

**MAXIM****Low-Power,  
Monolithic, CMOS Analog Multiplexers****General Description**

Maxim's MX7501/7502/7503 are low-power, monolithic, CMOS analog multiplexers. The MX7501 is a single-ended, 8-channel (1-of-8) multiplexer, while the MX7502 is a differential, 4-channel (2-of-8) multiplexer. The MX7503 is identical to the MX7501, except the enable logic is inverted (channels are on with Enable low). These devices are plug-in upgrades for the industry-standard "7501/7502/7503": the MX7501/7502/7503 consume significantly less power (6mW Max) and offer a wider operating range of power-supply voltages (a single supply of +10V to +30V, or dual supplies of  $\pm 5V$  to  $\pm 18V$ ). The MX7501/7502/7503 also feature Maxim's standard latchup-proof construction, and they are both TTL and CMOS compatible.

**Applications**

- Control Systems
- Data Logging Systems
- Aircraft Heads-Up Displays
- Data Acquisition Systems
- Signal Routing
- Portable Equipment

## Low-Power, Monolithic, CMOS Analog Multiplexers

### ABSOLUTE MAXIMUM RATINGS

V+ to GND .....	+18V	Power Dissipation (Any Package)	
V- to GND .....	-18V	Up to +50°C .....	1000mW
V Between Any Switch Terminals (Note 1) .....	25V	Derate above +50°C by .....	10mW/°C
Digital Input Voltage Range .....	V+ to GND	Operating Temperature	
Max Overvoltage at VOUT (Vs) .....	V-, V+	MX750_JN/KN/C/D .....	0°C to +70°C
Switch Current (Is, Continuous 1 Channel) .....	20mA	MX750_JQ/KQ .....	-40°C to +85°C
Switch Current (Is, Surge 1 Channel, 1ms Duration, 10% Duty Cycle) .....	35mA	MX750_SQ/SE .....	-55°C to +125°C
		Storage Temperature .....	-65°C to +150°C

**Note 1:** Do not apply voltages higher than V+ and V- to any other terminal, especially when V- = V+ = 0V, all other pins should be at 0V.

**Note 2:** The digital control inputs are diode protected; however, permanent damage may occur on unconnected units under high-energy electrostatic fields. Keep unused units in conductive foam at all times.

Stresses listed under "Absolute Maximum Ratings" may be applied (one at a time) to devices without resulting in permanent damage. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**Note 3:** JN/KN versions specified for 0°C to +70°C; JQ/KQ versions for -40°C to +85°C; SQ/SE versions for -55°C to +125°C.

**Note 4:** A pull-up resistor, typically 1-2kΩ is required to make the J version compatible with TTL/DTL. The maximum value is determined by the output leakage current of the driver gate when in the high state.

**Note 5:** AC parameters are sample tested to ensure conformance to specifications.

The technical drawing illustrates the physical dimensions of the CERDIP package. The top view shows the overall width (D), height (A), lead spacing (Q), lead thickness (L), and lead length (L1). The side view provides a cross-sectional look at the lead profile, with dimensions E1, E, and B1, and a note indicating a 0°-15° lead angle from the vertical. Below the drawing, two views of the package body are shown, labeled S1 and S.
