## Description

The Intersil ACS161MS is a Radiation Hardened 4-Bit Binary Synchronous Counter. The  $\overline{\text{MR}}$  is an active low master reset.  $\overline{\text{SPE}}$  is an active low Synchronous Parallel Enable which disables counting and allows data at the preset inputs (P0 - P3) to load the counter. CP is the positive edge clock. TC is the terminal count or carry output. Both TE and PE must be high for counting to occur, but are irrelevant to loading. TE low will keep TC low.

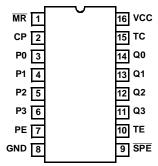

The ACS161MS utilizes advanced CMOS/SOS technology to achieve high-speed operation. This device is a member of a radiation hardened, high-speed, CMOS/SOS Logic family.

The ACS161MS is supplied in a 16 lead Ceramic Flatpack (K suffix) or a Ceramic Dual-In-Line Package (D suffix).

- 1. The TC output is High when TE is High and the counter is at Terminal Count (HHHH).
- 2. The High-to-Low transition of PE or TE should only occur while ZCP is High for conventional operation.
- 3. The Low-to-High transition of SPE should only occur while CP is High for conventional operation.
- 4. The TC output is High when TE is High and the counter is at Terminal Count (HHHH).
