Analog 5-wire PET-On-Glass Touch Screen Specification

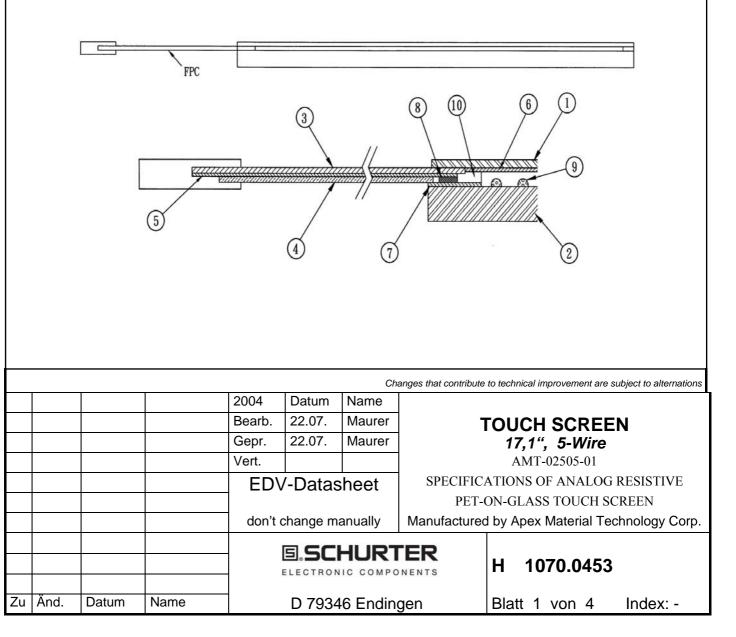

Ho

1. Mechanical Dimensions and Construction

- 1.1 General: Analog Resistive touch screen is laminated by ITO PET to ITO glass.
- 1.2 Construction :

Item	Description	Material	Remarks
	ITO PET	0.188mm ITO PET Film	Antiglare coating
1	(Top layer)		Surface hardness: 3H
			Resistance: $300 \sim 600 \Omega/\Box$
	ITO Patterned Glass (Bottom	2,85mm ITO Glass	Resistance: $300 \sim 600 \Omega/\Box$
2	layer)		
3	Tail Base	Kapton	Separated Tail
4	Tail cover lay	Kapton	
5	Connector	AMP Compatible	Pitch:2.54mm
6	Top layer circuit	Silver ink	
7	Bottom layer circuit	Silver ink	
8	Layer to layer contacted	Silver ink	
9	Dot spacer	UV Cure ink	
10	Isolation Layer	Isolation Adhesive	

Touch screen side view:

RoHS

1.3 Input Method and Activation Force

Input Method	Average Activation Force				
16mm dia. Silicon "finger"	Less than 1.00 N				

5.5V or less

20~300Ω

< 15 ms

20mA (maximum)

 $> 10M\Omega$ at 25VDC

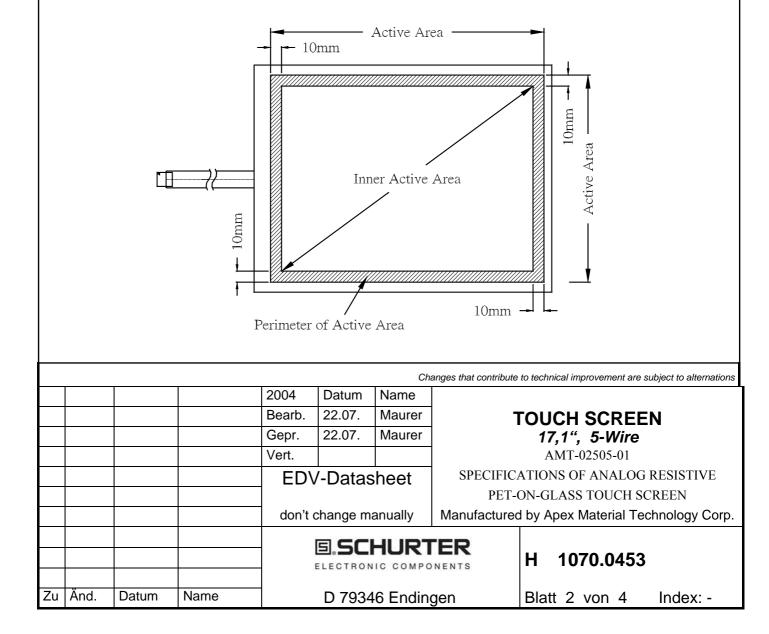

2. Typical Optical Characteristics

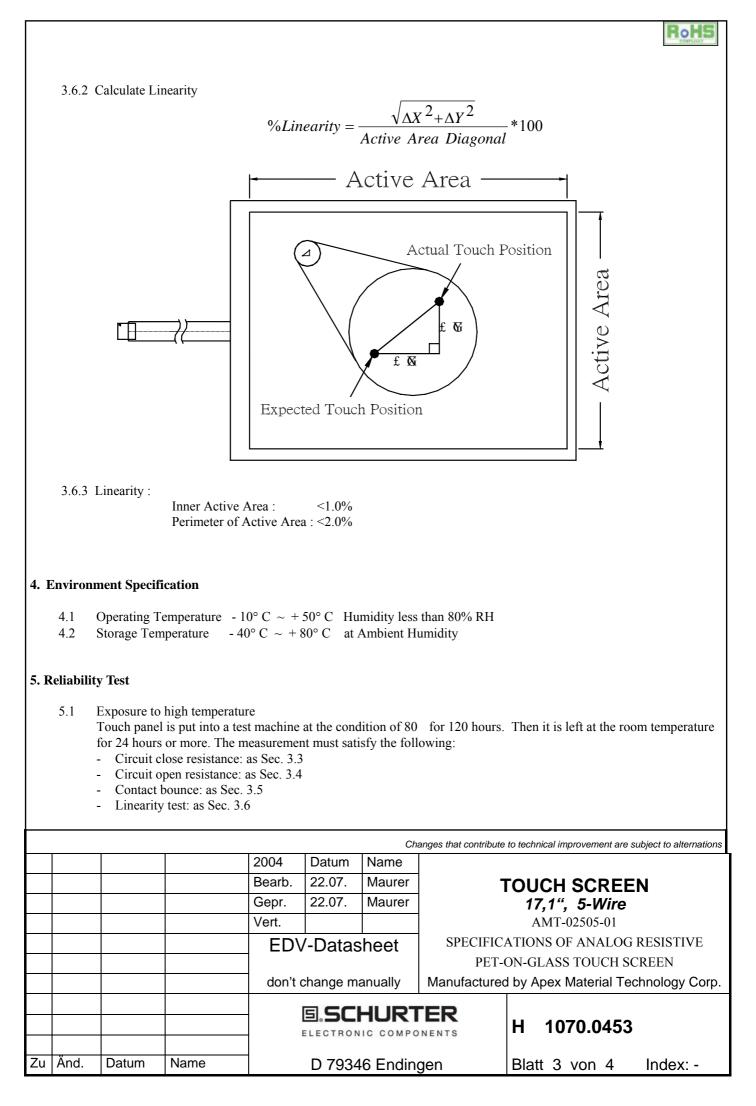

- 2.1 Visible Light Transmission: >80%
- 2.2 Haze: <12%

3. Electrical Specifications

- 3.1 Operating Voltage:
- 3.2 Contact current:
- 3.3 Circuit close resistance:
- 3.4 Circuit open resistance:
- 3.5 Contact bounce:
- 3.6 Linearity Specifications:
- 3.6.1 Inner Active Area : Perimeter of Active Area :

The linearity specifications are based on Hampshire or PenMount touch screen controllers and drivers to define. 10 mm inside of X and Y active area dimensions. The area 10 mm inside of X and Y active area dimensions.

5.2 Exposure to low temperature

Touch panel is put into a test machine at the condition of -40°C for 120 hours.

Then it is left at the room temperature for 24 hours or more. The measurement must satisfy the following:

- Circuit close resistance: as Sec. 3.3
- Circuit open resistance: as Sec. 3.4
- Contact bounce: as Sec. 3.5
- Linearity test: as Sec. 3.6

5.3 Exposure to constant temperature and humidity

Touch panel is put into a test machine at the condition of 50°C, 80%RH for 120 hours. Then it is left at the room temperature for 24 hours or more. The measurement must satisfy the following:

- Circuit close resistance: as Sec. 3.3
- Circuit open resistance: as Sec. 3.4
- Contact bounce: as Sec. 3.5
- Linearity test: as Sec. 3.6

5.4 Thermal Shock

Touch panel is put into a test machine at the condition of -40° C for 30 minutes, and then 80°C for 30 minutes. The process is repeated by 10 cycles. Then it is left at the room temperature for 24 hours or more. The measurement must satisfy the following:

- Circuit close resistance: as Sec. 3.3
- Circuit open resistance: as Sec. 3.4
- Contact bounce: as Sec. 3.5
- Linearity test: as Sec. 3.6

6. Durability test:

6.1 Finger touches

Touch panel is hit 36 millions times with a silicone rubber of R8 finger, hitting rate is by 250g at 2 times per second. The measurement must satisfy the following:

- Circuit close resistance: as Sec. 3.3
- Circuit open resistance: as Sec. 3.4
- Contact bounce: as Sec. 3.5
- Linearity test: as Sec. 3.6

7. Optical Performance:

- 7.1 Optical inspection method and optical defect refer to document Touch Screen Optical Quality Standard.
- 7.2 Outside to Active Area : any optical defected in this area need to be ignored if no effected to touch screen function.
- 7.3 Glass defects such as edge chips and scratches refer to Touch Screen Optical Quality Standard.
- 7.4 Others:

Always store the touch screen in its original shipping container under normal conditions (20~25°C, 65% RH)

Changes that contribute to technical improvement are subject to alternations
