Description

These non-diffused lamps are designed to produce a bright light source and smooth radiation pattern. A slight tint is added to the lens for easy color identification. This lamp has been designed with a 20 mil lead frame, enhanced

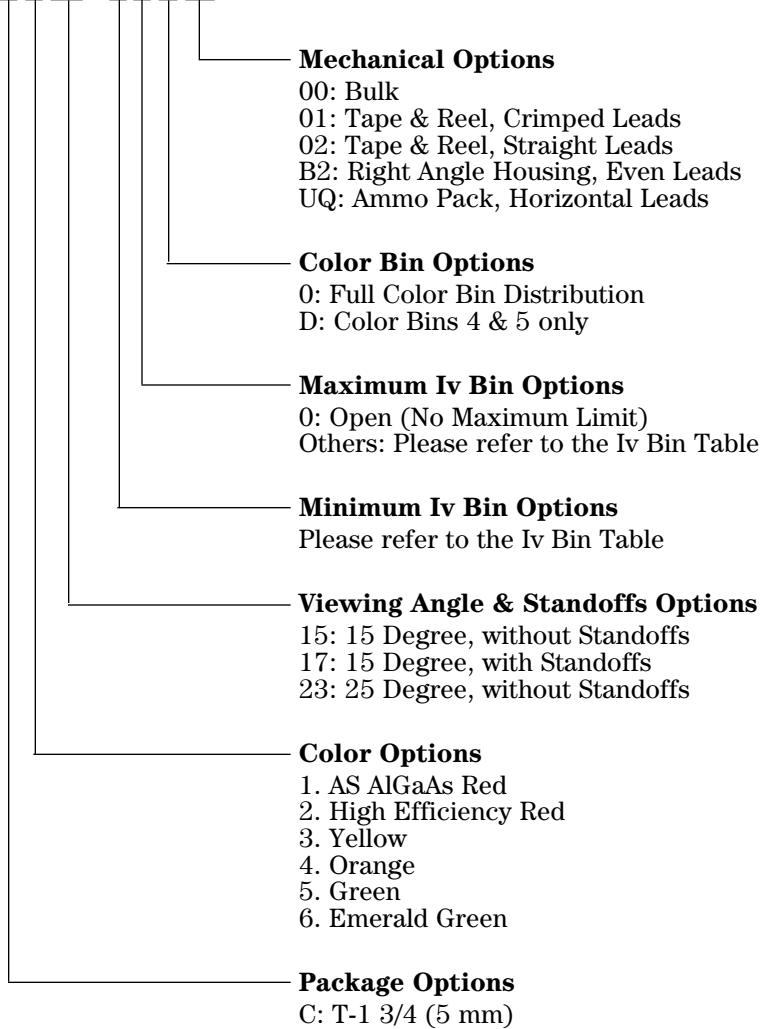

flange, and tight meniscus controls, making it compatible with radial lead automated insertion equipment.

Notes:

1. The luminous intensity, I_v , is measured at the mechanical axis of the lamp package. The actual peak of the spatial radiation pattern may not be aligned with this axis.
2. The dominant wavelength, λ_d , is derived from the CIE Chromaticity Diagram and represents the color of the device.
3. $2\theta_{1/2}$ is the off-axis angle where the luminous intensity is 1/2 the on-axis intensity.
