### ■ DESCRIPTION

The MB90360E-series, loaded 1 channel FULL-CAN\* interface and Flash ROM, is general-purpose FUJITSU 16-bit microcontroller designing for automotive and industrial applications. Its main feature is the on-board CAN Interfaces, which conform to Ver 2.0 Part A and Part B, while supporting a very flexible message buffer scheme and so offering more functions than a normal FULL-CAN approach. With the new 0.35 μm CMOS technology, Fujitsu now offers on-chip Flash ROM program memory up to 64 Kbytes.

The power supply (3 V) is supplied to the MCU core from an internal regulator circuit. This creates a major advantage in terms of EMI and power consumption.

The internal PLL clock frequency multiplier provides an internal 42 ns instruction execution time from an external 4 MHz clock. Also, main and sub clock can be monitored independently using the clock supervisor function.

The unit features a 4-channel input capture unit 1 channel 16-bit free running timer, 2-channel UART, and 16-channel 8/10-bit A/D converter as the peripheral resource.

\* : Controller Area Network (CAN) - License of Robert Bosch GmbH

Note : F<sup>2</sup>MC is the abbreviation of FUJITSU Flexible Microcontroller.

Be sure to refer to the "Check Sheet" for the latest cautions on development.

"Check Sheet" is seen at the following support page

URL : <http://www.fujitsu.com/global/services/microelectronics/product/micom/support/index.html>

"Check Sheet" lists the minimal requirement items to be checked to prevent problems beforehand in system development.

# MB90360E Series

## ■ FEATURES

### • Clock

- Built-in PLL clock frequency multiplication circuit
- Selection of machine clocks (PLL clocks) is allowed among frequency division by 2 on oscillation clock and multiplication of 1 to 6 times of oscillation clock (for 4 MHz oscillation clock, 4 MHz to 24 MHz)
- Operation by sub clock : internal operating clock frequency: up to 50 kHz (for operating with 100 kHz oscillation clock divided two and devices without S-suffix only) is available
- Minimum execution time of instruction : 42 ns (when operating with 4-MHz oscillation clock and 6-time multiplied PLL clock)

### • Clock supervisor (MB90x367x only)

- Main clock or sub clock is monitored independently
- Internal CR oscillation clock (100 kHz typical) can be used as sub clock

### • Instruction system best suited to controller

- 16 Mbytes CPU memory space
- 24-bit internal addressing
- Wide choice of data types (bit, byte, word, and long word)
- Wide choice of addressing modes (23 types)
- Enhanced multiply-divide instructions with sign and RETI instructions
- Enhanced high-precision computing with 32-bit accumulator

### • Instruction system compatible with high-level language (C language) and multitask

- Employing system stack pointer
- Enhanced various pointer indirect instructions
- Barrel shift instructions

### • Increased processing speed

4-byte instruction queue

### • Powerful interrupt function

- Powerful 8-level, 34-condition interrupt feature
- Up to 8 channels external interrupts are supported

### • Automatic data transfer function independent of CPU

Expanded intelligent I/O service function (EI<sup>2</sup>OS) : up to 16 channels

### • Low power consumption (standby) mode

- Sleep mode (a mode that halts CPU operating clock)
- Main timer mode (timebase timer mode that is transferred from main clock mode)
- PLL timer mode (timebase timer mode that is transferred from PLL clock mode)
- Watch mode (a mode that operates sub clock and watch timer only, devices without S-suffix)
- Stop mode (a mode that stops oscillation clock and sub clock)
- CPU blocking operation mode

### • Process

CMOS technology

### • I/O port

General purpose input/output port (CMOS output) :

- 34 ports (devices without S-suffix)
- 36 ports (devices with S-suffix)

### • Sub clock pin (X0A and X1A)

- Provided (used for external oscillation), devices without S-suffix
- Not provided (used with internal CR oscillation in sub clock mode) , devices with S-suffix

(Continued)

(Continued)

- **Timer**

- Timebase timer, watch timer (device without S-suffix) , watchdog timer : 1 channel
- 8/16-bit PPG timer : 8-bit × 2 channels or 16-bit × 1 channel
- 16-bit reload timer : 2 channels
- 16-bit input/output timer
  - 16-bit free-run timer : 1 channel (FRT0 : ICU 0/1/2/3)
  - 16-bit input capture : (ICU) : 4 channels

- **FULL-CAN interface : up to 1 channel**

- Compliant with CAN specifications Version 2.0 Part A and B
- 16 message buffers are built in
- CAN wake-up function

- **UART (LIN/SCI) : up to 2 channels**

- Equipped with full-duplex double buffer
- Clock-asynchronous or clock-synchronous serial transmission is available

- **DTP/External interrupt : up to 8 channels, CAN wakeup : up to 1 channel**

Module for activation of expanded intelligent I/O service (EI<sup>2</sup>OS) and generation of external interrupt by external input

- **Delay interrupt generator module**

Generates interrupt request for task switching

- **8/10-bit A/D converter : 16 channels**

- Resolution is selectable between 8-bit and 10-bit
- Activation by external trigger input is allowed
- Conversion time : 3 μs (at 24-MHz machine clock, including sampling time)

- **Program patch function**

Address matching detection for 6 address pointers

- **Low voltage/CPU operation detection reset (devices with T-suffix)**

- Detects low voltage (4.0 V ± 0.3 V) and resets automatically
- Resets automatically when program is runaway and counter is not cleared within interval time (approx. 262 ms : external 4 MHz)

- **Capable of changing input voltage for port**

Automotive/CMOS-Schmitt input level (initial level is Automotive in single-chip mode)

- **Flash memory security function**

Protects the content of Flash memory (MB90F362x, MB90F367x only)

## ■ HANDLING DEVICES

### 1. Preventing latch-up

CMOS IC chips may suffer latch-up under the following conditions :

- A voltage higher than  $V_{CC}$  pin or lower than  $V_{SS}$  pin is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between  $V_{CC}$  pin and  $V_{SS}$  pin.
- The  $AV_{CC}$  power supply is applied before the  $V_{CC}$  voltage.

Latch-up may increase the power supply current drastically, causing thermal damage to the device.

Use meticulous care not to exceed the rating.

For the same reason, also be careful not to let the analog power-supply voltage ( $AV_{CC}$ ,  $AVR$ ) exceed the digital power-supply voltage.

### 2. Treatment of unused pins

Leaving unused input pins open may result in permanent damage of the device due to misbehavior or latch-up. Therefore, they must be pulled up or pulled down through resistors. In this case, those resistors should be more than 2 k $\Omega$  .

Unused bidirectional pins should be set to the output state and can be left open, or the input state with the above described connection.

### 3. Using external clock

To use external clock, drive the X0 pin and leave X1 pin open.

### 4. Precautions for when not using a sub clock signal

If you do not connect pins X0A and X1A to an oscillator, use pull-down handling on the X0A pin and leave the X1A pin open.

### 5. Notes on during operation of PLL clock mode

On this microcontroller, if in case the crystal oscillator breaks off or an external reference clock input stops while the PLL clock mode is selected, a self-oscillator circuit contained in the PLL may continue its operation at its self-running frequency. However, Fujitsu will not guarantee results of operations if such failure occurs.

### 6. Power supply pins ( $V_{CC}/V_{SS}$ )

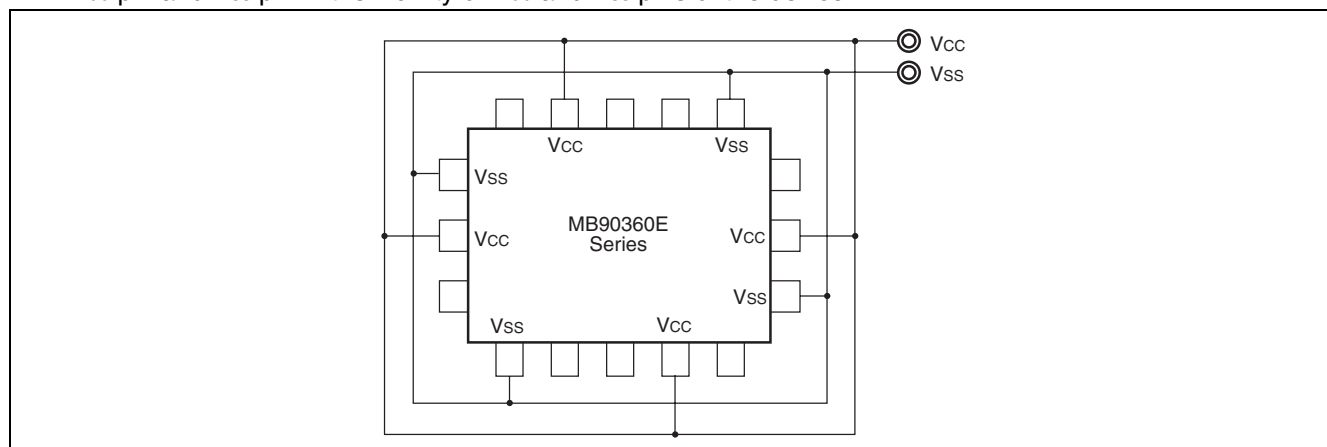

- If there are multiple  $V_{CC}$  and  $V_{SS}$  pins, from the point of view of device design, pins to be of the same potential are connected the inside of the device to prevent malfunction such as latch-up.

To reduce unnecessary radiation, prevent malfunctioning of the strobe signal due to the rise of ground level, and observe the standard for total output current, be sure to connect the  $V_{CC}$  and  $V_{SS}$  pins to the power supply and ground externally.

- Connect  $V_{CC}$  and  $V_{SS}$  pins to the device from the current supply source at a low impedance.

# MB90360E Series

- As a measure against power supply noise, connect a capacitor of about 0.1  $\mu$ F as a bypass capacitor between  $V_{CC}$  pin and  $V_{SS}$  pin in the vicinity of  $V_{CC}$  and  $V_{SS}$  pins of the device.

## 7. Pull-up/down resistors

The MB90360E Series does not support internal pull-up/down resistors (Port 2 : built-in pull-up resistors) . Use external components where needed.

## 8. Crystal oscillator circuit

Noises around X0 or X1 pin may be possible causes of abnormal operations. Make sure to provide bypass capacitors via shortest distance from X0, X1 pins, crystal oscillator (or ceramic resonator) and ground lines, and make sure, to the utmost effort, that lines of oscillation circuit do not cross the lines of other circuits.

It is highly recommended to provide a printed circuit board artwork surrounding X0 and X1 pins with a ground area for stabilizing the operation. Please ask the crystal maker to evaluate the oscillational characteristics of the crystal and this device.

## 9. Turning-on sequence of power supply to A/D converter and analog inputs

Make sure to turn on the A/D converter power supply ( $AV_{CC}$  and  $AVR$ ) and analog inputs ( $AN0$  to  $AN15$ ) after turning-on the digital power supply ( $V_{CC}$ ) .

Turn-off the digital power after turning off the A/D converter power supply and analog inputs. In this case, make sure that the voltage does not exceed  $AVRH$  or  $AV_{CC}$ .

## 10. Connection of unused pins of A/D converter if A/D converter is not used

Connect unused pins of A/D converter to  $AV_{CC} = V_{CC}$ ,  $AV_{SS} = AVR = V_{SS}$ .

## 11. Notes on energization

To prevent the internal regulator circuit from malfunctioning, set the voltage rise time during energization at 50  $\mu$ s or more (0.2 V to 2.7 V).

## 12. Stabilization of power supply voltage

A sudden change in the power supply voltage may cause the device to malfunction even within the specified  $V_{CC}$  power supply voltage operating guarantee range. Therefore, the  $V_{CC}$  power supply voltage should be stabilized.

For reference, the power supply voltage should be controlled so that  $V_{CC}$  ripple variations (peak-to-peak value) at commercial frequencies (50 Hz/60 Hz) fall below 10% of the standard  $V_{CC}$  power supply voltage and the coefficient of transient fluctuation does not exceed 0.1 V/ms at instantaneous power switching.

## 13. Initialization

In the device, there are internal registers which are initialized only by a power-on reset. To initialize these registers, turn on the power again.

## 14. Notes on using CAN function

To use CAN function, please set '1' to DIRECT bit of CAN direct mode register (CDMR).

If DIRECT bit is set to '0' (initial value), wait states will be performed when accessing CAN registers.

Note : Please refer to Hardware Manual of "MB90360E series for detail of CAN Direct Mode Register".

## 15. Flash security function

The security bit is located in the area of the Flash memory.

If protection code 01<sub>H</sub> is written in the security bit, the Flash memory is in the protected state by security.

Therefore, please do not write 01<sub>H</sub> in this address if you do not use the security function.

Please refer to following table for the address of the security bit.

|                                                                                                              | Flash memory size               | Address for security bit |
|--------------------------------------------------------------------------------------------------------------|---------------------------------|--------------------------|
| MB90F362E<br>MB90F362ES<br>MB90F362TE<br>MB90F362TES<br>MB90F367E<br>MB90F367ES<br>MB90F367TE<br>MB90F367TES | Embedded 512 Kbits Flash Memory | FF0001 <sub>H</sub>      |

## 16. Correspondence with $T_A = +105\text{ }^\circ\text{C}$ or more

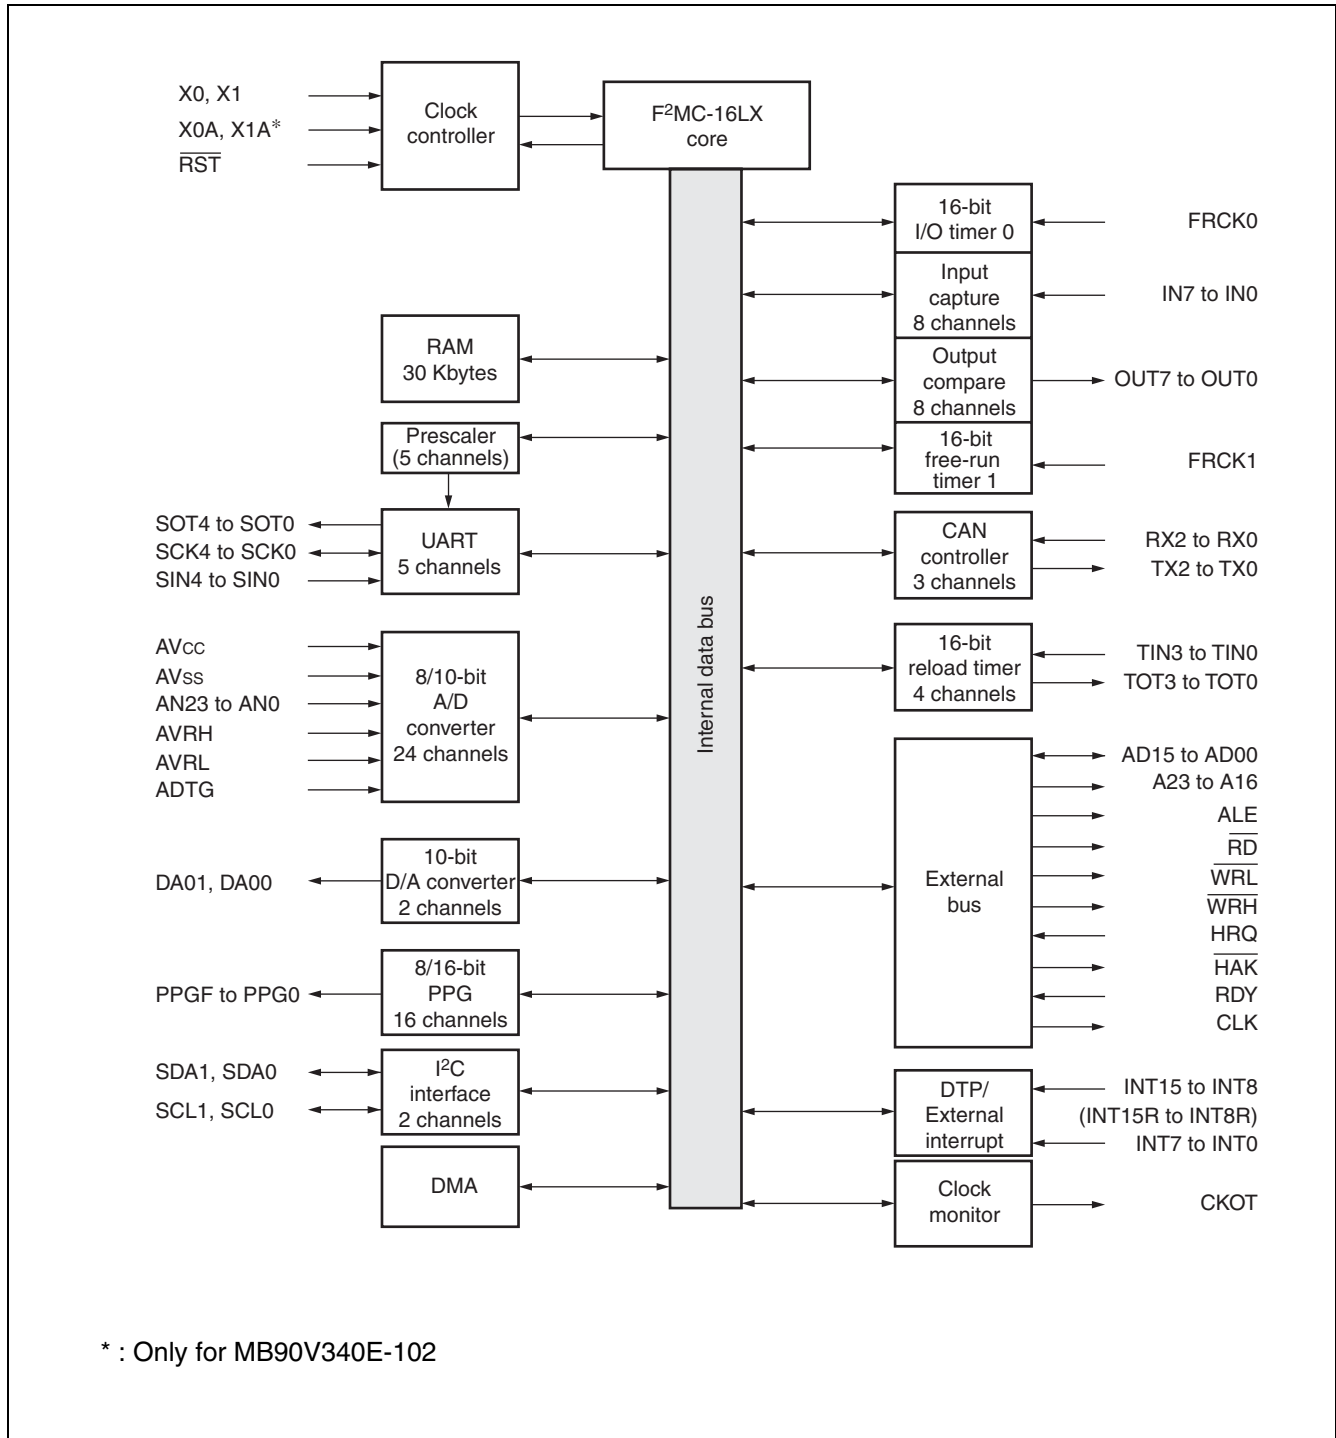

If used exceeding  $T_A = +105\text{ }^\circ\text{C}$ , please consult with us due to the restricted reliability.

It is ensured to write/erase data to the Flash memory between  $T_A = -40\text{ }^\circ\text{C}$  and  $+105\text{ }^\circ\text{C}$ .

## MEMORY MAP

Note : The high-order portion of bank 00 gives the image of the FF bank ROM to make the small model of the C compiler effective. Since the low-order 16 bits are the same, the table in ROM can be referred without using the far specification in the pointer declaration.

For example, an attempt to access 00C000H practically accesses the value at FFC000H in ROM.

The ROM area in bank FF exceeds 32 Kbytes, and its entire image cannot be shown in bank 00.

The image between FF8000H and FFFFFFFH is visible in bank 00, while the image between FF0000H and FF7FFFH is visible only in bank FF.

- Notes :
- Initial value of "X" represents unknown value.
  - Any write access to reserved addresses in I/O map should not be performed. A read access to reserved addresses results in reading "X".

# MB90360E Series

## ■ CAN CONTROLLERS

- Conforms to CAN Specification Ver 2.0 Part A and Part B
  - Supports transmission/reception in standard frame and extended frame formats
- Supports transmitting of data frames by receiving remote frames
- 16 transmitting/receiving message buffers
  - 29-bit ID and 8-byte data
  - Multi-level message buffer configuration
- Provides full-bit comparison, full-bit mask, acceptance register 0/acceptance register 1 for each message buffer as ID acceptance mask
  - 2 acceptance mask registers in either standard frame format or extended frame formats
- Bit rate programmable from 10 kbps/s to 2 Mbps/s (when input clock is at 16 MHz)

Y1 : Usable

Y2 : Usable, with EI<sup>2</sup>OS stop function

N : Unusable

- Notes :
- The peripheral resources sharing the ICR register have the same interrupt level.
  - When the peripheral resources sharing the ICR register use extended intelligent I/O service, only one can use extended intelligent I/O service at a time.
  - When either of the 2 peripheral resources sharing the ICR register specifies extended intelligent I/O service, the other one cannot use interrupts.

(Continued)

# MB90360E Series

(Continued)

- \*1 : This parameter is based on  $V_{SS} = AV_{SS} = 0$  V.
- \*2 : Set  $AV_{CC}$  and  $V_{CC}$  to the same voltage. Make sure that  $AV_{CC}$  does not exceed  $V_{CC}$  and that the voltage at the analog inputs does not exceed  $AV_{CC}$  when the power is switched on.
- \*3 :  $V_I$  and  $V_O$  should not exceed  $V_{CC} + 0.3$  V.  $V_I$  should not exceed the specified ratings. However, if the maximum current to/from an input is limited by some means with external components, the  $I_{CLAMP}$  rating supersedes the  $V_I$  rating.
- \*4 : Applicable to pins : P24 to P27, P40 to P44, P50 to P57, P60 to P67, P80, P82 to P87
- \*5 : Applicable to pins : P20 to P23
- \*6 : Applicable to pins : P20 to P27, P40 to P44, P50 to P57, P60 to P67, P80, P82 to P87
  - Use within recommended operating conditions.
  - Use at DC voltage (current) .
  - The +B signal should always be applied a connecting limit resistance between the +B signal and the microcontroller.
  - The value of the limiting resistance should be set so that when the +B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
  - Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the  $V_{CC}$  pin, and this may affect other devices.
  - Note that if a +B signal is inputted when the microcontroller power supply is off (not fixed at 0 V) , the power supply is provided from the pins, so that incomplete operation may result.
  - Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting power supply voltage may not be sufficient to operate the power-on reset.
  - Care must be taken not to leave the +B input pin open.
  - Recommended circuit sample :

- \*7 : If used exceeding  $T_A = +105$  °C, please consult with us due to the restricted reliability.  
It is ensured to write/erase data to the Flash memory between  $T_A = -40$  °C and  $+105$  °C.

**WARNING:** Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

## 2. Recommended Conditions

( $V_{SS} = AV_{SS} = 0\text{ V}$ )

**WARNING:** The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

## (2) Reset Standby Input

( $T_A = -40\text{ }^\circ\text{C}$  to  $+125\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

| Parameter        | Symbol     | Pin              | Value                                                  |     | Unit          | Remarks                |                                                              |
|------------------|------------|------------------|--------------------------------------------------------|-----|---------------|------------------------|--------------------------------------------------------------|
|                  |            |                  | Min                                                    | Max |               |                        |                                                              |
| Reset input time | $t_{RSTL}$ | $\overline{RST}$ | 500                                                    | —   | ns            | Under normal operation |                                                              |
|                  |            |                  | Oscillation time of oscillator*<br>+ 100 $\mu\text{s}$ |     | —             | ns                     | In stop mode, sub clock mode, sub sleep mode, and watch mode |
|                  |            |                  | 100                                                    | —   | $\mu\text{s}$ | In timebase timer mode |                                                              |

\* : Oscillation time of oscillator is the time that the amplitude reaches 90%. In the crystal oscillator, the oscillation time is between several ms and tens of ms. In ceramic oscillators, the oscillation time is between hundreds of  $\mu\text{s}$  and several ms. With an external clock, the oscillation time is 0 ms.

### • Under normal operation :

### • In stop mode, sub clock mode, sub sleep mode, and watch mode :

### (3) Power-on Reset

( $T_A = -40\text{ }^\circ\text{C}$  to  $+125\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

| Parameter          | Symbol    | Pin      | Condition | Value |     | Unit | Remarks                     |
|--------------------|-----------|----------|-----------|-------|-----|------|-----------------------------|
|                    |           |          |           | Min   | Max |      |                             |
| Power on rise time | $t_R$     | $V_{CC}$ | —         | 0.05  | 30  | ms   |                             |
| Power off time     | $t_{OFF}$ | $V_{CC}$ | —         | 1     | —   | ms   | Due to repetitive operation |

Note : If you change the power supply voltage too rapidly, a power-on reset may occur. We recommend that you start up smoothly by restraining voltages when changing the power supply voltage during operation, as shown in the figure below. Perform while not using the PLL clock. However, if voltage drops are within 1 V/s, you can operate while using the PLL clock.

\* : If A/D converter is not operating, a current when CPU is stopped is applicable ( $V_{CC} = AV_{CC} = AV_R = 5.0\text{ V}$ ) .

# MB90360E Series

- **About the external impedance of analog input and its sampling time**

A/D converter with sample and hold circuit. If the external impedance is too high to keep sufficient sampling time, the analog voltage changed to the internal sample and hold capacitor is insufficient, adversely affecting A/D conversion precision. Therefore, to satisfy the A/D conversion precision standard, consider the relationship between the external impedance and minimum sampling time and either adjust the resistor value and operating frequency or decrease the external impedance so that the sampling time is longer than the minimum value. And, if the sampling time cannot be sufficient, connect a capacitor of about 0.1  $\mu\text{F}$  to the analog input pin.

- **Analog input equivalent circuit model**

| $4.0 \text{ V} \leq AV_{CC} < 4.5 \text{ V}$    | 8.2 k $\Omega$ (Max) | 14.4 pF (Max) |

Note : The values are reference values.

- The relationship between external impedance and minimum sampling time

- At  $4.5\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$

(External impedance = 0 kΩ to 100 kΩ)

(External impedance = 0 kΩ to 20 kΩ)

- At  $4.0\text{ V} \leq AV_{CC} < 4.5\text{ V}$

(External impedance = 0 kΩ to 100 kΩ)

(External impedance = 0 kΩ to 20 kΩ)

- About errors

As  $|AVR - AV_{SS}|$  becomes smaller, values of relative errors grow larger.

# MB90360E Series

## 6. Definition of A/D Converter Terms

- Resolution : Analog variation that is recognized by an A/D converter.
- Non linearity error : Deviation between a line across zero-transition line (“00 0000 0000<sub>B</sub>” ← → “00 0000 0001<sub>B</sub>”) and full-scale transition line (“11 1111 1110<sub>B</sub>” ← → “11 1111 1111<sub>B</sub>”) and actual conversion characteristics.
- Differential linearity error : Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.
- Total error : Difference between an actual value and an theoretical value. A total error includes zero transition error, full-scale transition error, and linear error.

$$\text{Total error of digital output "N"} = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$1 \text{ LSB (Ideal value)} = \frac{AVR - AV_{SS}}{1024} \text{ [V]}$$

N : A/D converter digital output value

$V_{OT}$  (Ideal value) =  $AV_{SS} + 0.5 \text{ LSB}$  [V]

$V_{FST}$  (Ideal value) =  $AVR - 1.5 \text{ LSB}$  [V]

$V_{NT}$  : A voltage at which digital output transits from (N - 1) to N.

(Continued)

(Continued)

$$\text{Non linearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + V_{OT}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$\text{Differential linearity error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1 \text{ LSB [LSB]}$$

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ [V]}$$

N : A/D converter digital output value

V<sub>OT</sub> : Voltage at which digital output transits from “000<sub>H</sub>” to “001<sub>H</sub>.”

V<sub>FST</sub> : Voltage at which digital output transits from “3FE<sub>H</sub>” to “3FF<sub>H</sub>.”

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
