

## LOW-VOLTAGE SUPERVISORY CIRCUIT

### DESCRIPTION

This device was designed to provide all the operational features of the SG1543/2543/3543 devices but with the added advantage of uncommitted inputs to the voltage sensing comparators. This allows monitoring of voltage levels less than 2.5 volts by dividing down the internal reference supply.

In all other respects, the SG1544 series is identical to the SG1543 series. These monolithic devices contain all the functions necessary to monitor and control the output of a sophisticated power supply system. Over-voltage sensing with provision to trigger an external SCR "crowbar" shutdown; an under-voltage circuit which can be used to monitor either the output or sample the input line voltage; and a third op amp/comparator usable for current sensing are all included in this IC, together with an independent, accurate reference generator.

The voltage-sensing input comparators are identical and can be used with threshold levels from zero volts to ( $V_{IN} - 3V$ ). Each has approximately 25mv of hysteresis which is offset so the switching differential threshold is zero on the non-inverting input for rising levels and zero on the inverting input for falling signals. All other operating characteristics are as described in the SG1543 data sheet and application note.

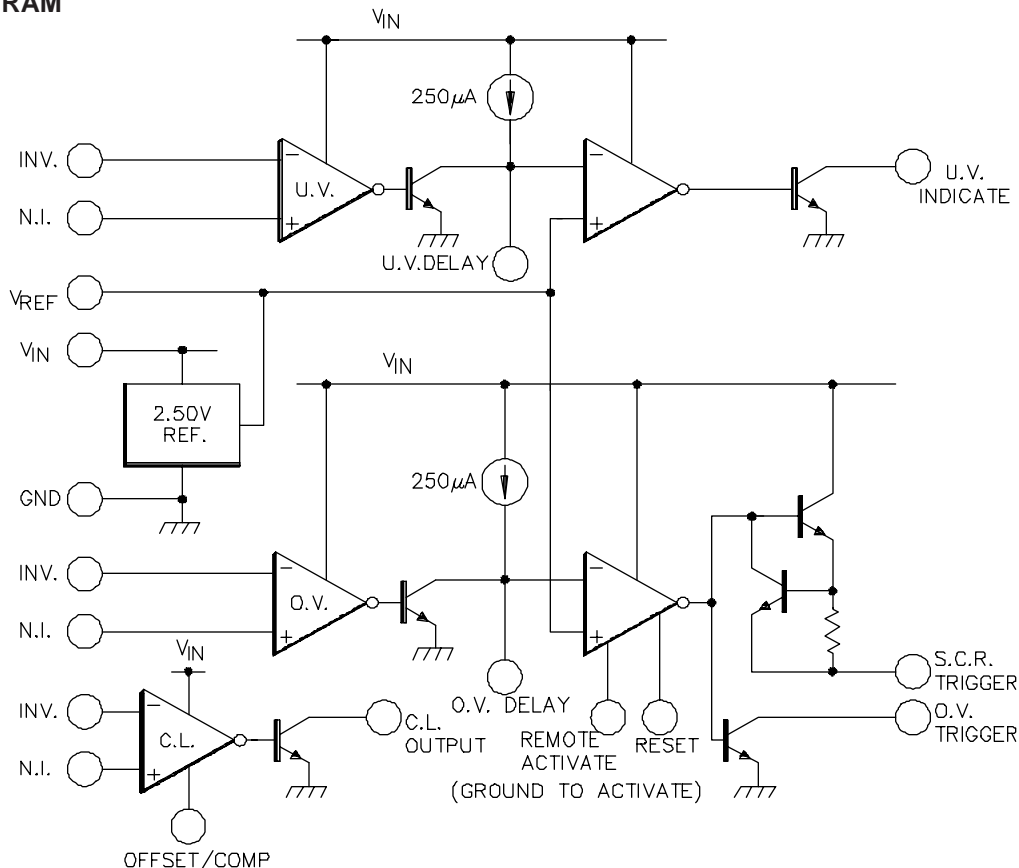

### FEATURES

- Uncommitted comparator inputs for wide input flexibility
- Common-Mode range from zero to near supply voltage
- Reference voltage trimmed to 1% accuracy
- Over-voltage, under-voltage, and current sensing circuits all included
- SCR "Crowbar" drive of 300mA
- Programmable time delays
- Open-collector outputs and remote activation capability
- Total standby current less than 10mA

### HIGH RELIABILITY FEATURES - SG1544

- ◆ Available to MIL-STD-883 and DESC SMD
- ◆ LMI level "S" processing available

### BLOCK DIAGRAM

## ABSOLUTE MAXIMUM RATINGS (Note 1)

Input Supply Voltage (+V <sub>IN</sub> ) .....	40V	Indicator Output Sink Current .....	50mA
Sense Inputs .....	+V <sub>IN</sub>	Operating Junction Temperature	
SCR Trigger Current (Note 2) .....	300mA	Hermetic (J Package) .....	150°C
Indicator Output Voltage .....	40V	Plastic (N, DW Packages) .....	150°C
		Storage Temperature Range .....	-65°C to 150°C

Note 1. Values beyond which damage may occur.

Note 2. At higher input voltages, a dissipation limiting resistor, R<sub>G</sub>, is required. See Figure 1.

## THERMAL DATA

J Package:

Thermal Resistance-Junction to Case, θ <sub>JC</sub> .....	25°C/W
Thermal Resistance-Junction to Ambient, θ <sub>JA</sub> .....	70°C/W

N Package:

Thermal Resistance-Junction to Case, θ <sub>JC</sub> .....	30°C/W
Thermal Resistance-Junction to Ambient, θ <sub>JA</sub> .....	60°C/W

DW Package:

Thermal Resistance-Junction to Case, θ <sub>JC</sub> .....	35°C/W
Thermal Resistance-Junction to Ambient, θ <sub>JA</sub> .....	90°C/W

RoHS Peak Package Solder Reflow (40 sec. max. exp.)...260°C (+0, -5)

Note A. Junction Temperature Calculation:  $T_J = T_A + (P_D \times \theta_{JA})$ .

Note B. The above numbers for θ<sub>JC</sub> are maximums for the limiting thermal resistance of the package in a standard mounting configuration. The θ<sub>JA</sub> numbers are meant to be guidelines for the thermal performance of the device/pc-board system. All of the above assume no ambient airflow.

## RECOMMENDED OPERATING CONDITIONS (Note 3)

Input Supply Voltage (+V <sub>IN</sub> ) .....	4.7V to 40V
Current Limit Common Mode	
Input Voltage Range .....	0V to +V <sub>IN</sub> -3V
Reference Load Current .....	0 to 10mA
Indicator Output Voltage .....	4.7V to 40V
Indicator Output Current .....	0 to 10mA

Delay Timing Capacitor (Note 4) .....
 0 to 1μF |

Operating Ambient Temperature Range	
SG1544 .....	-55°C to 125°C
SG2544 .....	-25°C to 85°C
SG3544 .....	0°C to 70°C

Note 3: Range over which the device is functional.

Note 4: Larger value capacitor may be used with peak current limiting. See Figure 1.

## ELECTRICAL CHARACTERISTICS

(Unless otherwise specified, these specifications apply over the operating ambient temperatures for SG1544 with -55°C ≤ T<sub>A</sub> ≤ 125°C, SG2544 with -25°C ≤ T<sub>A</sub> ≤ 85°C, SG3544 with 0°C ≤ T<sub>A</sub> ≤ 70°C, and +V<sub>IN</sub> = 10V. Indicator outputs have 2kΩ pull-up resistors. All electrical ratings and specifications are tested with the inverting over-voltage input and the non-inverting under-voltage input externally connected to the 2.5V reference. Low duty cycle testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.)

Parameter	Test Conditions	SG1544/2544			SG3544			Units
		Min.	Typ.	Max.	Min.	Typ.	Max.	
<b>Supply Section</b>								
Input Voltage Range	T <sub>J</sub> = 25°C to T <sub>MAX</sub>	4.5		40	4.5		40	V
