

DUAL PERIPHERAL AND POWER DRIVER — TRANSIENT PROTECTED OUTPUTS

www.datasheet4u.com

Dwg. No. A-9789

This "mini-DIP" dual peripheral and power driver is a bipolar monolithic integrated circuit incorporating NOR logic gates, high-current switching transistors, and transient suppression diodes on the same chip. The two output transistors are capable of simultaneously sinking 300 mA continuously at ambient temperatures of up to +70°C. In the OFF state, this driver will withstand at least 80 V.

The UDN5713M dual driver is ideally suited for interface between low-level or high-level logic and high-current/high-voltage loads. Typical applications include driving peripheral loads such as incandescent lamps, light-emitting diodes, memories, and heaters with a load current of up to 600 mA.

The integral transient suppression diodes allow the use of these drivers with inductive loads such as relays, solenoids, or stepping motors without the need for discrete diodes. Similar devices with four drivers per package are the 5703 and 5706.
