

### 3-TERMINAL 1A POSITIVE ADJUSTABLE REGULATOR

The KIA317P/PI is adjustable 3-terminal positive voltage regulator capable of supplying in excess of 1.5A over a 1.2V to 37V output range.

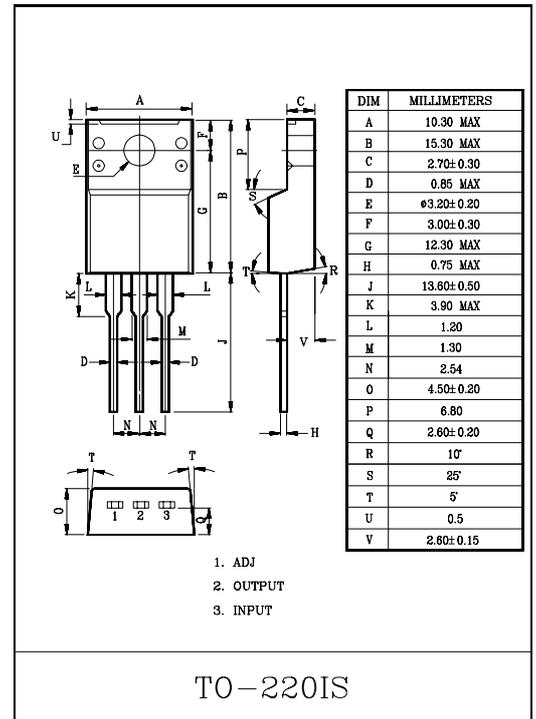

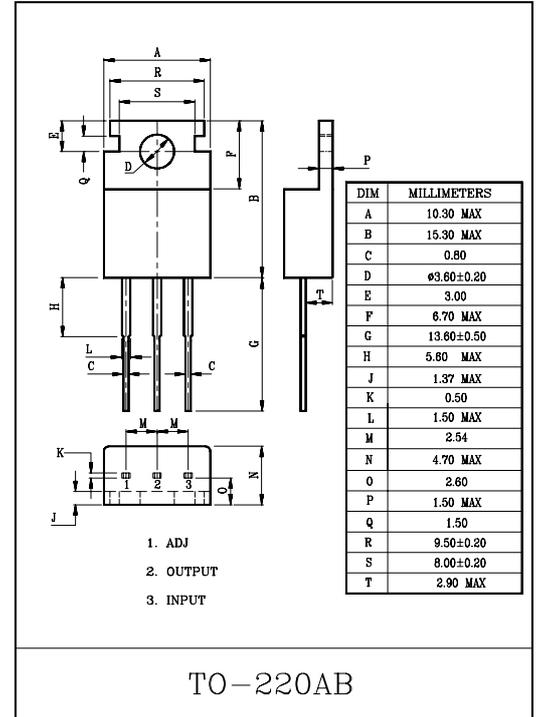

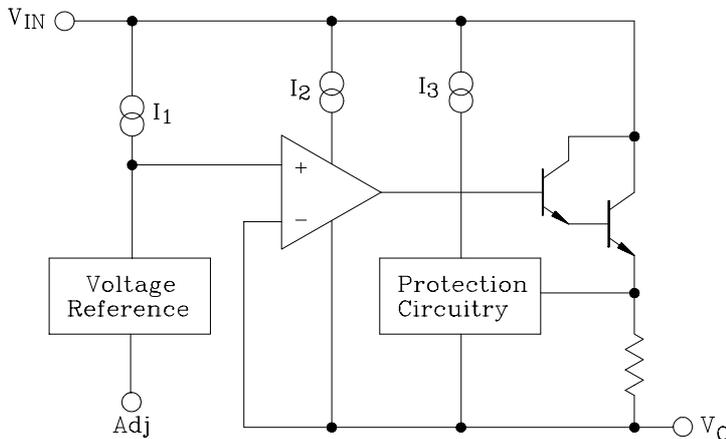

This is exceptionally easy to use and require only two external resistors to set the output voltage.

Further, both line and load regulation are better than standard fixed regulators.

#### FEATURES

- Adjustable output between 1.2V and 37V
- Guaranteed 1.5A output current
- Line regulation typically 0.001%/V
- Load regulation typically 0.1%
- 80dB ripple rejection (with  $C_{adj}$ )
- Internal thermal overload protection
- Internal short-circuit current limiting
- Output transistor safe-area compensation

## TYPICAL APPLICATION (PROGRAMMABLE REGULATOR)

$$V_{out} = 1.25V \left(1 + \frac{R_2}{R_1}\right) + I_{Adj} R_2$$

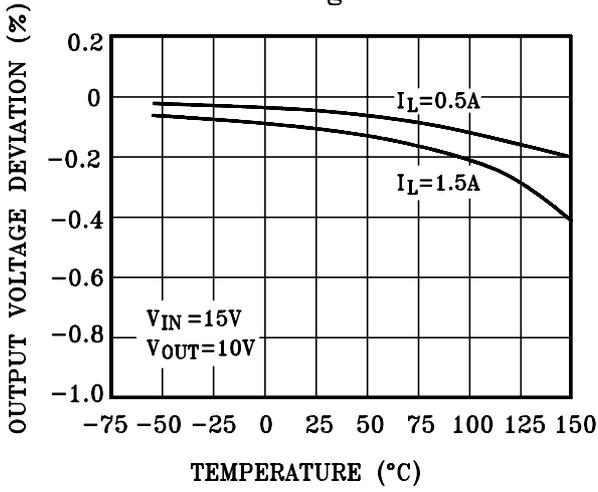

$C_i$  is required when regulator is located an appreciable distance from power supply filter.

$C_o$  is not needed for stability, however, in the range of  $1\mu F$  to  $100\mu F$  of aluminum or tantalum electrolytic are commonly used to provide improved output impedance and rejection of transients.

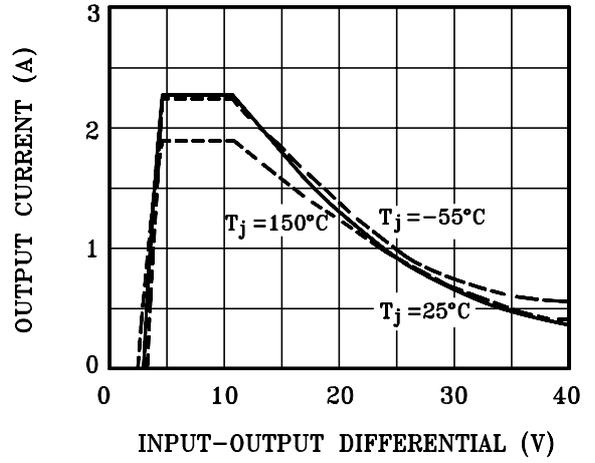

Since  $I_{Adj}$  is controlled to less than  $100\mu A$ , the error associated with this term is negligible in most applications.
