

**SiGe 900 MHz GSM Low-Noise Amplifier with Gain Control**
**Features**

- 925-960 MHz operation for GSM applications
- Low power, single 2.8 volt supply
- Gain control feature with 0, 17, and 25 dB gain settings
- 40 dB of reverse isolation at all gain settings
- Standby Mode with less than 20  $\mu$ A current consumption
- Compact MSOP-8L package
- High IIP3 and low noise meet demanding system requirements

**Applications**

- GSM portable transceivers

**Figure 1. IBM43RCLNA1115 Low Noise Amplifier**

**Description**

The IBM43RCLNA1115 is a gain-controlled low-noise amplifier (LNA) implemented using IBM Microelectronics Silicon Germanium (SiGe) technology.

The LNA is designed for low power consumption and uses a 2.8 volt power supply. It is optimized for GSM applications that require amplifiers with very high reverse isolation such as direct conversion where the LNA is more susceptible to local oscillator leakage.

The IBM43RCLNA1115 is programmable for three levels of gain, and it has a very low power standby mode.

The inputs for gain control and standby mode are 3V CMOS compatible.

External capacitors in series with the input and output are required for DC blocking and as part of the impedance matching networks. A series inductor on the input and a shunt inductor on the output are also part of the matching

network. Proper selection of these components ensures optimized LNA performance in the desired band.

Specifications in this data sheet were obtained using the circuit in the IBM evaluation board for this product.

**Ordering Information**

To order samples of the LNA or an evaluation board, contact an IBM sales representative or distributor. Regional contact information is located on the IBM Microelectronics Division web site at:

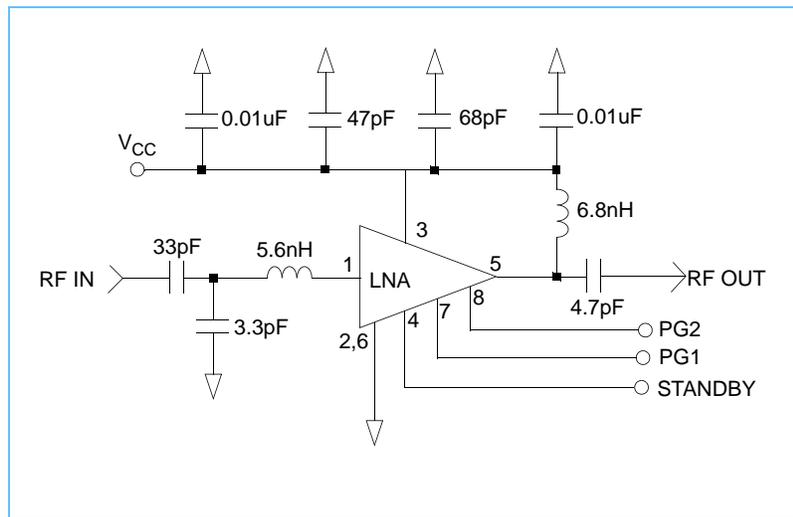

[www.ibm.com/chips/support/howtobuy.html](http://www.ibm.com/chips/support/howtobuy.html)

| Part Number        | Product  |
|--------------------|--|
| IBM43RCLNA1115     | SiGe 900 MHz GSM Low-Noise Amplifier with Gain Control |
| IBM43RCLNA1115EVBA | 900 MHz LNA Evaluation Board                           |

**Note:** The low noise amplifier is susceptible to damage from electrostatic discharge (ESD). Observe normal ESD precautions at all times.
