

DESCRIPTION

The SG78xxA/SG78xx series of positive regulators offer self contained, fixed-voltage capability with up to 1.5A of load current and input voltage up to 50V (SG78xxA series only). These units feature a unique on-chip trimming system to set the output voltages to within $\pm 1.5\%$ of nominal on the SG78xxA series, $\pm 2.0\%$ on the SG78xx series. The SG78xxA versions also offer much improved line and load regulation characteristics. Utilizing an improved bandgap reference design, problems have been eliminated that are normally associated with the Zener diode references, such as drift in output voltage and large changes in the line and load regulation.

All protective features of thermal shutdown, current limiting, and safe-area control have been designed into these units and since these regulators require only a small output capacitor for satisfactory performance, ease of application is assured. Although designed as fixed-voltage regulators, the output voltage can be increased through the use of a simple voltage divider. The low quiescent drain current of the device insures good regulation when this method is used. Product is available in hermetically sealed TO-257 (both case grounded 'G' and isolated 'IG'), TO-3, TO-39 and LCC packages.

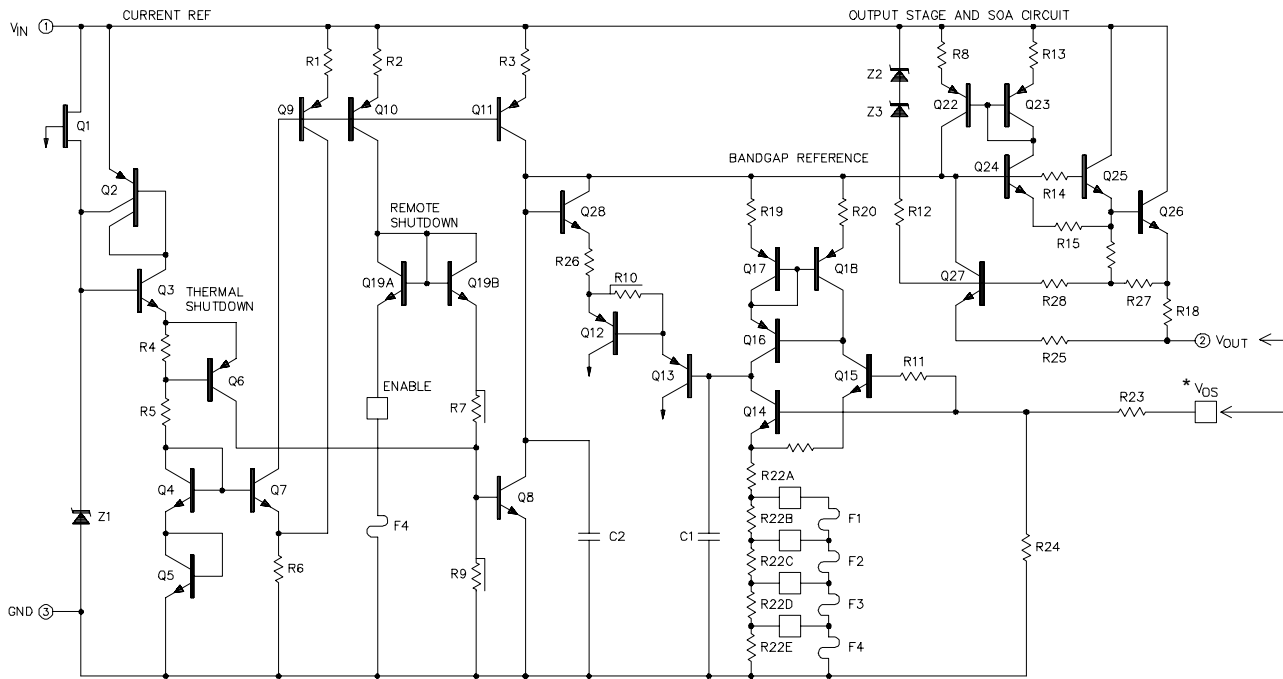

IMPORTANT: For the most current data, consult MICROSEMI's website: <http://www.microsemi.com>

KEY FEATURES

- Output Voltage Set Internally to $\pm 1.5\%$ on SG78xxA
- Input Voltage Range to 50V max. on SG78xxA
- Two Volt Input-Output Differential
- Excellent Line and Load Regulation
- Foldback Current Limiting
- Thermal Overload Protection
- Voltages Available: 5V, 12V, 15V
- Contact Factory for Other Voltage Options
- Available in Surface Mount Package

HIGH RELIABILITY FEATURES - SG78xxA/78xx

- Available to MIL-STD - 883, ¶ 1.2.1
- MIL-M38510/10702BXA - JAN7805T
- MIL-M38510/10703BXA - JAN7812T
- MIL-M38510/10704BXA - JAN7815T
- MIL-M38510/10706BYA - JAN7805K
- MIL-M38510/10707BYA - JAN7812K
- MIL-M38510/10708BYA - JAN7815K
- Radiation Data Available
- MSC-AMSG level "S" Processing Available
- Available to DSCC
- Standard Microcircuit Drawing (SMD)

PRODUCT HIGHLIGHT
SCHEMATIC DIAGRAM

* For normal operation the (V_{OS}) sense pin must be externally connected to the load.

ABSOLUTE MAXIMUM RATINGS

Device Output Voltage	Input Voltage	Input Voltage (Transient)(Note 3)	Input Voltage Differential (Output Shorted to Ground)
5V	35V	50V	35V
12V	35V	50V	35V
15V	35V	50V	35V

Operating Junction Temperature150°C
 Storage Temperature Range-65°C to 150°C
 Lead Temperature (Soldering 10 seconds)300°C

Note: Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of specified terminal.

Note 3: Operation at high input voltages is dependent upon load current. When load current is less than 5mA, output will rise out of regulation as input-output differential increases beyond 30V. Note also from figure 1, that maximum load current is reduced at high voltages. The 50V input rating of the SG78xxA series refers to ability to withstand high line or transient conditions without damage. Since the regulator's maximum current capability is reduced, the output may fall out of regulation at high input voltages under nominal loading.

THERMAL DATA
K TO-3 3-Terminal Metal Can (Two pins and case)

THERMAL RESISTANCE-JUNCTION TO CASE, θ_{JC}	3.0°C/W
THERMAL RESISTANCE-JUNCTION TO AMBIENT, θ_{JA}	35°C/W

T TO-39 3-Pin Metal Can

THERMAL RESISTANCE-JUNCTION TO CASE, θ_{JC}	15°C/W
THERMAL RESISTANCE-JUNCTION TO AMBIENT, θ_{JA}	120°C/W

G TO-257 3-Pin Hermetic

THERMAL RESISTANCE-JUNCTION TO CASE, θ_{JC}	3.5°C/W
THERMAL RESISTANCE-JUNCTION TO AMBIENT, θ_{JA}	42°C/W

IG TO-257 3-Pin Hermetic (Isolated)

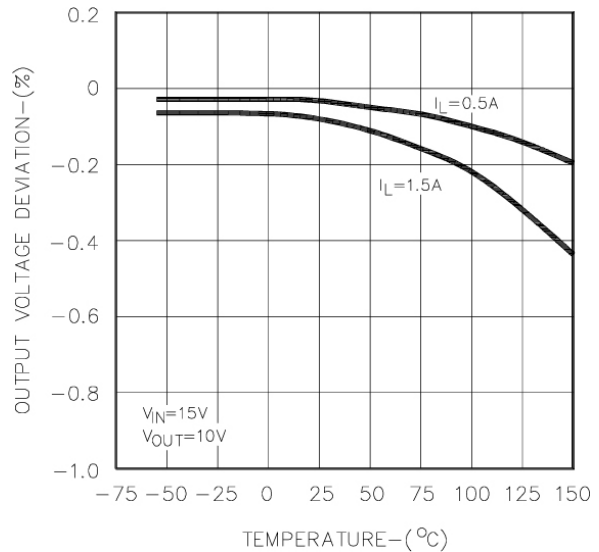

THERMAL RESISTANCE-JUNCTION TO CASE, θ_{JC}	4.0°C/W
THERMAL RESISTANCE-JUNCTION TO AMBIENT, θ_{JA}	42°C/W

L Leadless Chip Carrier 20-Pin Ceramic

THERMAL RESISTANCE-JUNCTION TO CASE, θ_{JC}	35°C/W
THERMAL RESISTANCE-JUNCTION TO AMBIENT, θ_{JA}	120°C/W

Junction Temperature Calculation: $T_J = T_A + (P_D \times \theta_{JA})$.

The θ_{JA} numbers are guidelines for the thermal performance of the device/pc-board system. All of the above assume no ambient airflow.

RECOMMENDED OPERATING CONDITIONS

Parameter	SG78xx / 78xxA			Units
	Min	Typ	Max	
Operating Junction Temperature Range (Note 2)	55		150	°C

Note 2: Range over which the device is functional.

ELECTRICAL CHARACTERISTICS

Unless otherwise specified, these specifications apply over the operating ambient temperatures for SG7805A / SG7805 with $-55^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$, $V_{IN} = 10\text{V}$, $I_O = 500\text{mA}$ for the K, G and IG – Power Packages, $I_O = 100\text{mA}$ for the T and L packages, $C_{IN} = 0.33\mu\text{F}$, and $C_{OUT} = 0.1\mu\text{F}$. Low duty cycle pulse testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.

Parameter	Test Conditions	SG7805A			SG7805			Units
		Min	Typ	Max	Min	Typ	Max	
Output Voltage	$T_J = 25^{\circ}\text{C}$	4.92	5.00	5.08	4.80	5.00	5.20	V

Description

Key Features:

- Output voltage set internally to $\pm 1.5\%$ on SG7800A
- Input voltage range to 50V max. on SG7800A
- Two volt input-output differential
- Excellent line and load regulation
- Foldback current limiting
- Thermal overload protection
- Voltages available: 5V, 12V, 15V
- Available in surface mount package

Package

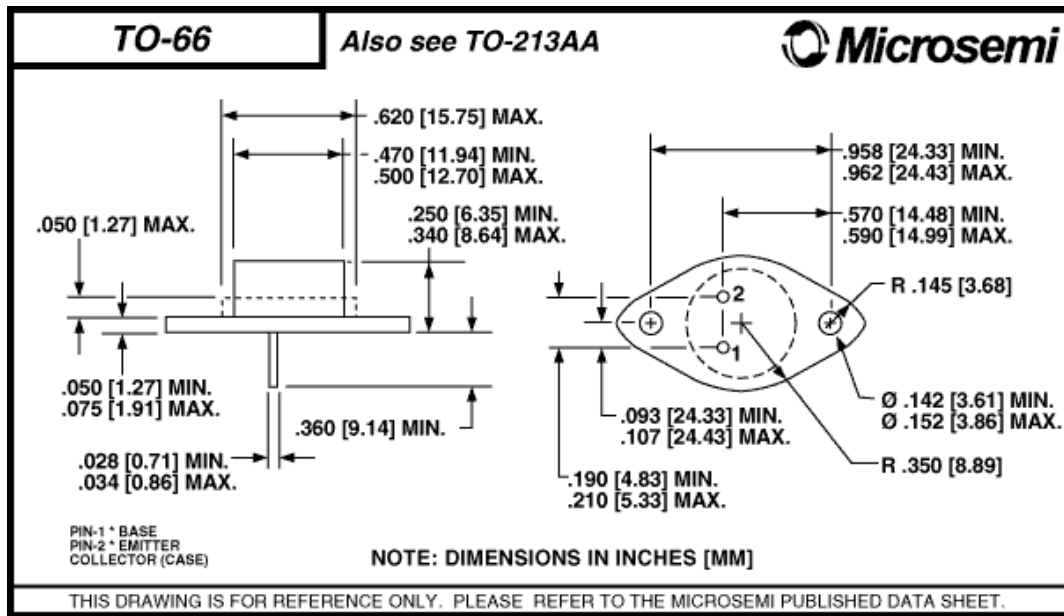

The SG7800A/SG7800 series of positive regulators offer self contained, fixed-voltage capability with up to 1.5A of load current and input voltage up to 50V (SG7800A series only). These units feature a unique on-chip trimming system to set the output voltages to within 1.5% of nominal on the SG7800A series, 2.0% on the SG7800 series. The SG7800A versions also offer much improved line and load regulation characteristics. Utilizing an improved Bandgap reference design, problems have been eliminated that are normally associated with the Zener diode references, such as drift in output voltage and large changes in the line and load regulation.

All protective features of thermal shutdown, current limiting, and safe-area control have been designed into these units and since these regulators require only a small output capacitor for satisfactory performance, ease of application is assured.

Although designed as fixed-voltage regulators, the output voltage can be increased through the use of a simple voltage divider. The low quiescent drain current of the device insures good regulation when this method is used.

Product is available in hermetically sealed TO-257, TO-3, TO39 and LCC packages.

Maximum Electrical Rating	Symbol	Max	Unit
Output Current	I_{OUT}	1.5	A
Output Voltage	V_{OUT}	15	V
Differential Voltage (Output Shorted to Ground)	V_{DIFF}	35	V
Input Voltage	V_{IN}	35	V
