Coil data

Available for nominal voltages	12 VDC
Nominal power consumption of the unsuppressed coil at nominal voltage	1.3 W
Test voltage winding/contact	500 VAC _{rms}
Upper limit temperature for the coil	155 °C
Maximum ambient temperature range ¹⁾	- 40 to + 85 °C
Max. switching rate without contact loading	20 Hz
Operate time ²⁾	Typ. 4 msec
Release time ³⁾	Typ. 3 msec

1) See also operating voltage diagram

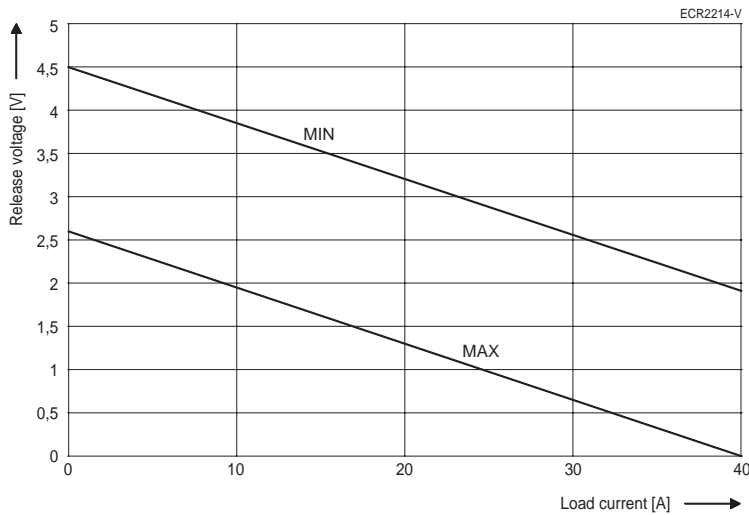

2) Measured at nominal voltage without coil suppression unit

3) Measured with zero volts applied (for unsuppressed relays after having been energized at nominal coil voltage)

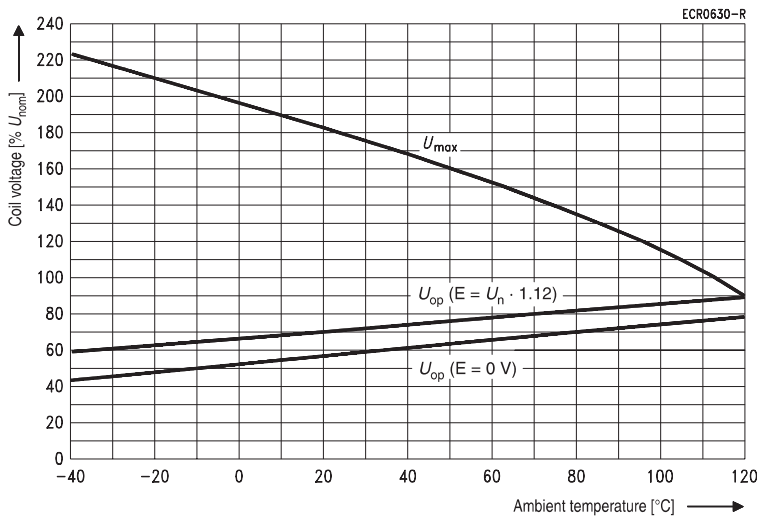

N.B.

A low resistive device in parallel to the relay coil slows the armature movement down and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding.

Operating voltage range

Does not take into account the temperature rise due to the contact current
