

3-Channel Low-Dropout Constant-Current Parallel LED Driver with Current Setting Resistor

www.datasheet4u.com

General Description

The CP2143, a 3-channel low-dropout constant-current parallel LED driver, can be used to drive white LED, blue LED or any color LED whose forward operating voltage is lower than the battery voltage. The unique Smart-Mirror™ technology is introduced in CP2143, which can guarantee a constant LED current in various operating conditions. Without capacitor or inductor, only one resistor is needed for setting the current of the LEDs. The CP2143 is available in a space-saving Pb-free SOT23-6L package.

SOT23-6L

-40°C~85°C

Features

- 38 μ A supply current, can be powered by a GPIO port low as 2.5V
- LED's current set by external resistor, up to 40mA per channel supported
- Only 150mV dropout voltage needed at 20mA per channel
- LED current matching: $\pm 0.3\%$ (typical)
- PWM dimming control or DC voltage control supported
- Over 90% efficiency can be reached
- No EMI and switch noise
- Thermal shutdown protection
- Shutdown current less than 0.1 μ A

Applications

- Mobile phones
- Digital still camera
- MP3 players
- PDAs
- GPS receivers
- Torches
