DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

1.	SCOPE	
ith.	Scope. This L.Z.I of MIL-ST W devices".	drawing describes device requirements for class B microcircuits in accordance O-883, "Provisions for the use of MIL-STD-883 in conjunction with compliant
1.2	Part number.	The complete part number shall be as shown in the following example:

1.2.1 Device types. The device types shall identify the circuit function as follows:

Device type	Generic number	Circuit function	∆V <sub>OUT</sub> (V)	ΔV <sub>OUT</sub> /ΔT(ppm/°C)
01	LT1021BM-5	5.0 V voltage reference	±.05 V	5.0
02	LT1021CM-5	5.0 V voltage reference	±.005 V	20
03	LT1021DM-5	5.0 V voltage reference	±.05 V	20

1.2.2 Case outline. The case outline shall be as designated in appendix C of MIL-M-38510, and as follows:

Outline letter Case outline G A-1 (8-lead, .370" x .185"), can package

1.3 Absolute maximum ratings.

Input voltage - - - -40 V dc Input-output voltage differential - - - - - - - -35 V dc Output to ground voltage 1/ Trim pin to ground voltage: Positive - - - - - -Equal to  $V_{OUT}$ Negative -20 V dc 10 seconds Indefinite -65°C to +150°C +300°C Lead temperature (soldering, 10 seconds) - - - - -Power dissipation ( $P_D$ ) - - - - - - Thermal resistance, junction-to-case ( $\theta_{JC}$ ): 500 mW Case G - - -See MIL-M-38510, appendix C Junction temperature - - - - - - - - - - - - - -+175°C 1.4 Recommended operating conditions.

Ambient operating temperature range ( $T_A$ ) - - - - - - -55°C to +125°C

1/ Shunt mode current limit.

#### 2. APPLICABLE DOCUMENTS

2.1 Government specification and standard. Unless otherwise specified, the following specification and standard, of the issue listed in that issue of the Department of Defense Index of Specifications and Standards specified in the solicitation, form a part of this drawing to the extent specified herein.

SPECIFICATION

**MILITARY** 

MIL-M-38510 - Microcircuits, General Specification for

STANDARD

MILITARY

MIL-STD-883 - Test Methods and Procedures for Microelectronics

(Copies of the specification and standard required by manufacturers in connection with specific acquisition functions should be obtained from the contracting activity or as directed by the contracting activity.)

- 2.2 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing shall take precedence.
  - 3. REQUIREMENTS
- 3.1 Item requirements. The individual item requirements shall be in accordance with 1.2.1 of MIL-STD-883, "Provisions for the use of MIL-STD-883 in conjunction with compliant non-JAN devices" and as specified herein.
- 3.2 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-M-38510 and herein.
  - 3.2.1 Terminal connections. The terminal connections shall be as specified on figure 1.
  - 3.2.2 Case outline. The case outline shall be in accordance with 1.2.2 herein.
- 3.3 Electrical performance characteristics. Unless otherwise specified, the electrical performance characteristics are as specified in table I and apply over the full ambient operating temperature range.
- 3.4 Marking. Marking shall be in accordance with MIL-STD-883 (see 3.1 herein). The part shall be marked with the part number listed in 1.2 herein. In addition, the manufacturer's part number may also be marked as listed in 6.4 herein.
- 3.5 Certificate of compliance. A certificate of compliance shall be required from a manufacturer in order to be listed as an approved source of supply in 6.4. The certificate of compliance submitted to DESC-ECS prior to listing as an approved source of supply shall state that the manufacturer's product meets the requirements of MIL-STD-883 (see 3.1 herein) and the requirements herein.

(sinking current) <u>3</u> /	, 1 	 	2,3	ATT		   150   	
Supply current (series mode)	Icc		1	All		1.2	mA
(Series mode)	!		2,3	A11		1.5	
Output voltage noise $\frac{4}{}$	N <sub>O</sub>	10 Hz < f <sub>0</sub> < 1.0 kHz,  T <sub>A</sub> = +25°C	! 4 ! ! 4 ! ! !	All		   3.5   	μ <b>V rm</b> s
Long term stability of output voltage 5/	I	  t = 1000 hrs, T <sub>A</sub> = +25°C 	4	A11		60	ppm

Output voltage is measured immediately after turn-on. Changes due to chip warm-up are typically

less than 0.005 percent.
Temperature coefficient is measured by dividing the change in output voltage over the temperature range by the change in temperature. Separate tests are done for hot and cold; -55°C to +25°C, and +25°C to +125°C. Incremental slope is also measured at +25°C. Line and load regulation are measured on a pulse basis. Output changes due to die temperature

change must be taken into account separately. Package thermal resistance is 150°C/W.

4/ RMS noise is measured with a 2-pole high pass filter at 10 Hz and a 2-pole low pass filter at 1 kHz. The resulting output is full wave rectified and then integrated for a fixed period, making the final reading an average as opposed to rms. Correction factors are used to convert from average to rms and to correct for the non-ideal bandpass of the filters.

5/ Guaranteed if not tested to the limits specified.

DESC FORM 193A SEP 87

☆U.S. GOVERNMENT PRINTING OFFICE: 1987 748-129-60913

- 3.6 Certificate of conformance. A certificate of conformance as required in MIL-STD-883 (see 3.1 herein) shall be provided with each lot of microcircuits delivered to this drawing.
- 3.7 Notification of change. Notification of change to DESC-ECS shall be required in accordance with MIL-STD-883 (see 3.1 herein).
- 3.8 Verification and review. DESC, DESC's agent, and the acquiring activity retain the option to review the manufacturer's facility and applicable required documentation. Offshore documentation shall be made available onshore at the option of the reviewer.
  - 4. QUALITY ASSURANCE PROVISIONS
- 4.1 Sampling and inspection. Sampling and inspection procedures shall be in accordance with section 4 of MIL-M-38510 to the extent specified in MIL-STD-883 (see 3.1 herein).
- 4.2 Screening. Screening shall be in accordance with method 5004 of MIL-STD-883, and shall be conducted on all devices prior to quality conformance inspection. The following additional criteria shall apply:
  - a. Burn-in test, method 1015 of MIL-STD-883.
    - (1) Test condition A, B, C, or D using the circuit submitted with the certificate of compliance (see 3.5 herein).
    - (2)  $T_A = +125^{\circ}C$ , minimum.
  - b. Interim and final electrical test parameters shall be as specified in table II herein, except interim electrical parameter tests prior to burn-in are optional at the discretion of the manufacturer.
- 4.3 Quality conformance inspection. Quality conformance inspection shall be in accordance with method 5005 of MIL-SID-883 including groups A, B, C, and D inspections. The following additional criteria shall apply.
  - 4.3.1 Group A inspection.
    - a. Tests shall be as specified in table II herein.
    - b. Subgroups 5, 6, 7, 8, 9, 10, and 11 in table I, method 5005 of MIL-STD-883 shall be omitted.
  - 4.3.2 Groups C and D inspections.
    - a. End-point electrical parameters shall be as specified in table II herein.
    - b. Steady-state life, test method 1005 of MIL-STD-883 conditions:
      - (1) Test condition A, B, C, or D using the circuit submitted with the certificate of compliance (see 3.5 herein).
      - (2)  $T_A = +125^{\circ}C$ , minimum.
      - (3) Test duration: 1,000 hours, except as permitted by method 1005 of MIL-STD-883.

### TABLE II. Electrical test requirements.

MIL-STD-883 test requirements	Subgroups   (per method   5005, table I)
Interim electrical parameters (method 5004)	
Final electrical test parameters (method 5004)	1*, 2, 3, 4
Group A test requirements (method 5005)	1, 2, 3, 4
Groups C and D end-point electrical parameters (method 5005)	1

\* PDA applies to subgroup 1.

#### 5. PACKAGING

5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-M-38510.

#### 6. NOTES

- 6.1 Intended use. Microcircuits conforming to this drawing are intended for use when military specifications do not exist and qualified military devices that will perform the required function are not available for OEM application. When a military specification exists and the product covered by this drawing has been qualified for listing on QPL-38510, the device specified herein will be inactivated and will not be used for new design. The QPL-38510 product shall be the preferred item for all applications.
- 6.2 Replaceability. Microcircuits covered by this drawing will replace the same generic device covered by a contractor-prepared specification or drawing.
- $6.3\,$  Comments. Comments on this drawing should be directed to DESC-ECS, Dayton, Ohio 45444, or telephone 513-296-5375.
