

➔ AT18F-DK3 Configurator Programming Kit JTAG In-System Programming (ISP)

The AT18F-DK3 Configurator Programming Kit is a JTAG In-System Programming (ISP) tool to program the Atmel AT18F series FPGA configuration memories (Configurators). This kit provides designers an easy way to program, prototype, and evaluate the Atmel AT18F series Configurators, which are second source low cost replacement parts for the Xilinx® XCFxxS series Platform Flash PROMs. In addition to using this programming kit for the following Atmel AT18F series Configurators, users can also use this DK3 base board with other CPLD daughter boards that can be purchased separately for the programming and development of the Atmel ATF15xxAS/ASV/ASVL/SVL/BE/RE series CPLDs.
