

NJM2068

The NJM2068 is a high performance, low noise dual operational amplifier. This amplifier features popular pin-out, superior noise performance, and superior total harmonic distortion. This amplifier also features guaranteed noise performance with substantially higher gain-bandwidth product and slew rate which far exceeds that of the 4558 type amplifier. The specially designed low noise input transistors allow the NJM2068 to be used in very low noise signal processing applications such as audio preamplifiers and servo error amplifier.

Absolute Maximum Ratings

Supply Voltage	V^+/V^-	$\pm 18V$
Input Voltage (note)	V_{IC}	$\pm 15V$
Differential Input Voltage	V_{ID}	$\pm 30V$
Power Dissipation	P_D (D-Type)	500mW
	(M,E-Type)	300mW
	(L-Type)	800mW
Operating Temperature Range	T_{opr}	$-20 \sim +75^\circ C$
Storage Temperature Range	T_{stg}	$-40 \sim +125^\circ C$

(note) For supply voltage less than $\pm 15V$, the absolute maximum input voltage is equal to the supply voltage.
