Notes 1. The current from the IC must not exceed – 0.4 mA/port at any of the port pins (P0 to P7).
2. The current flowing into the IC must not exceed 0.4 mA/port at any of port pins (P0 to P7).

NOTE FOR SUPPLYING POWER

(1)Timing of power supplying to $\overline{AC}$ pin

The internal circuit of M35072-XXXFP is reset when the level of the auto clear input pin $\overline{AC}$ is "L". This pin in hysteresis input with the pull-up resistor.

The timing about power supplying of $\overline{AC}$ pin is shown in Figure 16.

After supplying the power (V_{DD} and V_{SS}) to M35072-XXXFP and the supply voltage becomes more than $0.8 \times V_{DD}$, it needs to keep V_{IL} time; tw of the $\overline{AC}$ pin for more than 1ms.

Start inputting from microcomputer after $\overline{AC}$ pin supply voltage becomes more than $0.8 \times V_{DD}$ and keeping 200ms wait time.

(2)Timing of power supplying to V_{DD1} and V_{DD2}.

Supply power to V_{DD1} and V_{DD2} at the same time.

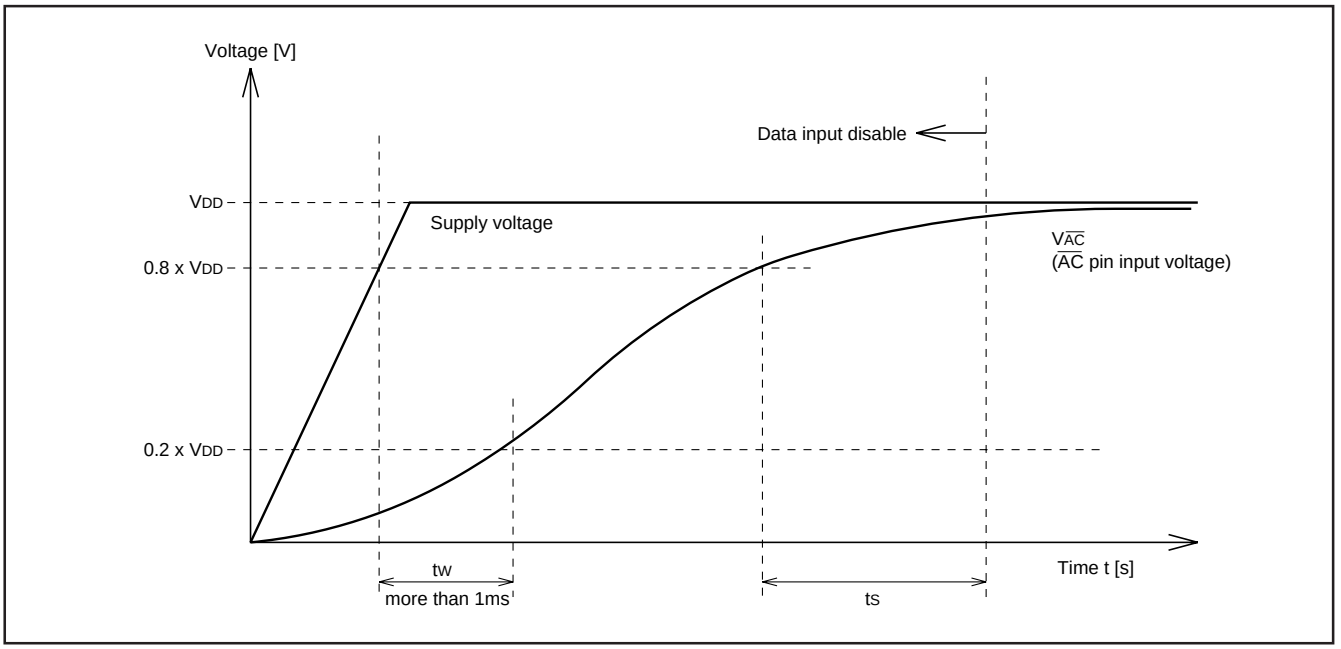

Fig. 13 Timing of power supplying to $\overline{AC}$ pin

PRECAUTION FOR USE

Notes on noise and latch-up

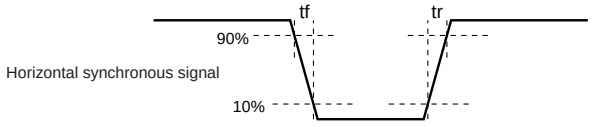
In order to avoid noise and latch-up, connect a bypass capacitor (≈0.1µF) directly between the V_{DD1} pin and V_{SS1} pin, and the V_{DD2} pin and V_{SS2} pin using a heavy wire.

Note for waveform timing of the horizontal signals to the HOR pin

Set horizontal synchronous signal edge* waveform timing to under 5ns and input to HOR pin.

Set only the side which set by B/$\overline{F}$ register waveform timing under 5ns and input to HOR pin.

*: Set front porch edge or back porch edge by B/$\overline{F}$ register.



DATA REQUIRED FOR MASK ROM ORDERING

Please send the following data for mask orders.

(1) M35072-XXXFP mask ROM order confirmation form
(2) 20P2Q-A mask specification from
(3) ROM data (EPROM 3 sets)
(4) Floppy disks containing the character font generating program + character data

STANDARD ROM TYPE : M35072-002FP

M35072-002FP is a standard ROM type of M35072-XXXFP. The character patterns for 0 page are fixed to the contents of Figure 14 to 17, the character patterns for page 1 are fixed to the contents of Figure 18 to 21.
