**PRODUCT DESCRIPTION**

The LM78L05 is a three-terminal Positive Voltage Regulator, offered in 5 Volt and Adjustable versions. These devices are an excellent choice for use in logic systems, instrumentation, Hi-fi, and other solid state electronic equipment. The LM78L0X is used as a Zener diode/resistor combination with the option of adjustable voltage at any voltage. In case the internal power dissipation gets high for the heat sink, the thermal shutdown circuit takes over and prevents the IC from overheating . The LM78L05 is offered in 3-pin TO-92 and TO-220 packages compatible with other 5V regulators.
