THYRISTOR/ THYRISTOR

NEWADD-A-pak™ Power Modules

Features

- Electrically isolated: DBC base plate
- 3500 V_{RMS} isolating voltage
- Standard JEDEC package
- Simplified mechanical designs, rapid assembly
- Auxiliary cathode terminals for wiring convenience
- High surge capability
- Wide choice of circuit configurations
- Large creepage distances
- UL E78996 approved

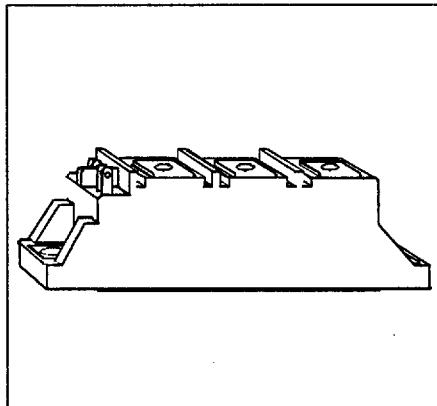

75 A
95 A

Description

These IRKU/V series of NEW ADD-A-paks use power thyristors in two circuit configurations. The semiconductor chips are electrically isolated from the base plate, allowing common heatsinks and compact assemblies to be built. They can be interconnected to form single phase bridges (IRKU+IRKV) or 6-pulse midpoint connection bridge. These modules are intended for general purpose high voltage applications such as high voltage regulated power supplies, battery charge and DC motor speed control circuits.
