## Description

The H7805A series of three terminal positive Regulators are available in the TO-220 package and with several fixed output voltages, making them useful in a wide range of applications. Each type employs internal current limiting, Thermal shut down and safe operating area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. Although designed primarily as fixed voltage regulator, these devices can be used with external components to obtain adjustable voltages and currents.

## Features

- Output current up to 1A
- Output Voltages of 5V
- Thermal Overload Protection
- Short Circuit Protection
- Output Transistor Safe Operating Area Protection

## Absolute Maximum Ratings (T<sub>a</sub>=25°C)

V<sub>I</sub>—Input Voltage (for V<sub>O</sub>=5V to 18V)..... 35V

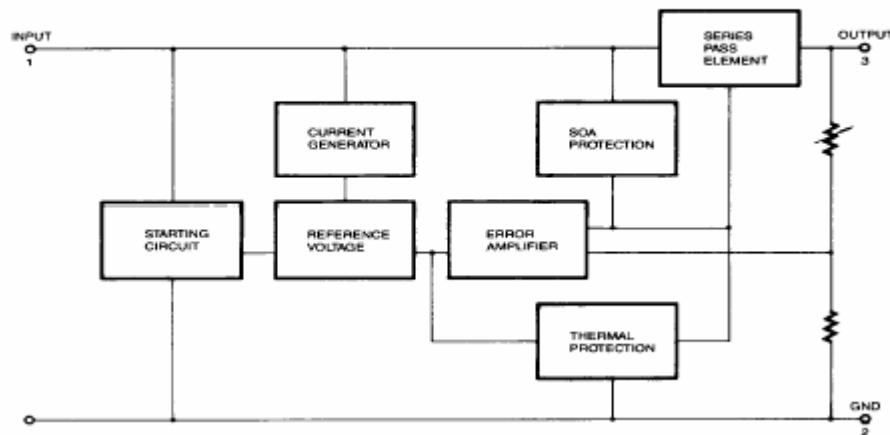

R<sub>JC</sub>—Thermal Resistance Junction-Cases..... 5 °C/W

R<sub>JA</sub>—Thermal Resistance Junction-Air..... 65 °C/W

T<sub>OPR</sub>—Operating Temperature Range..... 0~125

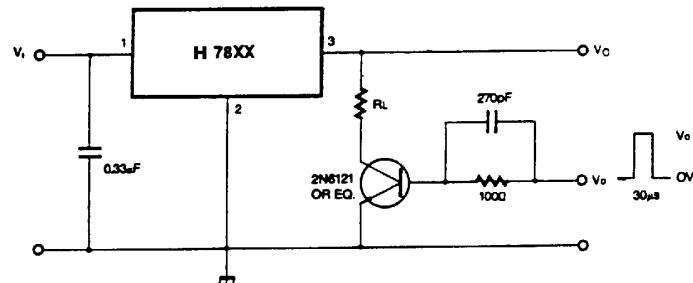

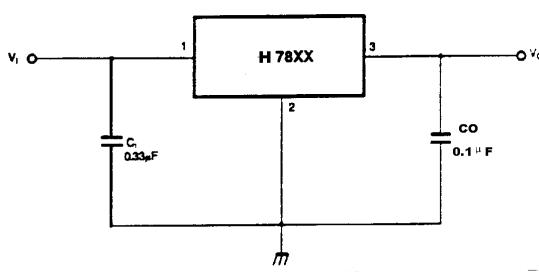

T<sub>STG</sub>—Storage Temperature Range..... -65~150

**Typical Applications**

1. DC Parameters

3. Ripple Rejection

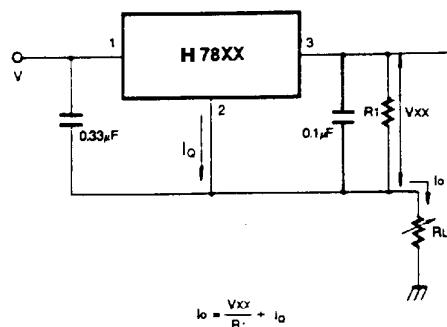

2. Load Regulation

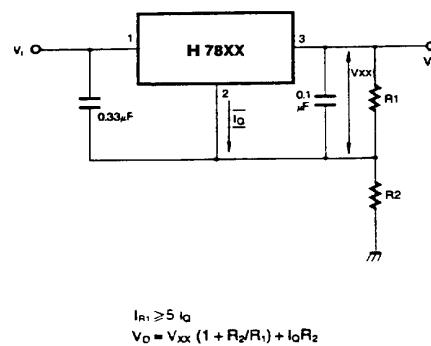

4. Fixed Output Regulator

**Notes:**

- (1) To specify an output voltage, substitute voltage value for "XX." A common ground is required between the input and the Output voltage. The input voltage must remain typically 2.0V above the output voltage even during the low point on the input ripple voltage.
- (2) Ci is required if regulator is located an appreciable distance from power Supply filter.
- (3) Co improves stability and transient response.
