# Proper Termination for Using HomePNA only Mode

## Application Note

Figure 1 shows the recommended termination resistors in HomePNA mode when the 10BASE-T Ethernet port is not used. The termination is required to reduce the noise injected back to the PCnet™-Home or HomePHY™ device. This noise is created by the

link pulse driven into the open pins of the 10BASE-T port. This implementation also helps to improve the input sensitivity of the HomePNA port.
