

DM54ALS240A/DM74ALS240A/DM74ALS241A

Octal TRI-STATE® Bus Driver

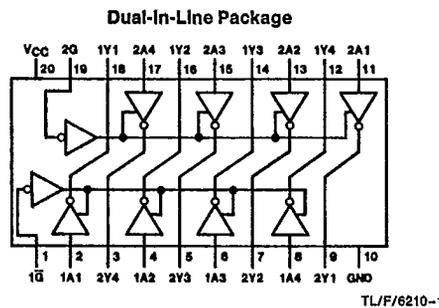

General Description

These octal TRI-STATE bus drivers are designed to provide the designer with flexibility in implementing a bus interface with memory, microprocessor, or communication systems. The output TRI-STATE gating control is organized into two separate groups of four buffers. The ALS240A control inputs symmetrically enable the respective outputs when set logic low, while the ALS241A has complementary enable gating. The TRI-STATE circuitry contains a feature that maintains the buffer outputs in TRI-STATE (high impedance state) during power supply ramp-up or ramp-down. This eliminates bus glitching problems that arise during power-up and power-down.

Features

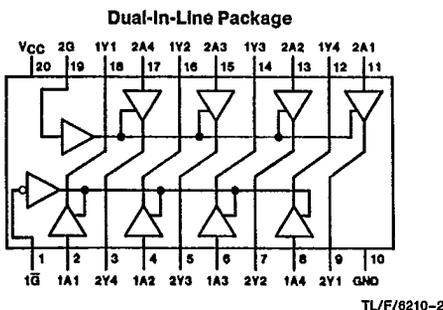

- Advanced low power oxide-isolated ion-implanted Schottky TTL process
- Functional and pin compatible with the DM54/74LS counterpart
- Improved switching performance with less power dissipation compared with the DM54/74LS counterpart
- Switching response specified into 500Ω and 50 pF load
- Switching response specifications guaranteed over full temperature and V_{CC} supply range
- PNP input design reduces input loading
- Low level drive current:
54ALS = 12 mA, 74ALS = 24 mA

Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Typical θ_{JA}
 N Package 60.5°C/W
 M Package 79.8°C/W

Supply Voltage, V_{CC} 7V
 Input Voltage 7V
 Voltage Applied to Disabled Output 5.5V
 Operating Free Air Temperature Range
 DM54ALS -55°C to +125°C
 DM74ALS 0°C to +70°C
 Storage Temperature Range -65°C to +150°C

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
