<sup>1)</sup> Tested with pulses  $t_p=5$  ms. **SPECIALS AVAILABLE INCLUDE:** Nominal zener voltages between the voltages shown and tighter voltage tolerances. For detailed information on price, availability, and delivery, contact your nearest Motorola representative; **ZENER VOLTAGE (VZ) MEASUREMENT:** VZ is measured after the test current has been applied to  $40 \pm 10$  msec., while maintaining the lead temperature (TL) at  $30^\circ\text{C} \pm 1^\circ\text{C}$ , 3/8, from the diode body.

<sup>2)</sup> Valid provided that leads are kept at ambient temperature at a distance of 10 mm from case.

<sup>3)</sup> The zener impedance is derived from the 1 kHz cycle ac voltage, which results when an ac current having an rms value equal to 10% of the dc zener current (IZT) or (IZK) is superimposed on IZT or IZK.
