100166 9-Bit Comparator

General Description

The 100166 is a 9-bit magnitude comparator which compares the arithmetic value of two 9-bit words and indicates whether one word is greater than, or equal to, the other.

Other functions can be generated by the wire-OR of the outputs. All inputs have 50 kΩ pulldown resistors.

Ordering Code: See Section 6

Logic Symbol

Pin Names	Description
A ₀ –A ₈	A Data Inputs
B ₀ –B ₈	B Data Inputs
A > B	A Greater than B Output
B > A	B Greater than A Output
A = B	Complement A Equal to B Output (Active LOW)

Note 1: Absolute maximum ratings are those values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.**Note 2:** Parametric values specified at -4.2V to -4.8V **Note 3:** The specified limits represent the "worst case" value for the parameter. Since these "worst case" values normally occur at the temperature extremes, additional noise immunity and guard banding can be achieved by decreasing the allowable system operating ranges.**Note 4:** Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.
