

# RazerThin® LEDs

## CxxxRT290-S0200

Cree's RazerThin LEDs are a new generation of solid-state LED emitters that combine highly efficient InGaN materials with Cree's proprietary G•SiC® substrate to deliver superior price/performance for high-intensity blue and green LEDs. These vertically structured LED chips are approximately 95 microns in height and require a low forward voltage. Cree's RazerThin series chips have the ability to withstand 1000V ESD. Applications for RazerThin LEDs include next-generation keypad backlighting where sub-miniaturization and thinner form factors are required.

### FEATURES

- Thin 95  $\mu\text{m}$  Chip
- Reduced Forward Voltage
  - 3.2 V Typical at 20 mA
- RazerThin LED Performance
  - 460nm - 3.8-11.1 mW
  - 470nm - 3.4-10.4 mW
  - 505nm - 2.0-6.5 mW
  - 527nm - 1.7-6.0 mW
- Single Wire Bond Structure
- Class 2 ESD Rating

### APPLICATIONS

- Mobile Phone Key Pads
  - White LEDs
  - Blue LEDs
  - Green LEDs
- Cellular Phone LCD Backlighting
- Digital Camera Flash For Mobile Appliances
- Automotive Dashboard Lighting
- LED Video Displays
- Audio Product Display Lighting

**Notes:**

- Maximum ratings are package dependent. The above ratings were determined using a T-1 3/4 package (with Hysol OS4000 epoxy) for characterization. Seller makes no representations regarding ratings for packages other than the T-1 3/4 package used by Seller. The forward currents (DC and Peak) are not limited by the G•SiC die but by the effect of the LED junction temperature on the package. The junction temperature limit of 125°C is a limit of the T-1 3/4 package; junction temperature should be characterized in a specific package to determine limitations. Assembly processing temperature must not exceed 325°C (< 5 seconds).
- Product resistance to electrostatic discharge (ESD) is measured by simulating ESD using a rapid avalanche energy test (RAET). The RAET procedures are designed to approximate the maximum ESD ratings shown. Seller gives no other assurances regarding the ability of Products to withstand ESD.
- All products conform to the listed minimum and maximum specifications for electrical and optical characteristics when assembled and operated at 20 mA within the maximum ratings shown above. Efficiency decreases at higher currents. Typical values given are the average values expected by Seller in large quantities and are provided for information only. Seller gives no assurances products shipped will exhibit such typical ratings. All measurements were made using lamps in T-1 3/4 packages (with Hysol OS4000 epoxy). Dominant wavelength measurements taken using Illuminance E.
- Specifications are subject to change without notice.

## Standard Bins for CxxxRT290-S0200

All LED chips are sorted onto die sheets according to the bins shown below. All dominant wavelength and radiant flux values are specified at  $I_f = 20 \text{ mA}$ .

## Characteristic Curves

These are representative measurements for the RazerThin products. Actual curves will vary slightly for the various radiant flux and dominant wavelength bins.
